CHAPTER 1 – GETTING STARTED

1.1 Installing Billings	1
1.2 Billings Configuration	5
1.3 Suite Administration	7
1.4 Billings Administration	11

1.1 INSTALLING BILLINGS

1.1.1 Billings in the cloud

Open the application from within InEight Platform. Platform’s primary function is to let you connect and share data between all InEight applications involved in managing a project. This allows project management workflows to pass between jobsite, field office, and front office seamlessly in a consistent and standardized user interface.

Billings in the Cloud

1. Select a project, and then select **Billings** from the Main menu.
If you are using the legacy Billings application, click the installer download link distributed to you via email by your local administrator.

2. If you are using Billings for the first time, select **Download**, and then select **Next** (or **Open**) to start the one-time Billings Launcher download.

3. If prompted, complete the log in to the applications through your company's log in portal.
4. The InEight Billings launch page opens, and you can begin using Billings in the cloud.

1.1.2 Billings Legacy

The Billings application is launched by double-clicking the application icon placed on your system desktop by the installer, after completing the application download via the URL provided to you by your administrator. After the application is launched, the login dialog box may open if you have access to multiple companies, otherwise the application will start.

If this is the first time you are running Billings, you will be prompted to complete the log in process using your company's log in portal.

A screenshot of the InEight Billings login dialog box. The title bar says "Login". On the left is the InEight Billings logo. The form contains three input fields: "Account:" with a blurred text field, "Password:" with an empty text field, and "Company:" with a dropdown menu showing "Billings Internal" and a small icon to its right. At the bottom are "OK" and "Cancel" buttons.

Verify that the company you are logging into is correct, and then select **OK**.

When a new version of Billings is available, by your system administrator, you will get a message when you attempt to log into the system. Click **Download** to update the version. You will not be able to access Billings without installing the updated version.

1.1.3 Updating Billings

When a new version of Billings is available, the system will display a message indicating that an update is available when you attempt to run the application. Click the **Download** link on the prompt to launch your browser, and then click **Launch Billings** to update the version. You will not be able to access Billings without installing the updated version.

1.2 BILLINGS CONFIGURATION

1.2.1 Application Configuration

The Billings application is configured to meet your specific business requirements, which is typically accomplished when Billings is initially configured by the implementation specialist. However, multiple options still exist for the system administrator to adjust the application as business needs change over time.

Configuration and system maintenance include any of the following functions:

- Drop-down value lists
- Custom field definitions
- System integration schedules
- Billings mobile application rendering configuration

The term **maintaining** in this context means adding new values, editing existing values, or removing no longer needed values.

1.2.2 Utilizing the System Configuration

Go to Suite Administration > **System Configuration**.

Only System Administrators will have access to configure the application.

The System Configuration page opens as a new tab with the Field Setup sub-tab selected. This Field Setup tab lets the Administrator create custom fields for any entity which contains a Details tab. Custom fields are primarily created for master data-related entities, found in the Data Library menu, but can also be used for the Projects and Timesheets.

 A screenshot of the 'Field Setup' page. It shows a table of custom fields with columns for Target, Name, Type, and Scope. The table is organized into expandable sections for different entities.

Target	Name	Type	Scope
Target Company (Count=3)			
Company	Email	Text	All
Company	GET No.	Text	All
Company	WBS No.	Text	All
Target Cost Code - Global (Count=1)			
Cost Code - Global	Cost Code	Date	All
Target Cost Code - Project Specific (Count=1)			
Cost Code - Project Specific	Cost Code	Text	All
Target Equipment (Count=1)			
Equipment	HR Resource Owner	Personnel	All
Target Personnel (Count=3)			
Personnel	Laptop Brand	Yes/No	All
Personnel	Cell Phone Brand	Yes/No	All
Personnel	Laptop ID	Text	All
Target Project (Count=11)			
Project	Travel Allowance Transfer?	Yes/No	All
Project	Project Location/ID	Text	All
Project	WBS No.	Text	All
Project	Client Ref. No.	Text	All
Project	(Company) Approval	Text	All
Project	Client Approval	Text	All
Project	Top Code	Text	All
Project	Top Units	Decimal	All
Project	WBS Name	Text	All
Project	Client Invoice Mapping	Text	All

To add a new custom field, click the **Add Row** ribbon bar button. The following entities support custom fields:

- Cost Code – Global
- Personnel
- Cost Code – Project Specific
- Project and WBS items
- Personnel Classification
- Material
- Equipment
- Material Classification
- Equipment Classification

- Region
- Division
- Time Sheet
- Company

Using the drop-down list, you can select which of the Billings entities to add a custom field to and then type in the name for the new custom field in the Name column.

You can click the drop-down list for the Type column and then select how you want the data displayed (such as, Date, Text, MRU Text, Personnel, Yes/No, Integer, or Decimal).

For certain entities, such as Project, you can also configure the “Scope”, that is, whether the custom field applies to the entire project entity, to the Project only, or to the WBS items contained within the project.

To delete any of the custom fields, you can highlight the item and click the Delete Row(s) button from the home ribbon menu.

When complete, you can click the **Apply** button, or to exit the dialog box, you can either click the **OK** button along the bottom right-hand side to save your changes and exit or click Cancel to exit without saving changes.

1.3 SUITE ADMINISTRATION

1.3.0.1 User Management

To access user information from the Main menu, click Suite Administration > **User Management**. Only an Administrator can access the Suite Administration or the User Management functionality.

The User Management tab opens listing all users in the system.

When new users are added through Platform, they are automatically created in Billings as a standard user, provided the appropriate suite and application access is granted through the InEight suite Roles and Permissions. User authentication is performed through the customer’s Active Directory or Google security validation, including any MFA requirements, therefore no Billings-specific password is

required. Once a user exists in the system, the Administrator can enlist the user in Billings user types and groups, as well as grant the user access to one or more regions. You can open a user record to define its settings by double clicking on the user from the list.

You must have a status of *Active*, be a member of at least one security role, and have access to at least one Region before the system will allow you to complete the login process.

1.3.0.2 Permissions Tab

As an administrator of the system, you control the type of functional access the user will have and can restrict access to data by region utilizing the Permissions tab. Roles allow you to control which functions of the system the user will be able to utilize. More than one Role can be associated with a user. Regions allow the Administrator to control which data in the system the user will be able to see or operate on, as constrained by the Role membership defined above.

1.3.0.3 System Processes Tab

On the System Processes tab, you can control the types of imports, exports, and adjustments the user can execute. To grant access to any process, check it off using the check box located next to the process description.

Select the **OK** or **Apply** button to save any changes. This will return you to the main User Management tab.

1.3.0.4 Regions

Regions are used to manage what users can see within Billings. If a user has permission to a Region, they can see all resources, rate tables, projects, time sheets, LEMs, and Invoices associated to the Regions they have permission for.

1.4 BILLINGS ADMINISTRATION

1.4.1 User Account Management Information

There are thirteen user roles or groups in Billings and five specialized roles for more security control. A single application user can be a member of one or more roles, which determines the functional areas of the application that they have access to. The following defines the thirteen groups:

User Role	User Role Definition
Administrator	The user designated as the technical application lead within the system. This role manages the application security and users interaction with the system through user groups. Members of this group can perform all functions on all pages.
Power User	User designated as the highest privileged user for their own region. This role manages the setup of Billings and how it will affect reporting, payroll, and integrations, and ensures the application is aligned to client requirements.
Report Administrator	User who has a deep understanding of Billings as well as the technical knowledge to build reports using the Billings report manager. This role can be used as a standalone for someone who only needs to access the report manager to build reports or can be used in addition to any other role that needs access to the report manager.
LEM Approver/Reviewer	A user who can approve LEMs. This role is unable to create, edit, or delete LEMs, but they can complete all functions (except crediting an invoice) that take place after a LEM is created
User	User designated as having a higher skill set with capabilities to set up information in Billings as needed.
Time sheet Entry	User designated as having limited involvement in setting up information in Billings.
User (No Rates)	User level access to Billings except for access to rates information on rate tables, time sheets, and reports.
Supervisor (View Only)	User designated to have view only and report generating rights in the application.
Imports User	User who is monitoring or performing imports into Billings. This role can be used standalone for someone who only needs to access these functions or can be used in addition to any other role that needs access to perform imports.
Certification Power User	User who manages the overall tracking of certification information, such as someone in HR or a corporate safety officer. This role can be used standalone for someone who only needs to access the certification module or can be used in addition to any other role that

User Role	User Role Definition
Certification User (Read Only)	<p>needs access to the certification module.</p> <p>User who only requires access to the certification information but is not authorized to make changes, such as a Project Manager or Supervisor. This role can be used stand alone for someone who only needs to access the certification module, or can be used in addition to any other role that needs access to the certification module.</p>
Project Accountant	User who manages running data exports and adjusting exported data.

Specialized User Role	Specialized User Role Definition
Share Layouts	Gives a user the ability to share their personalized layouts with other users. The members of this role cannot administrate layouts for others, only their own.
Expanded Time sheet Editing	<p>Gives a user the ability to edit or delete export batches (including LEMs and Invoices) created by other users, if the user has the right to create one or more Export batches themselves. This means they will be able to edit/delete batch results created by other users for types that they have access to already. Note that this functionality is already available to all Power Users and Administrators. This specialized security role simply gives the ability to edit or delete export results batches created by other users, and removes Approval Status restrictions, elevating these rights to be equivalent to the Power User role (but NOT the Administrator role).</p>
Expanded Export Editing	Gives a user the ability to edit or delete timsheets created by other users. This means they will be able to edit/delete timesheets created by other users . Note that this functionality is already available to all Power Users and Administrators. This specialized security role simply gives the ability to edit or

Specialized User Role	Specialized User Role Definition
	delete timesheets by other users, and removes Approval Status restrictions, elevating these rights to be equivalent to the Power User role (but NOT the Administrator role).
Restricted Export Editing	Gives a user the ability to edit or delete export batches created by other users, if the user has the right to create one or more Export batches themselves (that is, they will be able to edit/delete batch results created by other users for types that they have access to already). Unlike the Expanded Export Editing above, this role does NOT allow users any added rights over the Approval Status.
Mobile User (for use with the standalone client only)	User cannot use the desktop system, but can capture personal time sheets using the mobile client
Mobile Foreman (for use with the standalone client only)	User cannot use the desktop system but can capture attendance and time sheets for themselves and their crews using the mobile client. This only applies to stand-alone mobile customers.

CHAPTER 2 – HELP MENU

2.1 Help Options	15
------------------------	----

2.1 HELP OPTIONS

2.1.1 Contact Billings Support

If Billings Support is needed, click the **Help** icon and select **Contact InEight Billings Support**.

A blank e-mail to support@ineight.com will be opened using the default email application installed on the desktop. You can enter in a full description of the issue including the following details:

- What user is having the issue
- Screenshots of the error and the window it is occurring in
- The time sheet #, LEM# and/or the Invoice #
- If it's an error with a report, what report it is, and what parameters were used when requesting the report.
- User contact information (e.g., Phone number, e-mail address)

2.1.2 Verifying Billings Version Info

To find the application version information for Billings, go to Help > **System Info**.

The following window appears providing details on the version and the Billings website link.

Click **OK** at the bottom of this window to exit.

2.1.3 Refresh Cache

The Refresh Cache function allows the users to trigger a complete refresh of the locally cached reference data. This includes, named resources, list of vendors and suppliers, classifications (trade and craft) and category and type equivalent in Platform.

This page intentionally left blank.

CHAPTER 3 – NAVIGATION

3.1 Billings Navigation	18
3.2 Filter Functionality	21
3.3 Utilizing Layout Management	23

3.1 BILLINGS NAVIGATION

3.1.1 Navigation Menu

When opening Billings, the navigation list is collapsed. To view the menu items for navigating through Billings, there are 2 options:

Option 1: Expand the menu by clicking the double arrow at the top left corner of the Billings window, as shown in the image below. This will expand the menu to provide the name for each menu grouping; you can then click the down arrow to open the list of items within each grouping (alternatively, click the up arrow to collapse the grouping list).

Option 2: With your mouse, hover over the icon to see the grouping name, then click the desired icon to provide you with the list of the items within that grouping.

3.1.2 OK, Apply, and Cancel Buttons

You will notice the OK, Apply, and Cancel buttons are available on most of the Billings data maintenance pages. Pressing Cancel exits the page and discards any changes that you have made. The functionality of the OK and Apply buttons differs slightly depending on whether you are creating a new record or modifying an existing record. In both cases, pressing either of the buttons saves your changes to the database. However, if you are adding a new record, pressing Apply not only saves the data to the database, but also refreshes the page to let you enter yet another record. Clicking OK saves the data but then exits the page. This is to maximize the data entry speed by allowing you to add multiple new records without needing to exit the page.

List / Grid Modification

If there are columns that you do not require, you can remove them with the following steps:

1. Select the column header by clicking and holding the mouse button down.
2. Drag it downwards until you see an “X” appear.
3. Drop it by releasing the mouse button and the column will be removed.

4. Repeat this step for all the columns you would like removed.

Perform the following steps if you would like to retrieve a removed column or any other columns which may not be visible by default.

1. Right click anywhere on the column header row to bring up a pop-up menu.
2. Select Column Chooser. A Customization window opens.
3. Click and hold the mouse button on the field you require.
4. Drag and drop the field to the column position where you would like it to appear on the grid.

You have to drop it in the header section of the page.

3.2 FILTER FUNCTIONALITY

When opening a page within Billings which contains a grid, an auto-filter feature is available. This feature is available with pages containing the following data:

- Timesheet
- LEM
- Invoice
- Project
- Rate Table
- Company
- Cost Code
- Equipment
- Personnel
- Region
- Division

Each of these pages includes a row directly under the column header row dedicated to filtering. In this row, you can narrow the list by entering in specific criteria (e.g., T/S Number, LEM number, Project Name, etc.). A filter icon appears in each column header when the mouse is placed over the column. If

a filter is activated, the icon is highlighted. If the filter icon is clicked, the filter can be automatically adjusted by selecting from the options of Custom, Blanks, or Non-blanks.

Edit Filters

In the bottom right corner of the page, you can select the Edit Filter button to adjust the default filter settings.

