## Release 19.9 summary

This release of Compliance lets you attach documents to forms, gives you insights into button usage and increases the space to answer questions.

### Improvements summary

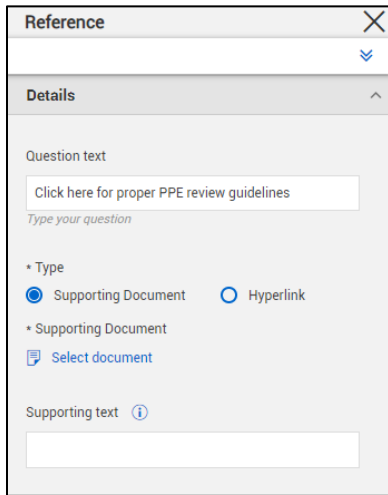

- **Supporting documents in forms** – The Link question type has been renamed Reference and now lets you attach supporting documents to forms. [Read more.](#)
- **Button question type usage details** – When an event has a button question that has been used, it will show the name of the person who selected it as well as the date and time it was selected. [Read more.](#)
- **Add timestamp to mobile photos** – Add a text timestamp to a photo taken on your phone to show users when the photo was taken. [Read more.](#)
- **Create notifications** – You can send notifications with messages to specific users, roles, projects or organizations.
- **Short Text answer character limit** – The answer character limit for the Short Text question type will increase from 150 to 200 to let you provide more information when answering.
- **Choice and List options character limit** – The options character limit for the Choice and List question types will increase from 150 to 200 to give you more space for information in the answer.

## Supporting documents in forms

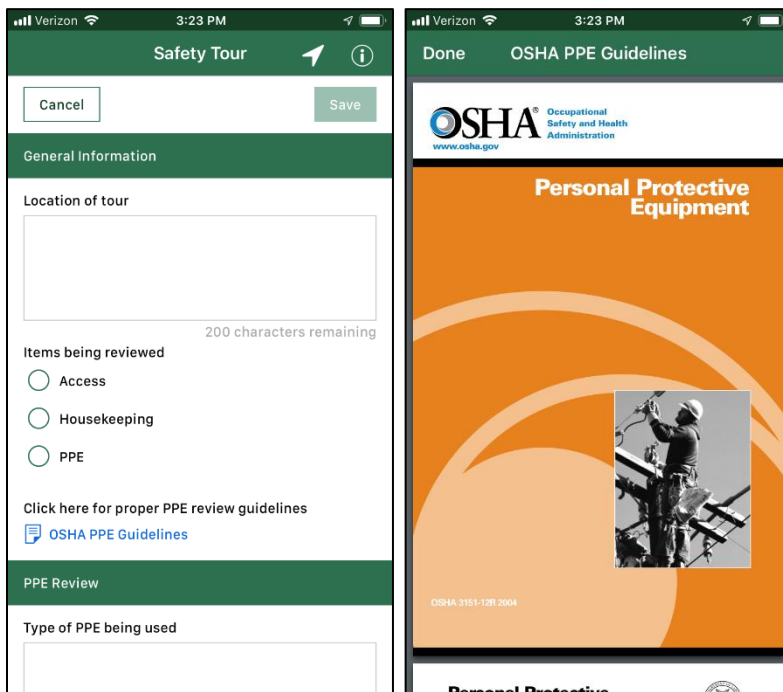

You can now attach supporting documents to forms to give users additional information that may not be accessible with a hyperlink. To support this change, the name of the Link question type has been changed to Reference. You can select whether a Reference is a Supporting Document or a Hyperlink.

**NOTE:**

The Supporting Document functionality of the Reference question type differs from the Attachment question type, which prompts the user to attach a file while filling out a form. A Supporting Document is provided by you to the user.

When you open a supporting document inside a form on mobile, it opens inside the app. When you open a document on the web, the file is downloaded.

## Button question type usage details

When a user selects a button in a form, you can now see who selected the button and the date and time they selected it below the button. You can find these usage details by opening the form through the Events list. The user's name and the time are below the button.

Each selection of a button is recorded as its own event. If a user selects a button multiple times, each event will show the date and time of that selection.

## Add timestamp to mobile photos

When taking a photo, you can now use the  plus icon in the mobile app to add a text timestamp to your photo. You can move the timestamp anywhere on the photo and use the  text icon to edit the timestamp's font, size and alignment.
