# What's new in Document 25.9

## Web Release Notes

- **Documents**
  - **Nominate a review status in bulk from Review register** – You can now nominate a review status in bulk when reviewing documents. Previously, you had to apply each status individually while on the review register. [Read more](#)
  - **Review and Release registers new column** – The Review coordinator column has been added to the Review and the Release registers.
  - **Collapse tool chest categories** – You can now collapse categories in the tool chest to make it easier to navigate through a large collection of mark up tools.
- **Administration**
  - **Central Administration new functions** – You can now use Central administration to add administrators to projects, create companies, and remove users from security groups.
  - **Skip remove and replace step when forcing inactivation** – When you force inactivation, you no longer must remove or replace users in roles, review teams, or forms. [Read more](#)
  - **Preview company logo** – You can now preview the company logo in real time to see how the logo will look on a form, mail item, or transmittal. [Read more](#)
- **Mail**
  - **Mail history** – The Mail module now includes a History tab, so you can see changes made to a mail item. The history includes when the mail item was sent, and for draft mail, when it was edited or deleted and status changes.
- **Transmittals**
  - **Mark transmittals as *Responded* in bulk** – You can now specify that a response has been received for transmittals in bulk from the Transmittals Sent items page. The Mark as button has been added to the Sent items page, so you can select multiple transmittals, and then mark them as *Responded* and enter a responded date. [Read more](#)
- **Forms**
  - **Manage reviewers on forms** – The new forms group setting Manage reviewers (Admin > Manage user access > **Forms**) lets you give users the ability to manage reviewers of a form. Previously, only the form initiator could manage reviewers. [Read more](#)

- **Download attachment option on Forms register** – You can now click the **Attachment** icon in the Forms register to download form attachments. [Read more](#)
- **Lots**
  - **Identify sublots on Lots register and Details pages** – The Lots module now has multiple ways to quickly identify lots and linked sublots. [Read more](#)
  - **Link Gallery items** – You can now link items in the Gallery to a lot.
  - **Process and Sub process dependencies in Lots configuration** – In the Process and Sub Process Configuration tables, you can now construct dependencies from subprocess to process instead of process to subprocess for better consistency with other dependencies in InEight Document. Dependencies created prior to release 25.9 are still valid. Starting with release 25.9 you must build the dependencies from subprocess to process.
- **Submittals**
  - **Complete review from Deliverables/Documents and Comments tabs** – The Complete review button has been added to the Deliverables/Documents and Comments tabs, so you can complete the review without having to go back to the Details tab.
- **Reports**
  - **Warning when running a report without filters** – When you try to run a report without filters, a warning message shows informing you that running the report could impact performance. You can then choose whether to proceed.
  - **Report on failed sign in attempts** – A new report shows failed sign in attempts made on a project.
- **InEight Document modules**
  - **Download disclaimer now shows when downloading** – When a download disclaimer is defined (Project settings > Disclaimer > **Download disclaimer**), it now shows when you download a document. Previously, the disclaimer showed only when you signed in to Document. [Read more](#)
  - **In list operator for filters** – You can now use an in list operator, that is, a list of values separated by OR statements, to filter values in a register. For registers that have advanced filtering, you can select the operator *In list* and then enter or copy and paste the values.
  - **Select multiple values to filter columns** – You can now select multiple values to filter column headers in registers when searching.
  - **Rearrange rows in dynamic tables** – You can now change the row order in a dynamic table. [Read more](#)

## Mobile Release Notes

- **Lots**
  - **Create new lots** – You can now create new lots while you are in the mobile app.

## Web release notes

### Documents

#### Nominate a review status in bulk from Review register

When you want to nominate a status for multiple documents, you can now select them from the Document > **Review** page, and then click Actions > **Apply review status**. The Apply review status dialog box opens, and then you can select the status. You can apply the status to the selected documents only or to all documents in the view.

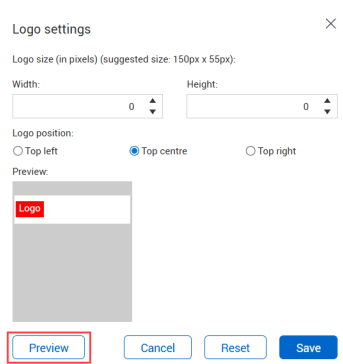

### Administration

#### Skip remove and replace step when forcing inactivation

A message notifies you that the inactive users were not removed or replaced and that this might affect project processes. You must remove the reviewers for the role, review team, or form to be valid.

#### Preview company logo

The Logo settings dialog box shows when you edit a logo on the company Details page and now includes a preview option.

When you click the **Preview** button, Document opens the templates to show how the logo will look in production. The preview has tabs for mail, forms, and transmittals.

## Transmittals

### Mark transmittals as Responded in bulk

Filter/Sort

Actions  Reply Reply all Forward Mark as 

<input type="checkbox"/>	Transmittal No	Sent	Responded	Subject
<input checked="" type="checkbox"/>	HCC-002269	13-03-24	NSK20240313-001	Refinement of design of bridge
<input checked="" type="checkbox"/>	HCC-001797	03-04-23		Refinement of design of bridge
<input type="checkbox"/>	HCC-001736	03-04-23		Refinement of design of bridge
<input type="checkbox"/>	HCC-003549	27-05-25		Refinement of design of bridge

When you select **Responded**, the Mark as responded dialog box opens, where you can enter the responded date and choose whether to update the response received dates for the recipients where received dates are not updated.