1. Select **Edit Filter**.

2. Click the **And** button to select any of the following options:

- And
- Or
- Not And
- Not Or

3. Click the **Plus** button beside the And button to select one of these options:

- Add Condition
- Add Group

Within this row, each character can be edited.

Another option when retrieving data is the Quick-Type feature. This lets a user open an existing list and begin typing in the first characters of the word. Billings will automatically begin to filter the list by these characters. The example below is searching LEM Numbers by the letter s. Billings will display all LEMs beginning with this character.

3.3 UTILIZING LAYOUT MANAGEMENT

To access the Layout Manager from the Main menu, select Suite Administration > **Layout Management**.

Only System Administrators will have access to configure the layouts for other users.

The Layout Management page appears. The Layout Management tool is user specific. This means any layouts listed in the window are layouts the logged-in user has previously created and saved through the various page’s Layout ribbon bar functionality, or layouts that have been shared with this user.

From the General tab, you can view the available layouts and delete any layouts that are no longer required. To delete a layout, highlight the line item by clicking on it, then click the **Delete Row(s)** icon located on the ribbon menu.

Click the View tab to view the basic outline of the selected layout. Any changes made to the layout from this preview will not be saved; this is strictly for viewing purposes. All changes must be done from the page to which the layout applies.

If you are viewing a time sheet layout, you must be in the time sheet page to change the layout

Click **Apply** or **OK** on the bottom right to exit the Layout Management window.

CHAPTER 4 – DATA LIBRARY

- 4.1 Classifications 26
- 4.2 Create a new Personnel Classification 26
- 4.3 Create a new Equipment Classification 28
- 4.4 Create a new Material Classification 31
- 4.5 Calendars and Holidays 32
- 4.6 Time bumping 35
- 4.7 Resources 38
- 4.8 Create new Personnel resources 38
- 4.9 Create a new Equipment Resource 43
- 4.10 Create new material resource 46
- 4.11 Create a Location 49
- 4.12 Create a new Division 51
- 4.13 Create new Company (Client or Supplier) 54
- 4.14 Managing Companies (Vendors) 58

4.1 CLASSIFICATIONS

4.2 CREATE A NEW PERSONNEL CLASSIFICATION

Billings will receive all operational resources associated to personnel, including Trade and Craft lists, from InEight Platform. Both Trade and Craft will populate the Personnel Classification library. However, it may be necessary or desirable to add additional classifications or organize the Trade and Craft items received from Platform into a deeper structured format.

Create a new Personal Classification

1. Open the Data Library menu item and select Classifications > **Personnel**.

2. The Personnel Classification tab appears. This tab lets users view all records and create new or edit existing personnel classifications that were configured for billing purposes.

3. Right click the **Personnel (Emp)** icon and select **Add Classification** from the dialog box or click the Add button located just above the list of classifications.

4. On the General tab, enter the Description and Code. The Status field automatically defaults to *Active* and the Parent field is grayed out and will automatically default to the appropriate parent node from the classification tree.

5. You can create classification structures by dragging and dropping individual classifications into other classifications, building up a tree or folder-like structure. This lets you group classifications.

6. Click the **Details** tab. This section is used to capture custom field values.

7. Click **Apply** or **OK** at the bottom of the page to save your changes.

4.3 CREATE A NEW EQUIPMENT CLASSIFICATION

Billings will receive all operational resources associated to equipment including the Equipment Category and Types lists from Platform. Both Category and Type will populate the Equipment Classification library. However, it may be necessary or desirable to add additional classifications or organize the Category and Type items received from Platform into a deeper structured format.

4. In the General tab, enter the **Description** and **Code**.

5. Click the Details tab. This section is used to capture custom field values. Populate any custom fields per your organization's requirements.

6. Click **Apply** or **OK** at the bottom of the page to save your changes.

4.4 CREATE A NEW MATERIAL CLASSIFICATION

Create a new Material Classification

1. Go to Data Library > Classifications and then **Material**.

2. The Materials Classification tab appears. This tab lets you view and edit all material classifications currently in the system.

3. Right click the Material and select **Add Classification** from the resulting menu or click the **Add** button located in the page's ribbon menu.

4. In the General tab, enter the **Description** and **Code**.

5. Click the **Details** tab. This section is used to capture custom field values. Populate any custom fields per your organization requirements.

6 . Click **Apply** or **OK** at the bottom of the page to save your changes.

4.5 CALENDARS AND HOLIDAYS

Calendars define statutory holidays that apply during a project's life cycle. These holidays directly affect time bumping calculations, especially weekly straight-time thresholds if the stat weekly thresholds are defined. Stat holidays can reduce the number of straight-time (ST) hours allowed in a week. For example, Standard weekly ST threshold being 40 hours compared to a stat holiday week with only 32 hours.

The calendar you assign determines when these reduced thresholds apply.

You must set up the calendar before configuring time bumping.

Default Calendar

A default Canada calendar is available which gives you access to the following:

- Use it as-is for Canadian projects
- Copy and modify it for locations with different statutory holiday dates
- Create entirely new calendars for other countries

Calendar Fields

When creating or editing a calendar, you must define the following fields:

- Code - A unique identifier for the calendar.
- Description - A clear explanation to describe the calendar.
- Country - The country the calendar applies to.
- Holiday Rows - The list of statutory holidays.
- Holiday Dates - The specific dates those holidays occur.

Create a calendar

1. Go to Data Library > Classifications > **Calendars**
2. In the menu, select **Add Row**.

The screenshot shows the 'Calendars' table in the Billings software. The ribbon at the top includes an 'Add Row' button, which is highlighted with a red box. The table below has the following data:

Name	Code	Country	Province/State
Canada	CAN	Canada	British Columbia
Canada - Including weekends	CAN_WEEKENDS	Canada	British Columbia
Billings empty calendar	Billings - Empty calendar		
Billings weekend calendar	Billings - Weekend calendar		
Test	10	United States	ARIZONA
Copy of Canada	CAN_3	Canada	British Columbia

- Complete the fields for the calendar. Enter a name, code, country, state and status.

- To add a holiday, select **Add Row**.
- Enter the date and holiday name
- Select **Add Row** as needed to add more holidays.
- Click **Apply** to save your changes or click **OK** to save your changes and close the dialog box.

Copy an existing calendar

Instead of creating a new calendar, you can copy an existing calendar that is similar and make changes to it.

- From the main calendar screen, select the calendar you want to copy.
- Select the **Copy** option from the menu options.

3. A copy of the calendar is shown in the list. Double-click in the row for the calendar to open it and make changes.

4. Click **Apply** to save your changes or click **OK** to save your changes and close the dialog box.

4.6 TIME BUMPING

Time bumping lets you automatically redistribute hours into straight time (ST), overtime (OT), double time (DT) and Double Time and a half (DTH), based on rules you configure. You configure the rules in the Billings Data Library and then enable and apply them at the project level.

4.6.1 Time Bumping configurations

All time bumping rules are managed in the Billings Data Library menu. Configurations are at the organizational level which can be reused across multiple sites.

You can add new configurations, copy and paste existing configurations, and set configurations as inactive.

Key Configuration Elements

Each configuration includes the following:

Title	Action / Description
Name and Description	Provide a name and code for the configuration so you can easily identify and reuse it.
Calendar	Select a calendar that determines how holidays are handled. You can use the default Canada calendar or create custom calendars for different countries or provinces.
Daily Maximums	<p>You can define how many hours fall into each category per day:</p> <ul style="list-style-type: none"> • Max Daily ST- for example, 8 hours. • Max Daily OT- for example, 2 hours. • Max Daily DT- Any remaining hours after ST or OT • Max Daily DTH - Any remaining hours after DT. If the rules defined for ST, OT, and DT do not handle additional hours defined, all hours that do not fit the thresholds defined in ST, OT and DT will be placed in the DTH hours bucket.
Weekly Straight-Time Threshold	Defines how many straight-time hours are allowed per week when no stat holiday exists. 40 hours for example.
Weekly Straight-Time threshold (Stat week)	If a statutory holiday exists during the week, you can lower the weekly straight-time cap from 40 to 32 hours for example.
Optional Weekly OT/DT Thresholds	You can set weekly caps for overtime and double time. Although these are rarely used, these options are available if your business rules require them.

4.6.1.1 Project (Site) Setup

Time bumping is not automatic; it must be enabled at the project level. Sites are project specific and connect directly to Billings.

In the sites Time Bumping tab, you can:

- Enable time bumping for the project
- Set the week start date
- Select the default time bumping configuration

4.6.1.2 Personnel Types and Exceptions

Personnel types come from your organization-wide configurations in Suite Administration. They are part of each resource profile and determine which time bumping rule applies to that person.

When you enable time bumping at the site level, you can set exceptions by personnel type. For each personnel type, you can either exclude them from time bumping or assign a different configuration than the project default. For example, if someone is tagged as an employee in their resource profile, their hours follow the configuration assigned to the employee personnel type.

If salaried employees shouldn't be bumped, you can set the employee personnel type to **no time bumping**.

Apply time bumping

1. Go to Project administration >**Sites**.
2. Chose the Site and select the **Time Bump** tab.

3. Select the **Enable time bumping** option
4. Select the start day of the week

5. Select the time bumping configuration from the drop-down
6. Click **Ok** or **Apply**

Create new Process for Time Bumping

Time bumping is not automatic. You must request it after making sure timesheet hours already exist in Billings for the target week.

1. Go to Process>Adjustments >**Time bump**.
2. Select the **Create Process** option.
3. Select the project.
4. Select the start date (This determines the Sunday-Saturday week range).
5. Add a description.
6. Select **Submit**.

After the request is submitted, the system applies the configured rules to all timesheets for that week.

If changes to timesheets have occurred after the process was originally generated, a new process can be generated to correct timesheets and can be ran as many times as required to update hours as changes are made.

4.7 RESOURCES

4.8 CREATE NEW PERSONNEL RESOURCES

Billings will receive all operational resources associated to personnel from the Master Data Library within Platform.

Create a new Personnel resource

1. To create an additional resource, that will be used for purposes of customer billing only, go to Data Library > Resources > **Personnel**.

2. The Personnel Resources tab appears. Click the **Add Row** icon on the ribbon bar.

3. The Personnel window opens. Enter the employee’s last and first name in the appropriate fields.

4. Assign a personnel code in the Code field.

The Code must be unique within the database. As a best practice use your organization’s internal code for the individual.

The screenshot shows a 'Personnel' form with the following fields and options:

- General tab selected
- Last Name: [Text Field]
- First Name: [Text Field]
- Code: [Text Field]
- Source: [Dropdown Menu]
- Billing Classification: [Dropdown Menu]
- Cost Classification: [Dropdown Menu]
- Company: [Dropdown Menu]
- Region: [Dropdown Menu]
- Payroll Status: [Dropdown Menu]
- Shift: [Dropdown Menu, currently set to 'Day']
- Status: [Dropdown Menu, currently set to 'Active']
- Shift Rotation: [Dropdown Menu]
- Notes: [Text Area]
- Created: [Text Field]
- Modified: [Text Field]
- Buttons: OK, Cancel, Apply

5. Click the drop-down arrow on the field labeled Source. This field lets you label the resource as a subcontractor, employee, third party or any other description previously set up by the system administrator.

The screenshot shows the 'Source' dropdown menu open, displaying the following options:

- Subcontractor
- Employee
- DSP
- Third Party
- FAC

6. Click the ellipsis (three dots) icon in the Billing Classification field. A Classification dialog box appears. Select the Employee’s classification by double clicking on it.

You can use the Search feature at the top of the pop-up to search for the classification using either the name or the code.

7. The Cost Classification field will replicate the classification chosen in the Billing Classification field. However, this can be changed if required by clicking on the ellipses icon in the Cost Classification field and updating accordingly.

8. Click the ellipses icon in the Company field. This field lets users assign a worker to the company for which they work for.

As an example, if the employee works directly for ABC Company, select ABC Company as the company name. If the employee is a subcontractor working for AI’s Contracting Services, select AI’s Contracting Services as the company the worker works for.

9. Scroll through the list or use the Search field and type in the name of the company the worker is working for. Double click to select the appropriate company.

10. Click the ellipses icon on the Region field. A Region window appears. Scroll through the list or type in the region name in the Search field. This associates the worker with a default region.

11. Click the drop-down arrow of the Payroll Status field and select if the person is On Payroll or Off Payroll. The value selected here is used to determine if this person’s hours should be sent to the payroll system.

12. Click the drop-down box on the Shift field. A selection of Day, Night, or Other shift appears. Select the default shift type the employee typically works.

You can always indicate the actual shift worked when time is captured for this worker on a time sheet. This often happens when a worker is temporarily working a different shift from what their master personnel record is set to.

13. Shift Rotation is not required but can be added if there is a need to include this information on Billing reports. Click the drop-down box on the Shift Rotation field. A selection from the Options window appears. Select the default Shift Rotation the employee typically works. Shift Rotations are defined in the Options menu under Drop-Down List Setup > Shift Rotation Type.

14. Click the **Details** tab. This section is used to capture custom field values. Populate any custom fields per your organization requirements.

4.9 CREATE A NEW EQUIPMENT RESOURCE

Billings will receive all Operational Resources associated to Equipment from the Master Data Library within Platform.

Create a new Equipment Resource

1. To create an additional resource that will be used for purposes of customer billing only, go to Data Library > Resources and then **Equipment**.

2. The Equipment Resources tab appears. click the **Add Row** icon on the ribbon bar.

3. The equipment setup window opens. Enter in the name of the unit in the Name field.

4. Enter in the unit number for the piece of equipment in the Unit # field and the unit code in the Code field. While these can be the same, they do not need to be. The Unit # is typically matched to the equipment placard, while the code is typically matched to that equipment’s accounting code designation.

5. Click the drop-down arrow on the Source field. This field lets you label a piece of equipment as belonging to an operator, owned, third party, subcontractor or any other custom description previously set up by your system administrator.

6. Click the ellipses (three dots) icon in the Billing Classification field and the Cost Classification field. A Classification window appears. Select the unit’s classification by double clicking on it.

You can use the Search feature at the top of the pop-up to search for the classification using either the name or the code.

7. The Cost Classification field will duplicate the classification chosen in the Billing Classification field. However, this can be changed by clicking on the ellipses icon in the Cost Classification field and changing it as required.

8. Click the **Details** tab. This page is used to capture custom field values. Populate any custom fields per your organization’s requirements

4.10 CREATE NEW MATERIAL RESOURCE

Create a new material resource

1. To begin creating new material, go to Data Library > Resources > **Material**.

2. The Material Resources tab appears. click the **Add Row** icon on the ribbon bar.

3. The Material window opens. Enter the material Name and Code.

4. Click the drop-down arrow on the field labeled Source. This field lets you label a piece of material using one of the user-defined Material Types.

5. Click the ellipses (three dots) icon in the Billing Classification field and the Cost Classification field. A Classification window appears. Select the material’s classification by double clicking on it.

You can use the Search feature at the top of the pop-up to search for the classification using either the name or the code.

6. Click the **Details** tab. This section is used to capture custom field values. Populate any custom fields per your organization's requirements.

7. Select **Apply** or **OK** at the bottom of the page to save your changes.

4.11 CREATE A LOCATION

Locations are used to help in tracking of labor and equipment when they're not assigned to a project.

Create a location

1. To create a location, go to Data Library > **Location**.

2. The Locations tab appears. Click **Add Row** in the ribbon bar.

3. Enter the location description in the Name field and the location code in the Code field.

The screenshot shows a 'Location' dialog box with the following fields and controls:

- Name:** A text input field.
- Code:** A text input field.
- Status:** A dropdown menu currently set to 'Active'.
- Created:** A label for a date/time field.
- Modified:** A label for a date/time field.
- Buttons:** 'OK', 'Cancel', and 'Apply' buttons at the bottom.

4. Click **Apply** or **OK** at the bottom of the page to save your changes.

4.12 CREATE A NEW DIVISION

Create a new Division

1. To create a new division, go to Data Library > **Division**.

2. The Divisions tab appears. Click **Add Row** in the ribbon bar or press the Insert key on the keyboard.

3. The Division window appears. Fill in the Name and the Code fields. Both are mandatory.

Divisions must be unique within the database.

The screenshot shows a window titled "Division" with a dark header bar containing a small icon and the title. Below the header are two tabs: "General" and "Detail". The "General" tab is selected. The form contains the following elements:

- A building icon followed by "Name:" and a text input field.
- "Code:" and a text input field.
- "Status:" and a dropdown menu showing "Active".
- "Notes:" and a large text area with a vertical scrollbar.
- "Created:" and "Modified:" labels.
- At the bottom, three buttons: "OK", "Cancel", and "Apply".

4. The Status field will automatically default to *Active*. Enter any notes pertinent to the division in the Notes section.

5. Click the **Details** tab. This section is used to capture custom field values. Populate any custom fields per your organization's requirements.

6. Select **Apply** or **OK**, located at the bottom of the page to save changes.

Clicking **Apply** saves the changes and opens a new setup window, allowing you to quickly make another entry. Clicking **OK** will save the changes and close the setup window.

To view the Divisions tab and all divisions that have been set up, refer back to the steps above, where you opened the Division tab.

Any ribbon menu, where there is a **Send To** function, lets you send the contents of the active tab to Excel.

The available columns on the Divisions tab are:

- Name
- Code
- Status

If there is a column header that is not currently in view when the page is open and you would like to see it, right click any column header, and select **Column Chooser**.

4.13 CREATE NEW COMPANY (CLIENT OR SUPPLIER)

Project related vendors are integrated from the Assigned Vendors in Platform. If additional companies need to be added that have not been automatically created from the Assigned Vendors in Platform, a new company (client, supplier or vendor) can be created with the following steps.

Create new Company (Client or Supplier)

1. Go to Data Library > **Company**.

2. The Companies tab appears. Click **Add Row** on the ribbon bar or press the Insert key.

3. Enter the company name in the Name field. Enter the applicable code in the Code field. Click the drop-down box in the **Type of Relationship** field. Select whether the company is a Client, Supplier or other description previously specified by your system administrator.

The screenshot shows a 'Company' dialog box with a dark title bar and standard window controls. Below the title bar are five tabs: 'General', 'Address', 'Contact', 'Phone', and 'Detail'. The 'General' tab is selected. The form contains the following elements:

- A building icon to the left of the 'Name:' and 'Code:' labels.
- Two text input fields for 'Name:' and 'Code:'.
- A dropdown menu for 'Type of Relationship:'.
- A dropdown menu for 'Status:' with 'Active' selected.
- A large text area for 'Notes:' with a vertical scrollbar.
- Labels for 'Created:' and 'Modified:'.
- Three buttons at the bottom: 'OK', 'Cancel', and 'Apply'.

This close-up shows the 'Type of Relationship' dropdown menu. The menu is open, displaying a list of options:

- Client
- Supplier
- Owner
- DSP
- Subcontractor

The background shows the 'Status:' label and the 'Notes:' text area.

4. The Status field will automatically default to *Active*. Enter any notes pertinent to the company in the Notes section and then click the Address tab. Enter the necessary information for the primary address as listed. You can use the arrow keys or Tab key on your keyboard to move between fields.

The screenshot shows a window titled "Company:" with a dark header bar. Below the header are five tabs: "General", "Address", "Contact", "Phone", and "Detail". The "Address" tab is selected and highlighted. The main content area contains a form with the following fields: "Type: City:" (with a small icon to the right), "Address Type:", "Address 1:", "Address 2:", "City:", "Province:", "Postal Code:", and "Country:". At the bottom of the form area, there is a status bar that reads "Record 1 of 1" followed by a green plus sign, a red minus sign, and a right-pointing arrow. Below the status bar are three buttons: "OK", "Cancel", and "Apply".

This is a close-up view of the address form fields from the previous screenshot. It shows the following labels: "Address Type:", "Address 1:", "Address 2:", "City:", "Province:", and "Postal Code:". The "Type: City:" label is also visible at the top of the form area.

5. Click the **Details** tab. This section is used to capture custom field values. Populate any custom fields per your organization's requirements.
6. Click the **Append** icon at the bottom, left of the page to add another address. If you need to remove an address card, select the one to be removed, then click the **Delete** icon.
7. Continue the same steps to enter details in the Contact, Phone and Details tabs. When ready, click **Apply** or **OK** at the bottom of the page to save your changes.

4.14 MANAGING COMPANIES (VENDORS)

The Billings application uses vendor information to indicate what clients to bill on a project. Billings integrates with the Vendors master data library in Platform to populate the Companies data library in Billings.

At the project level, for vendors assigned to a project in Platform, Billings creates a site for the corresponding project and populates the Companies tab under the site with the list of assigned vendors.

When selecting companies for personnel, equipment, and line items on a time sheet in Billings, the Company drop-down list is a filtered list of values based on the project defined for the time sheet, and the assigned vendors that were brought in from Platform to become companies for that project.

In addition, vendors captured on daily plans from InEight Progress are added to the list of companies for that project in Billings and added as line items on timesheets with the applicable company assigned.

CHAPTER 5 – PROJECT MANAGEMENT

- 5.1 Rate Tables 60
- 5.2 Creating a new Rate Table 60
- 5.3 Copying a Rate Table 68
- 5.4 Manual Rate Imports 70
- 5.5 Importing a Rate Table 74
- 5.6 Utilizing Mass Edit with a Rate Table 78
- 5.7 Configuring a Project 81
- 5.8 Managing a Site 99

5.1 RATE TABLES

5.2 CREATING A NEW RATE TABLE

A rate table consists of personnel, equipment, material, and line item rates for premiums and allowances, as well as other rate exceptions. A rate table must be created and associated with a project prior to any billable work being LEM'd or invoiced for that project. A single rate table can be used by one or multiple projects and you can add a rate table to a specific project WBS item.

1. Go to Project Administration > **Rate Tables**.

2. The Rate Tables tab opens. You can select any rate table to modify, or you can create a new rate table by clicking the **Add Row** icon on the ribbon bar.

3. In the resulting new rate table tab, enter the name for the new rate table in the Name field. In the Code field enter the new code. This can be a numeric value or an abbreviation that the rate table goes by.

4. Select the appropriate region the rate table belongs to.

5. The Status field automatically defaults to *Active*. Enter any notes pertinent to the rate table in the Notes section and then click **Apply** to create the rate table

5.2.0.1 Column Display Options

The Column Display Options button lets you show or hide columns by going to Rate Tables > Selecting a rates table, and then selecting or deselecting each shift column from the **Column Display Options** button from the ribbon menu. By default, at least one item needs to be selected. If all items are deselected, the drop-down will default to show day shift for Personnel, or Type 1 for Equipment.

5.2.0.2 Company and Source columns

The Company and Source columns give you flexibility when working with different companies, roles or resource types. These columns are listed in the personnel, equipment, material, and line items tabs of the rate table and allow you to set different rates based on what role is performing the work or where the resource comes from. For example, if rates differ between companies for the same role, where a subcontractor charges \$30/ST hour, and an employee charges \$25/ST hour for day shift, and \$27/ST hour for night shift, you can use the Company and Source columns in the rate table to define those rates without having to create separate rate tables.

5.2.0.3 Personnel Rates

In the same new rate table tab as above, click the **Personnel Rates** tab to start entering personnel rate information.

the drop-down list under the Resource column, and then select the individual assigned to the rate record.

Select the Effective Date of the rate record (that is, when does this rate take effect) and enter in the rates to be used for the different earnings class by shift (i.e., Straight Time, Overtime, Double Time, Double Time and a Half, Travel Time, LOA, and Day). Repeat these steps to add another classification to this rate table.

5.2.0.4 Equipment Rates

To start entering equipment rate information for the rate table you have open, click on the **Equipment Rates** tab.

By default, the most current rates for each classification (and optionally, named resource) are shown. To view the rates that were in effect on a different date, change the effective date in the Shown rates effective as of drop-down above the rates grid.

To add a new equipment rate record, click the **Add Row** icon located in the ribbon bar. If you wish to delete a record, select it by clicking it once, and then click the **Delete Row(s)** icon located in the ribbon bar.

Click the drop-down list or the ellipses icon under the Classification column and select the classification being assigned to the rate record.

Optionally, Billings supports rates for individual resources by classification. For example, JD Backhoe operating as an excavator can be billed out at rates different than the standard backhoe rates. If you choose to enter a rate for an individual piece of equipment in the selected classification, click the drop-down list under the Resource column, and then select the individual piece of equipment assigned to the rate record.

Select the Effective Date of the rate record (that is, when does this rate take effect) and enter in the rates to be used for the different earnings class by shift (i.e., Hours, Days, Weeks, Months and a Standby and Each). Repeat these steps to add another classification to this rate table.

5.2.0.5 Material Rates

To start entering material rate information, click on the **Material Rates** tab under the Rate table tab you are in.

By default, the most current rates for each classification (and optionally, named resource) are shown. To view the rates that were in effect on a different date, change the effective date in the Shown rates effective as of drop-down above the rates grid.

To add a new Material rate record, click the Add Row icon located in the ribbon bar. If you wish to delete a record, elect it by clicking it once, and then click the Delete Row(s) icon located in the ribbon bar. Click the drop-down list or the ellipses icon under the Classification column and select the classification being assigned to the rate record.

Click the drop-down list or the ellipses icon under the Classification column and select the classification being assigned to the rate record.

Optionally, Billings supports rates for individual items by classification. If you choose to enter a rate for an individual material in the classification selected, click the drop-down list under the Resource column, and then select the individual material being assigned to the rate record.

Select the Effective Date of the rate record (that is, when does this rate take effect) and enter in the rates to be used for the earnings class (i.e., Each). Repeat these steps to add another classification to this rate table.

5.2.0.6 Line Item Rates

To start entering Line Item rate information, click on the Line Item Rates tab under the Rate table tab you are in. Continue adding the necessary resource type, classifications, and line item types for the project and the corresponding rates.

Rate Tables | Rate: EX1

General | Personnel Rates | Equipment Rates | Material Rates | Line Item Rates

Edit your line item rates here. By default, the most current rates for each classification are shown. To view the rates that were in effect on different dates, change the effective date.

Show rates effective as of: Oct-31-2024

	Resource Type	Classification	Assigned To	Line Item Type	Eff. Date	Each
+	Personnel	Iron Worker - Journeyman (IW-JM)		Allowance - LOA	Dec-01-2023	200.00
	Personnel	Iron Worker - Apprentice 1 (IW-A1)		Allowance - LOA	Jan-01-2023	150.00
	Personnel	Iron Worker - Foreman (IW-FM)		Allowance - LOA	Jan-01-2024	250.00
	Personnel			Premium - Confined Space	Jan-01-2024	1.50
	Personnel			Premium - Fire Watch	Jan-01-2024	.50
	Personnel				Jan-01-2024	25
	Personnel			Allowance - Travel_Daily	Jan-01-2024	100.00
	Personnel			Allowance - Travel_Shift	Jan-01-2024	500.00

Record 1 of 8

OK Cancel Apply

By default, the most current rates for each classification (and optionally, named resource) are shown. To view the rates that were in effect on a different date, change the effective date in the Shown rates effective as of drop-down above the rates grid.

Edit your line items rates here.

To add a new Line Item (e.g. Premium or Allowance) rate record, click the **Add Row** icon located in the ribbon bar. If you wish to delete a record, select it by clicking it once, and then click the **Delete Row(s)** icon located in the ribbon bar.

Select the Resource Type in the first column (i.e., Personnel, Equipment, or Material) to indicate which entity type the rate record will apply to.

Click the drop-down list or the ellipses icon under the Classification column and select the type being assigned to the rate record. The list here will be determined by the Resource Type specified for the row.

Optionally, Billings supports rates for individual resources by classification. If you choose to enter a rate for an individual resource in the classification selected, click the drop-down list under the Resource column, and then select the individual resource being assigned to the rate record.

Select the Line Item Type in the next column (note that this list will be determined by your system administrator during application configuration as it is configurable) to indicate which entity type the rate record will apply to. Select the Effective Date of the rate record (that is, when does this rate take effect) and enter in the rate to be used for the earnings class (i.e., Each). Repeat these steps to add another row to this rate table.