After you click **Save**, the items are marked as responded to, and the transmittals are removed from the statistics from the dashboard.

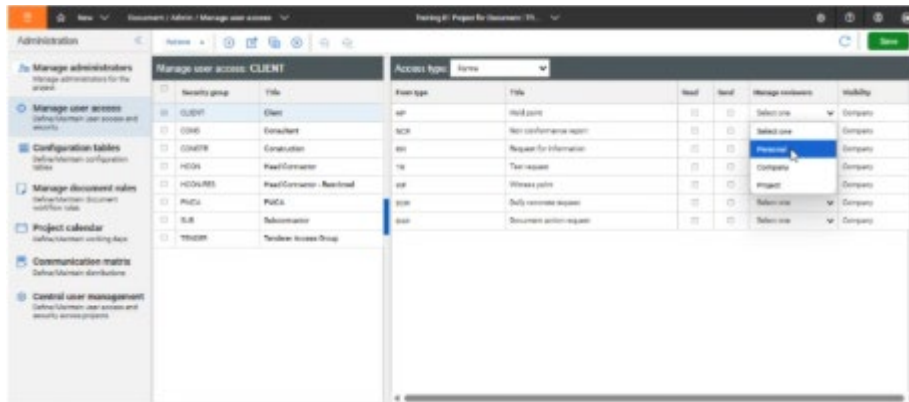

Marking transmittals as *Responded* in bulk reduces the dashboard statistics for transmittals with a response outstanding.

## Forms

### Manage reviewers on forms

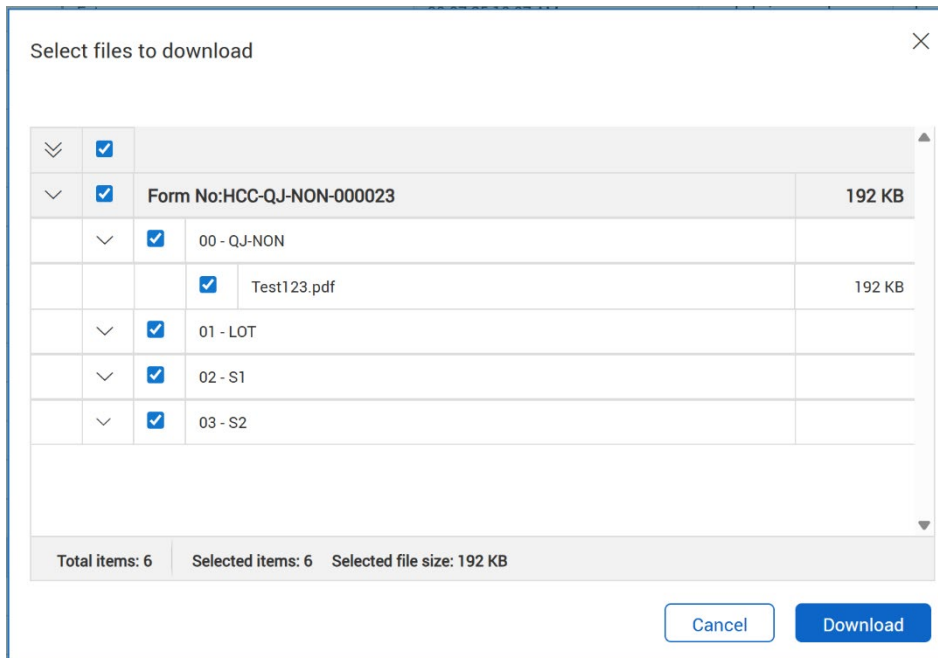

The Manage reviewers column has been added to the Forms security settings. For each form type, you can select whether the members of the security group can manage reviewers at the individual, company, or project level.

## Download attachment option on Forms register

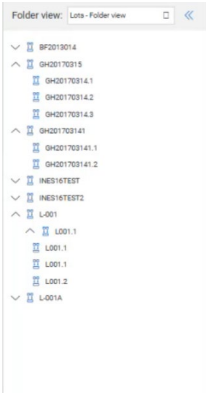

The Select files to download dialog box opens. Select the files you want to download, and then click the **Download** button.