5.3 COPYING A RATE TABLE

In some cases, you will need to create a new rate table that's very similar to an existing one. Instead of performing the entire process of creating a new rate table, the best process would be to copy a rate table.

Copy a Rate Table

1. Go to Project Administration > **Rate Tables**.

2. The Rate Tables tab appears. Select the rate table to be copied by clicking on it once with the mouse, then on the ribbon bar, click **Copy**.

3. Now click **Paste** or **Paste Special** to make a copy of the rate table.

Paste creates an exact copy of the source rate table, while Special Paste lets you control what and how the rate table is copied, including adjusting effective dates, changing rate table name, and code, and adjusting other aspects of the rate table that are applicable for the new rate table. If Paste Special is selected, the Paste Special window will appear

4. Under section 1, change the name of the rate table and type in an appropriate Code for the new rate table.

The screenshot shows a dialog box titled "Paste Special (Copy of # [Internal] Shop/Yard Facility - COST)". It contains four sections:

- 1. Enter rate table details:**
 - Name: Copy of [Internal] Shop/Yard Facility - COST
 - Code: Copy of 16-COST
- 2. Choose which rates to copy:**
 - Personnel Rates
 - Equipment Rates
 - Material Rates
- 3. Rate tables may have more than one effective date. Choose how you wish to copy these:**
 - Copy rates across all effective dates exactly as they exist on the original rate tab
 - Copy just the rates that are effective now (recommended)
 - Set all copied effective dates to: Jan-30-2023
 - Keep original effective dates
- 4. Pressing OK will copy the rate table and:**
 - Return you to the rate table list
 - Open the new rate table

At the bottom right, there are "OK" and "Cancel" buttons.

5. Under section 2, determine precisely what portion of the rate table you want to be copied (either Personnel, Equipment, Material, Line Items, or all four sets of rates).

6. Section 3 gives the choice of copying the rates exactly as they exist in the original rate table or to modify the effective dates. If the effective date requires modification, choose the date the rates will be effective from.

7. Section 4 determines the next steps, either to return you to the rate table list or open the new rate table.

8. After the modifications have been made, click **OK** along the bottom of the rate table screen to save.

If **Open the new rate table** is selected, the new rate table will open allowing you to make any additional modifications.

10. After the modifications have been made, click **OK** at the bottom of the rate table page to save.

5.4 MANUAL RATE IMPORTS

The Manual Rate Import wizard will guide you through importing labor, equipment, material or line item rates from a spreadsheet.

To import multiple rate types, you must run the import wizard for each rate type

A custom template can be used to map and import data into the Billings rate tables. Template spreadsheets are provided when accessing the wizard, but any Microsoft Excel spreadsheet can be used and mapped through the wizard process. After the templates have been downloaded and ready to import, click **next** to continue.

Import rate table file and configure settings

1. In the Rate table File section, select a file by clicking the ellipses, select the file, and then click **open**.

2. Columns from the imported file appear and can be updated in the Billings data selection screen. After reviewing the imported data, click **Next**.

3. The Column Mapping section lets you specify the column mappings. Fields with an asterisk are required.

Click the matching line# drop-down (arrow/list) next to each resource to map the columns, and then click **Next**.

Step 2: Column Mapping
Specify the column mappings. Fields marked with an asterisk (*) are required.

Line#	A	B	C	D	E	F	G	H	I	J	K	L	M	N	O

OK Cancel

5. Select **Create New Rate** or **Update Existing Rate Table** to specify how to import the data, and then click **Next** start your import.

When creating a new rate table, label it in the Rate Table Name field. The Rate Table name, Rate Table Code and Region fields are required to proceed.

5. Click **Next** and then **Finish** to save your import.

5.5 IMPORTING A RATE TABLE

Billings lets you create and maintain rate tables externally in a spreadsheet format and import the rates into an existing rate table or as a new rate table. There are two forms of rate table imports.

You can use the Rate Import template through Processes > Imports > Rate Table Import or the Legacy Labor Rate Import as shown below.

Legacy Labor Rate Imports

Currently, Only Personnel rate import is supported

1. To Start the import process, select Project Administration > Rate Tables and select **Import Rates** from the ribbon bar.

2. The Rate Import wizard appears.

3. Select the spreadsheet file to import by using the ellipses (three dots) icon to launch the file picker and select the path and the rate table Excel file.

4. The data preview pane will populate with the contents of the source spreadsheet.

5. Specify whether the rates are stored horizontally or vertically in the spreadsheet and indicate how many of the top rows to ignore (for example, header row which may contain column names). Click **Next** to proceed.

6. The second page of the wizard lets you map columns or rows in the spreadsheet to resource classification, resource identifier (if required), and units of measure. The mappings are different depending on whether the rates spreadsheet is horizontal, or vertical.

Single rates per row of data layout:

Multiple rates per row of data layout:

7. After you have mapped the columns, click **Next** to go to the third page of the wizard which will preview the imported rate table in Billings format.

8. The last column in the import preview page specifies errors that have been found with each line of the import file. Only lines which are error-free will be imported into Billings. Review and correct any errors reported and click **Next** to proceed.

9. The final page of the wizard lets you control whether the rate import will be imported into a new rate table or whether the import will update an existing rate table.

10. Create a Rate Table Name or choose an existing rate table from the Rate Table Name drop down list. If the Update Existing Rate Table option is selected. Indicate the Effective Date for the rates. After you are done, click **Import** to import the rates.

5.6 UTILIZING MASS EDIT WITH A RATE TABLE

The Mass Edit feature is available to users to simultaneously adjust multiple rates within a rate table. This function frees you from needing to adjust each rate individually. Although this functionality is beneficial, you must be cautious when applying it, as multiple rate records are affected simultaneously. The mass edit feature can also be used to clean up a rate table after it has been updated using the Rate Import Wizard (for example, to remove any new rates that did not actually change from prior effective date).

mass edit Rate Tables

1. Go to Project Administration > **Rate Tables**.

2. Select the required rate table from the list by double-clicking on it.

Name	Code	Status
[Drone] Shepard Facility - PARROLL	88-PARROLL	Active
88802, Enigma Aerospace Launch Hub - BELLING	88802-BELLING	Active
[Drone] Shepard Facility - COST	88-COST	Active
88802, Enigma Aerospace Launch Hub - PARROLL	88802-PARROLL	Active
88804, Enigma Tower 13-34-79-17-88-PARROLL - PARROLL	88804-PARROLL	Active
8071205, Enigma RC Rates - BELLING	8071205-BELLING	Active
88806, Enigma SGM - PARROLL	88806-PARROLL	Inactive
88803, MES - PARROLL	88803-PARROLL	Inactive

3. The rate table opens in a new tab, with the General tab active below it.

A screenshot of the 'Rate Table' form in the 'General' tab. The form includes fields for Name (88802, Enigma Aerospace Launch Hub - BELLING) and Code (88-COST). Below these are dropdown menus for Region (Alaska) and Status (Active). A large text area for Notes is present below. At the bottom, it shows 'Created: 3/8/2018 12:54 PM' and 'Modified: 8/2/2021 1:36 PM'.

4. Review the Personnel, Equipment and Material Rates tabs to confirm your selection is correct for making mass edits. From the ribbon bar, select **Mass Edit**.

1. Select Mass Update Type:

- Updates Rates for the current Effective Date
- Create new Rates for this Effective Date: Jan-30-2023
- Remove Rate lines (Classifications) for the current Effective Date
- Remove Rates for the current Effective Date which have not changed since last Effective Date

2. Select Scope:

- Personnel Rates
- Equipment Rates
- Material Rates
- Include blank values
- Include rate codes

3. Specify Adjustment Details:

- Blank out Rates
- Keep Current Rates
- Alter Rates by Amount: 0
- Alter Rates by Percentage: 0 %

Use a minus sign to indicate negative amount, or percentage decrease.

OK Cancel

5. In section 1, select the type of mass update:

- Update Rates for the current Effective Date.
- Create new Rates for this Effective Date.
- Remove Rate lines (Classifications) for the current Effective Date.
- Remove Rates for the current Effective Date which have not changed since last Effective Date.

6. In section 2, determine precisely what scope of the rate table will be edited (either Personnel, Equipment, Material, Line Items, or all four sets of rates).

7. In section 3, specify the adjustment details (gives the choice of blanking out the rates, keeping the current rates, or altering the rates by either an amount or percentage).

8. After the modifications have been made, click **OK** to adjust the rate table based on the parameters you specified. The adjusted rate table will automatically refresh with the effective date and rates altered accordingly.

9. When complete, click the **Apply** button or to save the changes and exit the window, click **OK** located at the bottom of the page.

5.7 CONFIGURING A PROJECT

When a project has been created in Platform and flagged as being Time and Materials, it is automatically synced into Billings.

To configure the project for billings purposes, double-click the existing project from the list and go through the tabs listed below.

Drag a column header here to group by that column 🔍

Name	Code	Status	Internal Code	Company	Region
*LEM Demo	111111.500	Active	Sample Ref #	Default	Default
ST-1001 TEST	ST-1001	Active		Default	Default

180003, MEG - PAYROLL (Inactive)

180003, MEG Energy - BILLING (Inactive)

180004, Encana TOWER 13-34-79-17 W6 PADSIT - PAYROLL

180005, Encana, Tower 6-16-080-17 W6 10 Well Pad - PAYROLL (Inactive)

180006, Encana SCLH - BILLING (Inactive)

180006, Encana SCLH - PAYROLL (Inactive)

180008-33 - PAYROLL (Inactive)

180009-33 - PAYROLL (Inactive)

180010-33 - PAYROLL (Inactive)

Select the applicable job Cost Rate Table from the drop-down menu, if desired, and finally select the applicable Payroll Rate Table from the drop-down menu, again, if desired or required.

The screenshot shows the 'Configure' tab of a software interface. It contains several sections: 'Bill Rates' with a dropdown for 'Bill Rate Table' and a checkbox for 'Allow Override Timesheet Bill Rate'; 'Cost Rates' with a dropdown for 'Cost Rate Table'; 'Payroll Rates' with a dropdown for 'Payroll Rate Table'; 'Work Flow' with a checkbox for 'Approval required'; 'Budgeting' with a dropdown for 'Budget By' and 'Budget at Level'; and 'Custom Details' with fields for 'Dim 1', 'Dim 2', and 'Activity Code'. A large dropdown menu is open, listing various cost and payroll rate tables, including '[Internal] EQUIPMENT - COST', '[Internal] Non-project Specific - COST', '[Internal] Shop/Yard Facility - COST', '[Internal] Shop/Yard Facility - PAYROLL', and several project-specific entries like '180002, Encana Pipestone Liquids Hub - BILLING'. At the bottom right, there are 'OK', 'Cancel', and 'Apply' buttons.

This is a close-up of the 'Payroll Rate Table' dropdown menu. It lists the following options: '[Internal] EQUIPMENT - COST', '[Internal] Non-project Specific - COST', '[Internal] Shop/Yard Facility - COST', '[Internal] Shop/Yard Facility - PAYROLL', '180002, Encana Pipestone Liquids Hub - BILLING', '180002, Encana Pipestone Liquids Hub - PAYROLL', '180003, MEG - PAYROLL (Inactive)', '180003, MEG Energy - BILLING (Inactive)', '180004, Encana TOWER 13-34-79-17 W6 PADSIT - PAYROLL', '180005, Encana, Tower 6-16-080-17 W6 10 Well Pad - PAYROLL (Inactive)', '180006, Encana SCLH - BILLING (Inactive)', '180006, Encana SCLH - PAYROLL (Inactive)', '180008-33 - PAYROLL (Inactive)', '180009-33 - PAYROLL (Inactive)', and '180010-33 - PAYROLL (Inactive)'. There is a red 'x' icon at the bottom of the list.

If timesheet approvals are required for the project, check the **Approval required** check box. The main result of this check box being set is that unapproved time sheets are not picked up for the LEM or Invoicing process, or other exports which have time sheet approvals enabled.

Work flow can also be handled at the processing stage of the time sheet cycle. If you are generating a LEM process, the process can be set to the ignore approval work flow, depending on your organizational work flow requirements.

Select the level of detail you want the budgeting information to use if you wish to track project budgets in Billings. Most projects require more than one level of detail in the project structure. You can track budgets and progress at the Project/ WBS level or at the WBS/Cost Code level, depending on your budgeting requirements.

Project Level 1 means the budget is being created at the root project level. If set to Project Level 2, the budget is being applied to WBS Level 1, second node of the project tree.

The screenshot shows a 'Budgeting' configuration panel. At the top, it says 'Budgeting' followed by a horizontal line. Below this is a descriptive text: 'Set the level of detail of budgeting that will be used on this project. Once progress or budgets have been entered, you can no longer edit these values.' There are two configuration fields: 'Budget By:' with a dropdown menu currently set to 'Project', and 'Budget at Level:' with a numeric spinner set to '2'.

5.7.0.2 Line-Item Markups tab

In the Default Markup Values section, enter markup percentage values for your charge out rates for Line Items that are entered on time sheets.

Equipment	Crew	Material	Timesheet Options	Work Order	Attachments	Mobile Security	Mobile Configuration
General	Configure	Line Item Markups		Cost Code	Details/Notes	Budget	Progress

Default Markup Values

Line Items on timesheets will use the following markup percentages when calculating LEM amounts. Exceptions to these default percentages are specified in the table below.

Personnel line items are charged at cost plus %

Equipment line items are charged at cost plus %

Material line items are charged at cost plus %

Line items are charged at cost plus %

Other line items are charged at cost plus %

Invoice markups as seperate invoice items

Exceptions

The default percentages above may not be accurate for some of the resource type/line item combinations. Specify the exceptions here.

Personnel	Equipment	Material	Line Items	Other			
					Source		
	Line Item Type	Subcontractor	Employee	DSP	Third Party	FAC	
→	Material

OK Cancel Apply

5.7.0.3 Cost Code tab

Click **Add Row** on the ribbon menu to add new cost codes to the project/WBS node selected. Billings only allows charging of time and resources to a project node if cost codes have been associated with the project or WBS node. If your project structure is complex, you would normally not attach any cost codes at the root node, as they would be defined at the lowest level of the project/WBS tree structure.

HOME

Projects Project: 0

Cost Code	Description
<Add New Cost Code>	<Add New Cost Code>
00	Billable
1005	Survey
1006	Dewatering
1015	Grade
1020	Line Locating
1025	Hydrovac

If you need to remove a cost code, select the line, then click **Delete Row(s)** from the ribbon menu.

Add as many cost codes to the node as needed to capture the required information during LEM data entry. If the Project/Cost Code custom fields have been set up, you can populate them by clicking on the small filter icon next to the cost code to open a list of the custom fields available.

5.7.0.4 Details/Notes tab

This tab lets you enter project specific data into custom fields that have been set up by the administrator, along with general project notes.

Equipment	Crew	Material	Timesheet Options	Work Order	Attachments	Mobile Security	Mobile Configuration

5.7.0.5 Equipment tab

Select the equipment filtering option that you want to apply to the project.

- No Filter lets you to select any active piece of equipment, given the Region security filters.
- Filter by Site lets you to select only those pieces of equipment which have been associated with the site to which the project belongs to.
- Filter by Schedule lets you to select only those pieces of equipment for which the work date falls between the Start and End dates on the schedule page.

When Filter by Schedule is selected, you can click **Add Row** to add equipment that is used in this project .

Enter the assignment start and end dates as well as unit of measure and quantity to use in calculating the daily equipment cost.

The rate used in this calculation will be extracted from the Cost Rate Table set up for this project on the Configure tab.

5.7.0.6 Crew tab

Select the personnel/crew filtering option that you want to apply to the project.

- No Filter lets you to select any active person from the personnel list, given the Region security filter.
- Filter by Site Personnel List lets you to select only those individuals who have been associated with the site to which this project belongs.
- Filter by Selected Crews lets you to select only those individuals who belong to the crews selected in the rows below from the crews defined for the site this project belongs to.

If Filter by Selected Crews is selected, select which crews will be working on this project by selecting the **Add Row** icon located on the ribbon menu.

Crews are defined at the Site level, which is identified in the General tab of the Project.

5.7.0.7 Material tab

Select the material filtering option that you want to apply to the project.

- No Filter lets you to select any active material from the material list, given the Region security filter.
- Filter by Site lets you to select only those materials who have been associated with the site to which this project belongs to.

- Filter by Materials lets you to select only those materials that belong to the materials selected in the window below.

If required, limit which materials may be used on this project by adding them from the material list.

Specify how to filter the Material list for timesheets entered against this project

Filter by Materials

5.7.0.8 time sheet Options tab

In the Multi Day time sheet, section set the number of days that will appear by default on a Multi Day time sheet.

General	Configure	Line Item Markups	Cost Code	Details/Notes	Budget	Progress	
Equipment	Crew	Material	Timesheet Options	Work Order	Attachments	Mobile Security	Mobile Configuration

Multi Day Timesheet

Set the default number of days that will appear on a multi day timesheet (Max 31)

Days:

Timesheet Numbering

Use project specific timesheet numbering

Start T/S# at:

T/S# to digits

T/S# Template:

Prefix:

suffix:

Example:

0

Allow user to override T/S number

The time sheet Numbering section lets you set up the prefix or suffix for the name you want to use in the naming of your time sheets. It also lets you set the starting number and number of digits you want to use. If you want to allow users to override the time sheet number, check the **Allow user to override T/S number** option.

5.7.0.9 Work Order tab

You can add work orders that will be available on the time sheet page. To add a new work order, from the Work Order tab, select the **Add Row** icon located on the ribbon menu. When the new row appears on the page, provide all applicable information, then click **Apply**.

General		Configure		Line Item Markups		Cost Code		Details/Notes		Budget		Progress

Drag a column header here to group by that column 🔍																	
	Code	Description	Start Date	Close Date	Client Contact	Status	HD Phase Code										
▼	#0c	#0c	=	=	#0c	=	#0c										
Record 0 of 0 ▶																	
												OK		Cancel		Apply	

5.7.0.10 Pay Items tab

Pay Items will be automatically populated from Platform if they have been defined. However, you can also manually add pay items that can then be used on individual WBS items to group them for billing purposes. To add a new pay item, from the Pay Items tab, select the **Add Row** icon located on the ribbon menu. When the new row appears on the page, provide all applicable information, then click **Apply**.

Attachments tab

You can upload any pertinent documentation for this project on the attachments tab.

1. To add an attachment, click the **Add Row** icon located on the ribbon bar.
2. To delete an unwanted attachment, select the row to be deleted by clicking it once and then click the **Delete Row(s)** icon located on the ribbon bar
3. After the new row appears, click the **Folder** icon in the new row in the Attachment column, to select the document you want to upload.

4. Locate the document in your folder structure, and then select it.

The attachment name shows in Attachment.

5. Select the type, file date and status from the columns, and then click **Apply** or **OK**.

WBS Structure

After all the project tabs have been populated with the required information, you can create the WBS structure.

1. To add a WBS item to a project, right-click the project, and then select **Add WBS**.

Alternatively, you can click the **Add button**, located directly above the project name to add a new WBS item.

2. Enter the name of the new WBS and the Code or abbreviation to be used for this item and the PO number if required.

3. All other fields under the general tab are optional unless instructed otherwise by the administrator or required for the job. If left empty, these fields inherit values from the parent node, or the parent's parent node.

Unless a different set of rates needs to be used on this node than those set up at the project node, nothing needs to be set up under the Configure tab. Rate table assignment also follows the inheritance rules as above.

4. To capture data on a time sheet against the project, cost codes must be applied to the project, either at the project node (not recommended), or at the WBS nodes.

5. To apply cost codes, click the **Cost Code** tab of the applicable project or WBS node .

6. Click the **Add Row** icon located in the ribbon bar, then select the drop-down menu to choose the cost code.

The Budget and Progress tabs are only visible if you specified budgeting configuration information at the root node of the project in the Configure tab.

Equipment	Crew	Material	Timesheet Options	Work Order	Attachments	Mobile Security	Mobile Configuration
General	Configure	Line Item Markups	Cost Code	Details/Notes	Budget	Progress	
 Use the filter criteria and the button below to retrieve the sum of budgets for this project.

7. In the Budget and Progress tabs, you can retrieve information on the selected job to view.
8. Click **Apply** to complete the setup of the node.
9. Continue to create additional WBS items and any child WBS items that are further required following the steps above.
10. Using the Configure tab of a WBS item, select the applicable pay item that this WBS item belongs to (this might be pre-populated from InEight Control if pay items are maintained there)
10. After all folder levels have completed, click **OK** to save the project and exit the page.
11. After all folder levels have been completed, click **OK** to save the project and exit the page.

To view the list of projects that have been set up, click on **File, Open and Project**.

5.7.1 Platform project association

You can associate Billings with additional master data, such as project data from the Project details page in Platform. Associating Platform projects lets you organize Billings directly from Platform’s Organizational Breakdown Structure (OBS). Your location assignment in the OBS determines the access you inherit and your visibility to other OBS areas.

Extracting Platform project master data directly into Billings promotes data consistency and helps ensure that the data is being pulled from a single source of truth.

Platform project-specific master data can be maintained in one place, then it can flow directly into Billings in the cloud.

Notes

If the Billings project was created in Platform, the Project name, Code, and Position fields are disabled and can only be managed in Platform.

5.8 MANAGING A SITE

Sites are automatically created when a Project is created during synchronization with Platform. The project's name and code are used for the Site Name and Code fields. The purpose of sites is to maintain project specific resources for use in Billings. The labor and equipment named resources, as well as vendors, assigned to the Project in Platform, are reflected in the Personnel, Equipment and Companies tabs.

To view the list of all sites that have been set up, go to Project Administration > **Sites**. The available columns on the Sites tab are as follows:

- Name
- Code
- Region
- Status

5.8.0.1 Personnel Tab

The Personnel tab shows the current resource assignments and is split into two sections, Assign People and Create Crews.

If there are missing resource assignments that are required for billing purposes, and they cannot be added to the project operational resources in InEight Progress , you can click **Add Personnel** to add additional resource assignments. A window shows with the names of available people. Double-click on each individual resource, or single select (highlight) all resources required and click **OK**. Once all required resources have been added to the Personnel tab, click **Apply** to save the updates.

Assign personnel to the site by using the 'Add Personnel' button. Once assigned, you can group personnel into crews, as well as items related to this site to limit the timesheet personnel lists to this pre-assigned list.

Drag a column header here to group by that column

Record 1 of 1 ◀

Click the **Add personnel** button located above the Personnel tab to launch the Personnel List dialog box. You can select multiple records using the mouse and holding the Ctrl key to select each applicable record, or select a range of records by selecting the first record, holding the Shift key, and then selecting the last applicable record. Click **OK** to bring the selected records to the page.

The screenshot shows a window titled "Personnel Resources" with a search bar and a table of personnel. The table has columns for Code, Last Name, First Name, Source, Billing Clas..., Cost Classi..., S..., Region, Company, Payro..., and Act... The table contains 14 rows of data, with the first row highlighted in green. Below the table is a filter section with a checkbox for "Status = Active" and buttons for "Refresh", "OK", and "Cancel".

Code	Last Name	First Name	Source	Billing Clas...	Cost Classi...	S...	Region	Company	Payro...	Act...

30027	Cross	Brymer	DSP	Pipefitter - ...	Pipefitter - ...	D...	Alberta	DSP Comp...	On P...	Act...

After an individual is assigned to the site, additional details can be entered, such as timesheet entry display Order, Site Code (usually customer driven), Shift Rotation, Start Date, End Date, and User Def 1-4. The Shift Rotation is populated from the Personnel tab by default (if assigned on the global resource record) but can be overridden. Shift Rotation selections are defined in the Options menu under the Drop-Down List Setup, Shift Rotation Type.

You can override a worker's default Bill and Cost Classifications while they are part of the crew, by changing the Bill As and Cost As fields for the individual. These changes will be the new default for time sheets when using these resources on a project, where the project has the crew option enabled (Project Administration Project Crew Filter by selected crews).

Use the right side of the page to create crew definitions for the site. Create crews by using the **Add Crew** button, located at the top of the page. Enter the crew's name and assign the crew a code, then click **Apply**.

An individual can be part of multiple crew definitions at the same time. To view the crew list, expand the crew definition by using the + button next to the crew code.

5.8.0.2 Equipment tab

The Equipment tab lets you view and maintain a list of equipment attached and assigned to the site. User Def 1-4 can be set in the Site List. Select the Add Equipment button, located at the top of the page to show the Equipment List dialog box. You can select multiple records using the mouse and holding the **Ctrl** key to select each applicable record or select a range of records by selecting the first record, holding the **Shift** key, and then selecting the last applicable record. Click **OK** to bring the selected records to the page.

5.8.0.3 Materials tab

The Materials tab lets you view and maintain a list of material attached and assigned to this site. User Def 1-4 can be set in the Site List. Click the **Add Material** button, located at the top of the page, to bring up the Material List dialog box. You can select multiple records using the mouse and holding the **ctrl** key to select each applicable record, or select a range of records by selecting the first record, holding the **shift** key, and then selecting the last applicable record. Press **OK** to bring the selected records to the page.

5.8.0.4 Companies Tab

The Companies tab is used to assign companies to the site by using the **Add Company** button. When assigned, you can configure project or WBS items related to this site to limit the timesheet company lists to the pre-assigned list.

5.8.0.5 Contacts tab

The Contacts tab lets you view and maintain a list of contacts associated with this site. Click the **Add Contact** button located at the top of the page, to add additional contacts to this list.

CHAPTER 6 – TIMESHEETS

OVERVIEW

6.1 Understanding TimeSheets	108
6.2 Creating a Multi-Day, Multi-Project TimeSheet	121
6.3 Creating a Multi Day, Single Project Timesheet	123
6.4 Copying an Existing Timesheet	133
6.5 Importing a Timesheet	136

6.1 UNDERSTANDING TIMESHEETS

Timesheets get posted to Billings in the following ways:

- Creation of a daily plan that is set to Approved
- Creation of a weekly time sheet
- Manual creation of a time sheet directly in Billings
- Submission of a timesheet from the Billings Timesheet mobile app
- External system that publishes billing related records directly into Billings via APIM feed
- Time sheet import, where a user manually uploads a time sheet into Billings

Billings supports the following types of time sheets:

- Single Day, Single Project
- Multi Day, Single Project
- Multi Day, Multi Project

To view the time sheets tab and all time sheets that exist in the system, go to time sheets > **time sheets**.

The available columns on the time sheets tab are as follows:

- Timesheet #
- Work Date
- Timesheet ID

- Job #
- Root Project
- Name
- Region
- Company
- Days
- Status
- Type
- Approval Status
- Close
- Created By
- Created Date
- Timesheet Total
- Modify By
- Modify Date
- Park

6.1.0.1 Time Sheet Status Rules

Timesheet Status	Timesheet and Approval Status Rules
Open	All items contained on the time sheet can be modified or deleted, and new items will be added if you have the applicable security permissions.
Locked	The time sheet contains items that have been invoiced or exported. Exported or invoiced time sheet line items cannot be modified or deleted

Timesheet Status	Timesheet and Approval Status Rules
	<p>but new lines/items can be added or modified by an Administrator or Power User until they too are invoiced or exported.</p>
Closed	<p>Time sheet cannot be modified</p>
Pending Approval	<p>All items contained on the Time sheet can be modified or deleted and new items will be added, providing the user has security permission.</p>
User Defined (optional)	<p>All items contained on the Time sheet can be modified or deleted and new items can be added, providing the user has security permission.</p>
Un-invoiced	<p>Time sheet cannot be modified. Un-invoiced Time sheet items will be eligible for invoicing. Time sheet status must be changed to Pending approval or user defined status to make any modifications.</p>
Parked	<p>Time sheet is temporarily unavailable for exporting and invoicing until Parked status is removed. When <i>Parked</i> status is removed, time sheet returns to the status it had prior to being parked.</p>

Creating a Single Day, Single Project time sheet

1. To create a single day, single project time sheet, go to Timesheets > **Timesheets**.

2. From the ribbon bar, select the timesheet type by using the drop-down arrow on the New icon, and select **Single Project - Daily**. A new Timesheet window opens.

Timesheet #	Type	Timesheet ID	Job #	Root Project	Name	Region	Company	Work Date	Days	Status
0000019390	Single Day Timesheet	0000019390		DEMO	KIEWIT DEMO(DEMO)	Alberta	Mining Company	Jan-17-2023	1	Open
0000019389	Single Day Timesheet	0000019389			Kennedy QA Test	Alberta	Techmaton Electric & Cont...	Jan-15-2023	1	Open
Copy of 0000019386	Single Day Timesheet	0000019388		DEMO	KIEWIT DEMO(DEMO)	Alberta	Mining Company	Jan-14-2023	1	Open
0000019386	Single Day Timesheet	0000019386		DEMO	KIEWIT DEMO(DEMO)	Alberta	Mining Company	Jan-13-2023	1	Open

3. Click the three dots icon located to the right of the Project field. A Project search display opens.

4. Find and select the Project that this timesheet is for by using the Project Root or Code drop-down list.

The project work breakdown structure (project tree) will appear in the main area of the Project display.

5. Select the applicable project folder by double clicking it. This returns the name of the folder selected to the Project field on the Timesheet entry page.

Selecting a more detailed level of the project using the tree picker filters the available project/cost code paths when entering Labor, Equipment, Material, and Line Items.

6. The project name will be filled in the Project field in the time sheet entry screen. The Region and Client fields will default to the selected project’s region and client values (or those inherited from the parent tree nodes of the selected project tree structure).

7. If the selected project has been configured to use automatically generated Timesheet numbers, skip to the next step; otherwise click on the Timesheet # field, and then enter the unique Timesheet number for this Time sheet.

You can leave the Time sheet # field blank, in which case the Time sheet # field is automatically generated by the database and matches the system generated Time sheet ID.

8. In the Date field, select the date when the work was performed.

The screenshot shows a web form for entering time sheet data. On the left, there are input fields for 'T/S ID:', 'T/S #:', 'Job #:', and 'Date:'. The 'Date:' field is open, showing a calendar for January 2023 with the 30th selected. To the right, there are fields for 'Ordered By:', 'Location Billed To:', and 'Client #:'. Below these is a 'T/S Total:' field showing '\$0.00'. At the bottom, there is a table with columns for 'Cost Code', 'OT', 'DT', and 'DTH'.

Cost Code	OT	DT	DTH

6.1.0.2 Personnel Tab

There will be several columns listed in the Personnel tab, as well as some columns hidden. However, to speed up the process of data entry, it is beneficial to remove or add only the necessary columns.

If a column from the Personnel tab is needed on the Time sheet layout, you must add it before data can be entered into it. Right click any column header, and then select Column Chooser to view this list. You can then drag and drop any of the additional fields into the Timesheet view or remove any fields that are not required.

You can control where the new column will be displayed on the page by dragging and dropping the column headers in the desired location, as identified with the black line.

After a layout has been created or modified with the columns relevant for data entry, save the layout by expanding the Layout drop-down menu and then selecting Save As. A window opens, to allow you to name the layout. This layout is specific only to you. It is not available to other users unless you or an Administrator share it. After the layout has been saved, you can click **Set Default**, which makes it the default view when you enter the Timesheet page in the future.

When creating a timesheet layout, keep in mind that multiple layouts can be created and saved. It can be beneficial for the user to create a layout for when they are entering data and another layout for when they are auditing the data entered.

After the layout has been modified, go into the Personnel field on the page and either begin typing the last name or use the drop-down menu to pull up a list of personnel.

The screenshot shows a software interface for entering time sheets. At the top, there are tabs for 'Personnel', 'Equipment', 'Material', 'Line Items', 'Details', 'Diary', and 'Attachments'. Below the tabs is a search bar and a table with columns: Unit #, Personnel Name, Personnel Code, Bill As, Cost As, Shift, Cost Code, ST, OT, DT, DTH, TT, LOA, and Day. A dropdown menu is open over the 'Personnel Name' column, displaying a list of personnel with columns for Name, Code, Classification, Region, and Status. The list includes: Aaron Brewst... (176689, .KC_Labourer ..., KC-LBSR, Alberta, Active), Aaron Frick A... (103391, .KC_Welder ..., KC-WDCWB, Alberta, Active), Aaron Pearso... (135800, .KC_Labourer ..., KC-LBSR, Alberta, Active), Aasen Michael (30998, Pipefitter - Jo..., PF-JM, Alberta, Active), Ababio Elvis (31038, Pipefitter - Jo..., PF-JM, Alberta, Active), Abdi Hirole Abdi (174112, .KC_Labourer ..., KC-LBSR, Alberta, Active), and Abdi Hussein (30937, Pipefitter - Jo..., PF-JM, Alberta, Active). At the bottom of the table, there are numerical values: .00, .00, .00, .00, .00, .00, .00.

The Bill As, Cost As, and Shift fields automatically populate with the default values specified for the person selected. However, if the person whose time is being entered is to be billed out or cost as another classification, the Bill As or the Cost As field(s) can be changed to the appropriate personnel classification to ensure the time sheet is invoiced and cost coded appropriately. For example, if a Journeyman is promoted for a day, since it is a temporary change to the classification, the Bill As field can be changed as needed on a single timesheet line/item without changing the person’s default classification.

6.1.0.3 Cost Code Field

Press the **Tab** key to go to the Cost Code field. Click the drop-down to display a list of cost codes defined for the selected project node (and any child WBS items). How the project is set up determines how the cost code list is shown.

The screenshot shows the same software interface as above, but with the 'Cost Code' dropdown menu open. The dropdown list contains the following items: '<Edit Cost Code List>', '2672/2875/2876/2877/00', '2672/2875/2896/2899/00', '2672/2875/2896/2900/00', '2672/2875/2914/2915/00', '2672/2875/2914/2924/00', and '2672/2875/2914/2924/1005'. The interface also shows the 'Personnel Name' dropdown menu from the previous screenshot.

The list of cost codes is embedded in a project path. This path is created by following the folder levels of the WBS structure so that the costs are allocated to the proper area. For example, if

If the path is 1/EXT/PIP/11.01, this means that the costs are going to Plant 1, Extraction Area, Piping, and Cost Code 11.01.

The next set of fields determines the billing type for the units. Dependent on the project contract, Personnel can be billed out for ST, OT, DT, DTH, TT, Day, and LOA.

If multiple personnel are being used for the job, click on the **Add Row** icon located on the ribbon bar to add a row, or use the **Tab** key to move all the way to the right of the page and press **Tab** again to generate a row.

Billings automatically copies most of the information from the previous row to a new row. To remove a row, click the **Delete Row(s)** icon located on the ribbon menu.

6.1.0.4 Equipment and Material Tabs

Perform similar steps to enter equipment on the Equipment tab, and materials on the Material tab. Both Equipment and Materials that appear from the drop-down list will be filtered if the project that the time sheet is being charged against has been set up to filter the Equipment or Material lists.

Unit #	Equipment	Code	Bill As	Cost Code	Measure	Quantity
101	Truck - 1/2T-1T Crew	101	Truck - 1/2T-1T Crew (13-01)		Hours	

Record 1 of 1

6.1.0.5 Line Items Tab

When there is data that needs to be entered, but it does not fall within the predefined units of measure on the Personnel, Equipment, or Materials tabs, you can enter it on the Line Items tab.

Line Item Assignment					Details							
Re...	Assigned to	Source	PO #	Cost Code	Description	Type	Measure	Quantity	Rate	Amount	Attachment	Attachment File Date
✓							Each					
										0.00	\$0.00	

The Line Items tab offers the flexibility to enter any other items that are related to the time sheet that do not neatly fall into the predefined categories of Personnel, Equipment or Materials. This can include expenses, premiums and allowances, surcharges, rental fees, or other additional fees that are related to the time sheet. If required, a line item can be assigned to a person (e.g., small tools allowance, equipment rentals, other premium, etc.), a piece of equipment (such as., repairs, additional charges), material (such as, a hauling charge), or entered as an Other line item.

The Line-Item tab lets you:

- Allot a Custom Description to the item
- Charge it to a cost code (required)
- Attach it to an applicable PO #
- Assign a unit of measure
- Track the quantity
- Key the rate instantaneously

6.1.0.6 Details Tab

The Details tab lets you capture any field notes associated with the time sheet and also enter data into any custom time sheet fields set up by the application administrator.

Additional time sheet details can be captured in the Diary tab.

When you're done entering data into the time sheet, click on **Apply** or **OK**.

The Park and Close fields affect time sheets that need to be put on hold or closed.

To view the Time sheets tab and all time sheets that have been created, select Timesheets > **Timesheets**.

The available columns on the time sheets tab are:

- Time sheet #
- Work Date

- Time sheet ID
- Job #
- Root Project
- Name
- Region
- Company
- Days
- Status
- Type
- Approval Status
- Close
- Created By
- Created Date
- Time sheet Total
- Modify By
- Modify Date
- Park

Creating a timesheet layout

1. Right click any column header and select **Column Chooser** to view this list.

You can then drag and drop any of the additional fields into the time sheet view or remove any fields that are not required.

You can control where the new column will be displayed in the grid by dragging and dropping the column headers in the desired location. You can also select **My Column Caption** to rename the column headers.

2. After you have created a layout with the columns relevant for data entry, you can save the layout by selecting the Layout drop-down from the top right side of the tool bar.

3. Click **Save As**.

The Save Layout As dialog box opens, and you can name the layout.

This layout is specific only to the user logged into Billings. It will not be available to other users unless it is shared by the user or an Administrator.

4. After the layout has been saved, the user can select Set **Default** which will make it the default view when they access the Timesheet page in the future.

6.2 CREATING A MULTI-DAY, MULTI-PROJECT TIMESHEET

Create a multi day, multi project time sheet

1. To create a multi-day, multi-project time sheet, go to Timesheets > **Timesheets**.

2. From the ribbon menu, click the **New** icon, and then select Multi-Project > **Daily**. A new Timesheet window opens.

3. Click the **Timesheet #** field and enter in the number of the time sheet.

You can leave the Timesheet # (T/S) field blank, in which case the Timesheet # will automatically generate from the database and will match the system-generated Timesheet ID.

4. Click the **Start Date** drop-down arrow and select the starting date of the time sheet (that is, the first day the work was performed or the first day of the shift).

The screenshot shows the top section of a Timesheet form. It includes the following fields:

- T/S ID: [Text Input]
- Job #: [Text Input]
- Start Date: [Date Picker] (Feb-01-2023)
- Ordered By: [Text Input]
- Location Billed To: [Text Input]
- Region: [Dropdown Menu] (Payroll (BMP & DSP))
- Number of Days on T/S: [Number Input] (5)
- Client #: [Text Input]
- Division: [Dropdown Menu]
- Company: [Text Input] with a three-dot menu icon to its right.

5. Adjust the **Number of Days on Timesheet** if needed.

6. Click the three dots icon next to Company field to select the client this work was done for.

This screenshot shows the same Timesheet form as above, but with a 'Companies' dialog box open over the Company field. The dialog box contains a table of available companies:

Name	Code	Relationship Type	Status
Company	COMP	Owner	Active
SemCAMS LLC	1063	Client	Active
Oviniv Canada LLC	1031	Client	Active
Canadian Natural Resources Limited	1061	Client	Active

The dialog also includes a search bar, a filter for 'Status = Active', and 'OK' and 'Cancel' buttons.

6.2.0.1 Personnel tab

The Personnel tab includes columns that might normally be hidden. To speed up the process of data entry, it is beneficial for you to include only the necessary columns.

6.3 CREATING A MULTI DAY, SINGLE PROJECT TIMESHEET

Create a Multi Day, Single Project time sheet

1. Go to Timesheets > **Timesheets**
2. From the ribbon menu, click the **New** icon, and then select **Single Project - Weekly**.

The screenshot shows the 'Timesheet - Single Day' form. At the top, there are fields for Project (DEMO/DEMO), Region (Alberta), Company (Mining Company), T/S ID, T/S #, Date (Jan-30-2023), and T/S Total (\$0.00). Below these are tabs for Personnel, Equipment, Material, Line Items, Details, and Attachments. The main area contains several text boxes for reporting injuries, incidents, and other information, along with a list of checkboxes for various work-related items like Safety Concerns, Work Performed, and Weather Conditions. At the bottom, there are buttons for 'Multi Line Entry...', 'Park', 'Close', and 'Last Created T/S #:', along with a 'New T/S after Apply' checkbox and 'OK', 'Cancel', and 'Apply' buttons.

3. Click the elipses icon located to the right of the Project field and select the project that this time sheet is for by using the Project Root or Code drop-down list.

This screenshot shows the same 'Timesheet - Single Day' form, but with a 'Project' dialog box open. The dialog box has a 'Project Root' dropdown set to 'KIEWIT DEMO' and a 'Code' dropdown set to 'DEMO'. Below these are several project names listed in a tree view: 'KIEWIT DEMO/DEMO', 'BMT Burnaby Mountain Tunnel(1892)', 'S7 Spread 7(2672)', and 'ST Sunas Terminal(2052)'. The 'KIEWIT DEMO/DEMO' item is highlighted. The dialog box has 'OK' and 'Cancel' buttons at the bottom. The background form is partially visible, showing the same fields and checkboxes as in the previous screenshot.

4. The project name is auto-filled. The Region, Division, and Company fields are automatically populated based on the project selected.

The screenshot shows a form with the following fields and values:

- Project: DEMO(DEMO)
- Region: Alberta
- Company: Mining Company
- Division: (blank)
- T/S ID: (blank)
- T/S #: (blank)
- Job #: (blank)
- Date: Jan-30-2023
- Ordered By: (blank)
- Location Billed To: (blank)
- Client #: (blank)
- T/S Total: \$0.00

5. If the selected project has been configured to use automatically generated time sheet numbers, skip to the next step. Otherwise, click on the **Timesheet #** field and enter in the number of the timesheet.

You can leave the Timesheet # field blank, in which case the value in the Timesheet # field is automatically generated by the database and matches the system-generated Timesheet ID.

6. Select the starting date of the time sheet (that is, the first day the work was performed or the first day of the shift).

The screenshot shows the same form as above, but with a date picker calendar open over the 'Date' field. The calendar is for January 2023, and the date '30' is selected. The 'Date' field now displays 'Jan-30-2023'. Below the calendar, there are columns for 'Cost Code', 'OT', 'DT', and 'DTH'.

7. Adjust the Number of Days on the time sheet if needed.

The Personnel tab includes columns that might normally be hidden. To speed up the process of data entry, it is beneficial for you to include only the necessary columns.

The Bill As, Cost As, and Shift fields automatically populate with the default values specified for the person selected. However, if the person whose time is being entered is to be billed out or cost as another classification, the Bill As or the Cost As field can be changed to the applicable personnel classification to ensure the time sheet is invoiced and costed appropriately.

For example, if a Journeyman is promoted for a day, since it is a temporary change to the classification, the Bill As field can be changed as needed on a single time sheet line or item without changing the person's default classification.

Press the Tab key to move to the Cost Code field.

Click on the drop-down arrow to display a list of cost codes defined for the selected project node (and any child WBS items). How the project is set up determines how the cost code list shows.

The next set of fields is used to capture the quantity of hours worked per type of hours. Depending on the project contract, personnel hours can be recorded against ST, OT, DT, DTH, TT, Day, and LOA.

If time for multiple persons is being used for the job, click on the **Add Row** icon located on the ribbon bar to add another row, or use the **Tab** key to move all the way to the right of the page and press **Tab** again to generate a row.

Billings automatically copies most of the information from the previous row to a new row. To remove a row, click on the **Delete Row(s)** icon located on the ribbon menu.

If you are entering the same data for multiple personnel rows, it is more efficient to use the multiline entry dialog box than manually entering individual rows. The multiline entry dialog box lets you select several personnel records and apply same cost codes, quantities, and units of measure to these rows in one step. If you select multiple cost codes, multiple rows are created for each personnel record and cost code record selected.

6.3.0.1 Equipment and Material tab

You can follow the same functionality to enter equipment on the Equipment tab, and materials on the Material tab that you followed for the Personnel tab.

Unit #	Equipment	Code	Bill As	Cost Code	Measure	Quantity
101	Truck - 1/2T-1T Crew	101	Truck - 1/2T-1T Crew (13-01)		Hours	

Record 1 of 1

Some columns are normally less used so they must first be added to the Timesheet layout before data can be entered into them. Right-click any column header, and then select **Column Chooser** to view this list. You can then drag and drop any of the additional fields into the Timesheet view or remove any fields that are not required.

You can control where the new column displays on the page by dragging and dropping the column header to the desired location.

Unit #	Personnel Name	Personnel Code	Bill As	Cost As	Shift	Cost Code	ST	OT	DT	DTH	TT	LOA	Day

Record 1 of 1

6.3.0.2 Line Items Tab

The Line Items tab offers the flexibility to enter any other items related to the timesheet but that do not neatly fall into the predefined categories of Personnel, Equipment or Materials. This can include

expenses, surcharges, premiums, allowances, or other additional fees that are related to the time sheet.

If required, you can assign a line item to a person (for example, small tools allowance, or equipment rentals, premium, or allowance), a piece of equipment (for example, repairs or additional charges), material (for example, hauling charge), or entered as an Other line item.

Line Item Assignment												Details	
Re...	Assigned to	Source	PO #	Cost Code	Description	Type	Measure	Quantity	Rate	Amount	Attachment	Attachment File Date	
							Each			0.00		50.00	

The Line-Item grid lets users:

- Allot a Custom Description to the item
- Charge it to a cost code (required)
- Attach it to an applicable PO#
- Assign a unit of measure
- Track the quantity
- Key the rate instantaneously
- Track the item against Project Commitments (See Assigning Commitments to Projects section of this guide)

Right click any column header and select Column Chooser to view this list. You can then drag and drop any of the additional fields into the time sheet view or remove any fields that are not required.

You can control where the new column will be displayed in the grid by dragging and dropping the column headers in the desired location.

Right click on the column header that you wish to rename and select My Column Caption option. If you wish to use the default name, blank out the custom name.

Once you have created a layout with the columns relevant for data entry, save the layout by selecting the Layout drop-down from the top, right side of the tool bar. If this is a new layout, select **Save As**. If you are saving changes to an existing layout, select **Save**.

6.3.0.3 Details tab

On the Details tab, you can capture any field notes associated with the time sheet, and enter data into any custom timesheet fields set up by the application administrator.

Personnel Equipment Material Line Items Details **Diary** Attachments

Upon completion of time sheet data entry, click **Apply** or **OK** at the bottom right of the page to save your changes.

Multi Line Entry... Park Close Last Created TJS #:

New TJS after Apply

The Park and Close fields affect time sheets that need to be put on hold or closed.

Creating a time sheet layout

1. Right click any column header on one of the timesheet grids and select Column Chooser to view a field list.

You can then drag and drop any of the additional fields into the time sheet view or remove any fields that are not required.

You can control where the new column will be displayed in the grid by dragging and dropping the column headers in the desired location. You can also select My Column Caption to rename the column headers.

2. You can control where the new column shows on the page by dragging and dropping the column headers to the location.

You can also select My Column Caption to rename the column headers.

3. After you have created a layout with the columns relevant for data entry, you can save the layout by selecting the Layout drop-down from the top right side of the ribbon bar.

4. Click **Save As**.

The Save Layout As dialog box opens, and you can name the layout.

This layout is specific only to the user logged into Billings. It will not be available to other users unless it is shared by the user or an Administrator.

5. After the layout has been saved, the user can select *Set Default* which will be the default view when they access the Timesheet page in the future.

When saving a layout, it is best practice to modify all the tabs (that is, Personnel, Equipment, Material, and Line Items) that will be used in the specific layout being saved.

6. After the layout has been modified, click into the Personnel Name field on the page and either begin typing the resource last name or use the drop-down list to pull up a list of personnel resources.

Name	Code	Classification	Description	Region	Status	00	05	10	15	20	25	30	35	40	45	50	55	60

Astron-Health	130000	Regulator - 30	HC-130	Astron	Active													

When entering time sheets into Billings, it is time effective for you to use the **Tab** key to move from column to column. When using the Tab key at the end of the last row, Billings automatically creates a new row and jumps to the first column in the new row, copying values from the last selected row.

To view the Timesheets tab and all time sheets that have been created, go to the menu list and expand the Timesheets option, then select **Timesheets**.

6.4 COPYING AN EXISTING TIMESHEET

You can copy an existing time sheet by following these steps:

Copy existing timesheets

1. Go to Timesheets > **Timesheets**.

2. Select the time sheet to be copied by clicking it once. If the timesheet you are looking for is not in the list, type in the time sheet number in the Timesheet # field to search for it. If you still cannot find the timesheet in the initial list, you may need to click the “Refresh” button on the ribbon bar to retrieve more matching timesheets from the database.

3. Click **Copy** from the ribbon bar.
4. Click **Special Paste**

Ensure Special Paste is selected and not Paste as Special Paste lets you control how the copy process is performed.

5. In section 1, choose the type of copy you want to make.

6. Section 2 automatically names the time sheet as “Copy of”, plus the original timesheet number. Change this to the new time sheet number if needed. Select the work date for the new timesheet. This section also contains the options of having the hours, quantities, line items, and time sheet notes pull in from the original timesheet it was copied from.

7. In section 3, select **Open the new time sheet**.

8. Click **OK**. The new time sheet opens. You can modify the time sheet as required with any information that needs to be changed.

6.5 IMPORTING A TIMESHEET

Billings lets you import multi-project or multi-day time sheets from a spreadsheet if the correct template is used.

Import a time sheet

1. Processes > Imports > **Timesheet Import**.

The time sheet Import window opens.

2. Click the **Create Import** button. The Import Definition dialog box opens, and you can specify the file containing the timesheet data that you want to import. Billings previews the file contents in the time sheet Header, Personnel, and Line Items tabs.

3. You can edit the data in the import window in Billings to correct any errors that are reported. After you have corrected the errors, click **OK** to revalidate the data. This lets you correct errors in the import file without having to edit the file itself.

This page intentionally left blank.

CHAPTER 7 – LEMS

7.1 Creating a LEM 140
7.2 LEM Details 143

7.1 CREATING A LEM

The standard Billings LEM process is called LEMs, which stands for labor, equipment and material reports. When selecting a project via the Project tab and managing the criteria, the criteria screen has two tabs, General and Project. Both need to be populated.

Create a LEM

1. Go to LEMs > **LEM**s.

The LEMs tab opens, listing all results previously generated LEMs.

Using exports allows you to save system data as a file. This file can then be imported into other applications to remove the need to double enter data and reduce entry errors

Drag a column header here to group by that column

Created	Document #	Description	Project Code	Project Name	Sequence Number	Batch ID	Date Range	Created By	Status

Record 1 of 22

2. To review the contents of a particular LEM, or for LEMs that require approvals, select the applicable result, and then double-click to open the LEM in its own LEMs Detail tab.

Depending on the process type, the Notes section can contain information regarding the outcome of the process. The contents of the resulting Details page varies by each process type.

3. If the LEM has not yet been approved, you can review the detailed results and remove any lines that should not be approved. After reviewing results, you can then approve the LEM, which in turn locks the underlying data from future edits.

This Export has not yet been approved. To mark it as approved, set the Status to Approved and fill in the export's Date Accepted value. Marking an export as approved is a permanent action and will make this record read-only. Marking an export as approved cannot be undone.

4. You can create a layout for the LEMs Detail page by selecting the Layout drop-down list on the right side of the ribbon bar.

5. Depending on the process, you can send the process results to a report or send the data to a file using the export-specific buttons at the bottom of the page. See the Report Export Options topic for more details on viewing the export details as a report.

OK Cancel

6. After you have reviewed or approved the export, click **OK** or **Apply** to save your changes and exit the page. If you want to cancel your changes, click **Cancel**.

7. To initiate a new instance of a LEM, select the **Create Process** icon located on the ribbon bar.

8 The LEMs Criteria screen opens with the General tab selected. This tab lets you set the LEM parameters that control the scope of the data that will be processed by the LEM process.

9. Use the Project tab to specify a specific job, or specify individually selected WBS items for a single job to limit the scope of the data processed by using the Limit Scope To section of the screen.

10. Click the **Submit** icon located on the ribbon bar when you are done setting the parameters and want to initiate the LEM process.

To check on the progress of your request, go to the Process Status page (Processes > **Process Status**).

To see your new request listed on the LEMs tab, click the Refresh icon located on the ribbon menu. You can also filter by project code to quickly find LEMs tied to a specific project.

7.2 LEM DETAILS

You can view the LEM details by double-clicking to open the LEM from the LEM register.

The LEM details page includes the document number, the date it was created, the last modified date, the description, status, and the date accepted. You can also view any notes and criteria linked to the LEM. If there are any related files, you can find the detail attachments in the attachments tab.

Description

The Description field lets you add context or explanations for individual LEM entries. When you view the LEM register, this information appears in the descriptions column, making it easy to see what each LEM is about at a glance. Use this field to include any quick notes or details that help you understand the purpose or scope of the LEM without having to open it.

Date Range

The value displayed is based on the first date and last date of records that were collected into the LEM. For example, If the criteria used was September 1-30, 2025, but the first records is for September 6, and the last record is for September 29, then the Date Range displays 2025-09-06 – 2025-09-29.

This page intentionally left blank.

CHAPTER 8 – INVOICES

8.1 Creating an Invoice146

8.1 CREATING AN INVOICE

An invoice records the transaction between a buyer and seller, and establishes the terms of payment.

Create an Invoice

1. Go to Invoices > **Invoices**.

The Invoices tab opens with a list of all previously generated invoices.

2. To review the results of a particular invoice process, or for invoices that require approvals, select the applicable result, and then double-click to open the invoice process in its own Invoices Details tab.

The screenshot shows the 'Invoices Detail' window. At the top, there is a 'Notes' section and a 'Criteria' section. Below these are fields for 'Description', 'Created', 'Modified', 'Status', and 'Date Accepted'. The main part of the window is a table with columns for T/S ID, Project, Project, Project, Project, WBS L1, T/S Job, Resour, Resour, Resour, Type, Resour, Line It, Custom, Bill As C, Bill As N, Cost As, Cost As, WBS Pa, UOM, Qty, Markup, Markup, Bill Rate, Bill Amo, and Generated L. The table contains 48 rows of data, including various labor and equipment entries. At the bottom, there are summary totals and buttons for 'OK', 'Cancel', and 'Apply'.

3. If the invoice has not been approved, you can review the results on the page and remove any lines that should not be approved. After the results have been reviewed, you can then approve the invoice, which in turn locks the underlying data from future edits. After you have reviewed or approved the export, click **OK** or **Apply** to save your changes and exit the page. If you want to cancel your changes, click **Cancel**.

Create a new Invoice

1. To initiate a request to generate one or more invoices, click the Create Process icon located on the ribbon menu

The screenshot shows a ribbon menu with several icons. The 'Create Process' icon is highlighted. Other icons include 'Delete Row(s)', 'Refresh', 'Print', and 'Print Preview'. The ribbon also has 'Layout' and 'Close' buttons.

The Invoices Criteria tab opens with the General tab selected. This tab lets you set the invoice parameters that control the scope of data that will be processed by the invoice process.

2. Use the Project tab to limit the process scope to one or more jobs; if only one job selected, you can use the Limit Scope To section to further the generation of the invoice(s) to specific WBS or Pay Items
 3. Use the Process tab to limit scope of the invoice generation to only specific LEMs (for example, only Approved but un-invoiced LEMs to be included)
 4. Click the Submit icon located on the ribbon menu when you are done setting the parameters and want to initiate the invoice process.
 5. To check on the progress of your request, use the Process Status page (Processes > Process Status).
- To view your new request on the Invoices tab, click the Refresh icon located on the ribbon menu.

This page intentionally left blank.

CHAPTER 9 – MANAGING MASS CHANGES

- 9.1 Retro Rate Adjustment 150
- 9.2 Generate Timesheet Line Items Wizard 153
- 9.3 Viewing Timesheet Locks 160

9.1 RETRO RATE ADJUSTMENT

Billings lets you reverse locked timesheets to process various adjustments, such as retroactive rate changes. The adjustment process generates locked credit time sheets that back out the previously locked time sheet information and create new timesheets with refreshed rates. The new timesheets let you to perform further edits before using the newly generated timesheets for LEMs, invoices or other system processes (exports).

Start a Retro Rate Adjustment

1. Select Processes > Adjustments > **Retro Rate Adjustment** or **Actuals Task Transfer Adjustment**.

The appropriate Adjustment tab appears for the adjustment process selected.

Using adjustment processes allows you to system generate credit and adjustment LEM entries for timesheet entries that have already been locked.

Drag a column header here to group by that column

2020-02-11 08:07:54	Retro Rate (14229)	Crystal Gerstel	Completed

2. Select the **Create Adjustment** icon.

The adjustment selection criteria dialog box opens. This dialog lets you set the filtering and adjustment specific parameters which will control the scope of the data selected for adjustment and any output formatting of data by the adjustment process. The filtering parameters and control parameters are unique to each adjustment process type.

Using adjustment processes allows you to system generate credit and adjustment LEM entries for timesheet entries that have already been locked.

3. Click the **Submit** icon located on the ribbon bar when you are done setting the parameters to initiate the adjustment. A dialog box opens indicating the process was submitted.

4. To check on the progress of your request, use the Process Status screen (Processes - **Process Status**).

To see your new request on the Retro Rate Adjustment tab, click the Refresh icon located on the ribbon bar.

9.2 GENERATE TIMESHEET LINE ITEMS WIZARD

It might be necessary to generate multiple time sheet line items based on a set of project rules. The Timesheet Line-Item Generator lets you create a time sheet with line items that are based on results of calculations based on entered set of criteria.

Generate time sheet line items

1. From the Timesheets page, click the **Generate Line Items** icon on the ribbon bar. The Generate Line Items wizard opens.

2. Click **Next** to continue.

3. Select the type of calculation logic you need to use for the line item generation and click **Next**. Select one of the following options.

The screenshot shows a window titled "Timesheets" with a sub-tab "Generate Timesheet Line Items". The main heading is "Line Item Parameters" with the instruction "Specify the type of calculation to use". Below this, a text box explains: "The line items are generated based on a set of calculation rules. You must specify which set of rules you wish to use to generate these line items:". There are four radio button options: "Set amount per hour worked" (which is selected), "Set amount per hour worked by type of time (ST, OT, DT, DTH, TT, LOA)", "Set daily amount if hours worked for that day exceed set threshold", and "Set daily or weekly amount based on daily and weekly minimum hours rules". At the bottom right, there are buttons for "< Back", "Next >", and "Cancel".

• Set the amount per hour worked – Calculates amount by multiplying total labor hours within a specified time by a preset hourly amount.

The screenshot shows the same "Generate Timesheet Line Items" wizard, but now the "Specify calculation details" section is active. It explains: "The Dollar Per Hour calculation type will apply the rate specified below to each and every hour worked by an individual during the specified data range and for the specified project(s).". Below this, it says "Please specify the amount of line item to be generated per each hour worked:" followed by a text input field and "\$/hr". There are two checkboxes: "Include Travel Time (TT) in calculation" and "Include Living Out Allowance (LOA) in calculation". At the bottom right, there are buttons for "< Back", "Next >", and "Cancel".

- Set amount per hour worked by type of time – Calculates the amount by multiplying various Labor hour totals grouped by unit of measure by a preset hourly amount set per type of time. Type of time refers to the Labor unit of measure (i.e., ST, OT, DT, etc.).

Timesheets - Generate Timesheet Line Items

Line Item Parameters
Specify calculation details

The Dollar Per Hour Type calculation type will apply the rates specified below to each and every hour worked by the type by an individual during the specified data range and for the specified project(s).

Please specify the line item amount to be generated per each hour worked:

<input type="text"/>	\$/hr of ST
<input type="text"/>	\$/hr of OT
<input type="text"/>	\$/hr of DT
<input type="text"/>	\$/hr of DTH
<input type="text"/>	\$/hr of TT
<input type="text"/>	\$/hr of LOA

Leave a rate blank or set it to 0 to exclude that type of hours from the line item calculation.

< Back Next > Cancel

- Set the daily amount if hours worked for that day exceed set threshold – Calculates a daily amount if the total Labor hours for that day meet or exceed a preset threshold.

4. Set daily or weekly amount based on daily and weekly minimum hours rules – calculates amounts based on day of week threshold hours rules. If Labor hours meet or exceed all daily thresholds then the weekly amount applies, otherwise daily amounts are calculated for all days that meet or exceed the daily thresholds. For days that do not meet the daily threshold, hourly amount applies.

For this calculation type, the date range is specified with a starting date and an indicator as to how many full weeks of data to use as source for the calculations.

The Daily/Weekly line item allows you to specify daily, weekly, and hourly thresholds and the line item amounts. By default, if an individual has worked the required number of hours on each specified day of the week, then the weekly line item amount will apply, otherwise daily line item amounts will be generated for the days that the work hours meet or exceed the daily thresholds. If daily threshold is not met, then the simple amount per hour

Weekly line item amount: \$ Use zero (0) threshold rule (*) Monday h

Daily line item amount: \$ Use zero (0) threshold rule (*) Tuesday h

Hourly line item amount: \$ Wednesday h

Include Travel Time (TT) in threshold calculation Thursday h

Include Living Out Allowance (LOA) in threshold calculation Friday h

(*) Zero (0) threshold rule: Saturday h
This rule creates and/or counts as eligible days/hours where threshold has been set to zero (0), but hours have been worked on that day. Sunday h

< Back Next > Cancel

5. Click **Next** to begin specifying the time sheet criteria to base the calculations on. The criteria include project(s), time sheet and time sheet Approval Status, and time sheet Work Date range. After you have specified the filters click **Next**.

Timesheets

Include timesheets that are: All Timesheets, or: Approved Locked Pending

Work date range: Jan-30-2023 to Jan-31-2023

< Back Next > Cancel

6. Select personnel filters, if any, and click **Next**.

Only projects with assigned personnel will let you filter by person.

7. The generated line items will attach to a newly created time sheet. In this step, provide details about the time sheet header as well as the generated time sheet Line Items, and click **Next**.

The Roll up calculated values to a single line-item option lets you summarize all generated line items to a single line item on the generated time sheet. This is a single line item that will not be associated with any personnel records.

8. Review your criteria and click **Next**.

The criteria preview content will copy to the Notes field of the generated time sheet.

9. The final step of the wizard displays the calculation results. Clicking the Finish button will open the Timesheet page with the generated time sheet.

The generated time sheet is not actually created in the database, and you will need to click **Ok** or **Apply** on the time sheet page to save it to the Billings database.

9.3 VIEWING TIMESHEET LOCKS

Timesheets can be locked by multiple processes in the system. The ability to understand which processes have locked a specific time sheet record is often helpful in troubleshooting a solution to fix a record that has been incorrectly captured. For example, if a time sheet record has been locked by a LEM process, but the LEM has not been issued to the client, then deleting the LEM process with that time sheet record on it lets you modify the record, as it becomes unlocked after the process has been

deleted. However, if one or multiple processes have locked a record, and they cannot be deleted, then any adjustments must be handled through an adjusting process.

View time sheet locks

1. Go to Timesheets > **Timesheet**.
2. From the Timesheets tab, select the time sheets you want to view, and then select the **View Locks** icon located on the ribbon bar.

The screenshot shows the 'View Locks' ribbon in the software interface. The ribbon includes buttons for 'New', 'Delete Row(s)', 'Refresh', 'Generate Line Items', 'View Locks', 'Create Template', 'Copy', 'Paste', 'Paste Special', 'Edit', 'Cut', 'Undo', 'Print', 'Print Preview', 'Send To', 'Save', 'Filter', 'View: All', 'Layout', and 'Close'. Below the ribbon, a table displays a list of timesheet records with the following columns: Timesheet #, Type, Timesheet ID, Job #, Root Project, Name, Region, Company, Work Date, Days, and Status. The table contains several rows of data, including timesheets for 'DEMO', 'Kennedy QA Test', and 'BL Project Code'.

Timesheet #	Type	Timesheet ID	Job #	Root Project	Name	Region	Company	Work Date	Days	Status
0000019390	Single Day Timesheet	0000019390		DEMO	KIEWIT DEMO(DEMO)	Alberta	Mining Company	Jan-17-2023	1	Open
0000019389	Single Day Timesheet	0000019389		Kennedy QA Test	Kennedy QA Test(Ken	Alberta	Tedmalson Electric & Cont.	Jan-15-2023	1	Open
Copy of 0000019386	Single Day Timesheet	0000019388		DEMO	KIEWIT DEMO(DEMO)	Alberta	Mining Company	Jan-14-2023	1	Open
0000019386	Single Day Timesheet	0000019386		DEMO	KIEWIT DEMO(DEMO)	Alberta	Mining Company	Jan-13-2023	1	Open
0000019385	Single Day Timesheet	0000019385		BL Project Code	BL Project Name(BL Pr	Alberta	SemCAMS ULC	Jan-11-2023	1	Open
0000019384	Single Day Timesheet	0000019384		180002	*SAMPLE PROJECT (1...	Alberta	Ovintrv Canada ULC	Jan-11-2023	1	Open
0000019383	Single Day Timesheet	0000019383		180002	*SAMPLE PROJECT (1...	Alberta	Ovintrv Canada ULC	Jan-10-2023	1	Open

3. A new tab opens listing the selected timesheet with the following columns available for cross referencing:

- T/S ID
- T/S #
- T/S Start Date
- T/S Type
- Approval Status
- T/S Status
- Parked

4. From the T/S ID column, click the **plus (+)** icon to view the selected timesheet results. The T/S Items tab opens with a list of all timesheet records within the timesheet selected.

The screenshot shows a software interface with a table of timesheet items. The table has the following columns: T/S ID, T/S #, T/S Start Date, T/S Type, Approval Status, T/S Status, and Parked. A single row is highlighted in green, representing a timesheet item with ID 0000019385, T/S # 0000019385, start date 2023-01-11, type Single Day Timesheet, approval status Approved, and status Open. The interface includes a top navigation bar with 'HOME', a toolbar with 'Refresh', 'Copy', 'Paste', 'Paste Special', 'Undo', 'Cut', 'Layout', and 'Close', and a filter bar at the bottom showing 'Record 1 of 1' and a filter for 'T/S # = 0000019385'.

T/S ID	T/S #	T/S Start Date	T/S Type	Approval Status	T/S Status	Parked
0000019385	0000019385	2023-01-11	Single Day Timesheet	Approved	Open	

5. Double-click the timesheet item you want to view to see which processes have locked or consumed that timesheet item.

CHAPTER 10 – REPORTS

10.1 Report Export Options164

10.1 REPORT EXPORT OPTIONS

Click the **Send To** menu option located on the ribbon bar at the top of the page, and then select either Grid or Pivot Grid. Depending on which report is opened, the Excel option can only be used when the report has first been exported to a **grid** or **pivot grid**.

If Grid is selected, the report data is pushed to a spreadsheet-like grid that lets you group, filter and sort the data and create basic mathematical group functions like summing, counting, averaging, etc.

Grouping is done by dragging a column header to the grey box located at the top of the window. Sorting is done by clicking on a column header. The first click sorts the data in ascending order, and the second click reverses the order.

You can use the first row of the data to apply filters to the data shown within the grid. Alternatively, you can use the quick filter, by clicking on the small funnel icon located on the right hand side of every column. This will show you a selectable list of values to filter.

All other functions are accessed through the Customization menu by right clicking on a column to bring up the Customization dialog box.

As with all other Billings grids, you can create and save custom layouts for the grid and pivot grid reporting views. After a layout has been created with the relevant columns, you can save the layout by selecting Layout from the top, right side of the tool bar.

Filters and sort order is also saved with the layout.

If Pivot Grid is selected, there are five view options to select from and more than one of these options can be selected at the same time.

Show Column Grand Totals	Show Column Totals
Show Custom Totals for Single Values	Show Grand Totals for Single Values

Show Column Grand Totals	Show Column Totals
Show Row Grand Totals	Show Row Totals
Show Totals for Single Values	

As with the Grid report, the data is displayed in a spreadsheet pivot- style, and it can be manipulated by dragging and dropping the columns around the page. You can customize the results by applying filters to headers, add or remove displayed columns using the customization pop-up menu, rename columns and saving layouts with these changes.

If Excel is selected, an Export to Microsoft Excel Document dialog box opens. Choose the destination the file should save to, and then click **Save**.

When the file is opened, you can edit or adjust the report as required through the Excel spreadsheet. Click the **Close** button to exit any of these reports. This will return you to the Report List grid.

10.1.0.1 Print Preview

Click the **Print Preview** icon located on the ribbon bar. If only one report is assigned to the process you are reviewing, the report will open by default. If there are multiple report options, a window will open listing all available reports. You can then double click on the desired report to open.

The screenshot shows a 'Print Preview' window for a report. The window title is 'Print Preview' and it contains a toolbar with various icons for printing, navigation, and zooming. The main content area displays a list of reports with the following columns: Report Name, Group, Notes, and Owner. The list includes various report types such as Activity Report, Attendance - LEM Discrepancies, Attendance Grid Report, Attendance Roster, Blank TS, Classification Audit, Classification List, Commitment Summary, DTC - Copy of Activity Report, DTC - Copy of Job Summary, Daily Crew Timesheet, Daily LBM, Detailed Payroll Entry Report, Equipment Audit, Equipment List, Incurred Commitments, Invoice Report, Job Summary, Labour Equipment Material, Material List, Next Day Timesheet, Payroll Audit Report (Multi Unit Columns), Payroll Audit Report (unit and quantity), Payroll Entry Report, Personnel Audit, and Personnel List. The status bar at the bottom indicates 'Page 1 of 2' and '100%' zoom.