## Lots

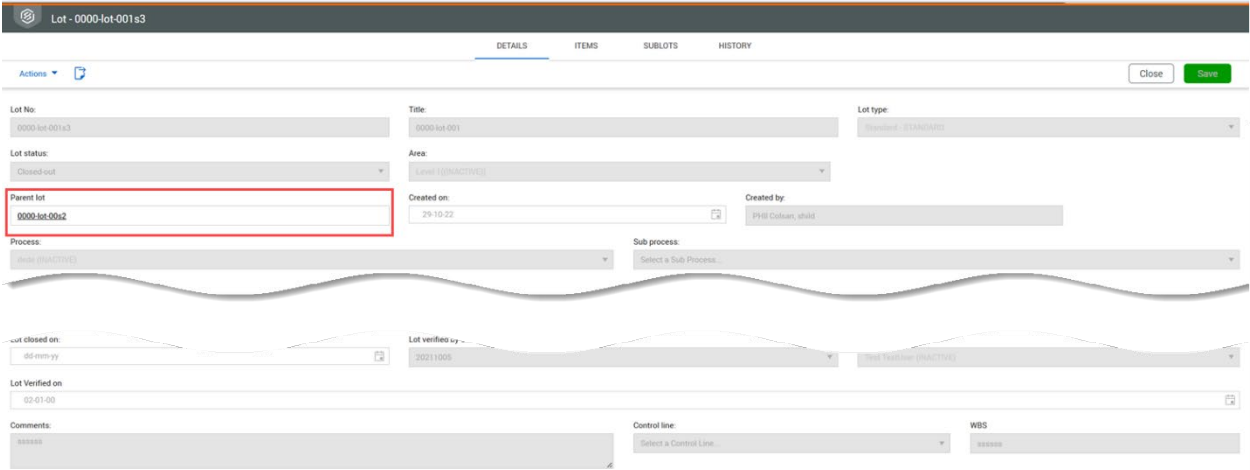

### Identify sublots on Lots register and Details pages

The new Lots folder structure shows lots and can be expanded to show the relationship between a lot and its linked sublots.

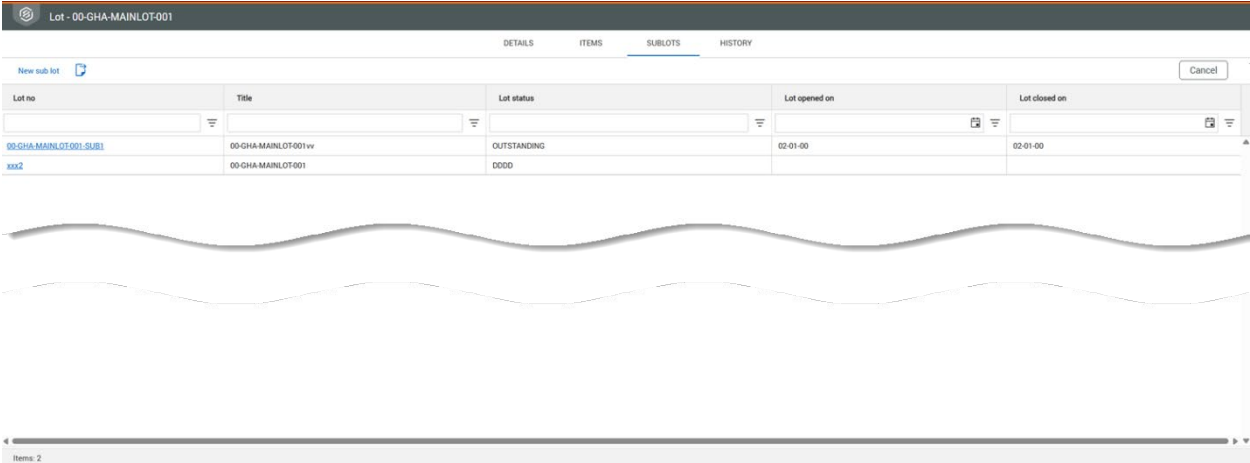

The Lot level column has been added to the Lots register to make it easier to see and quickly identify whether it is a lot or subplot.

The Parent lot field has been added to the Details page for sublots, so you can quickly identify the parent lot.

The Sublots tab, which lists all linked sublots, has been added for parent lots.

## InEight Document modules

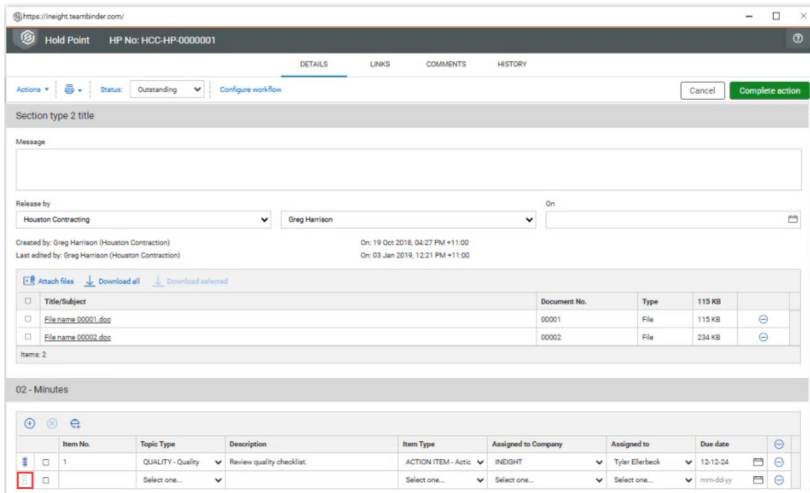

### Download disclaimer now shows when downloading

You must acknowledge the disclaimer before being able to download documents from the system.

If you do not want the download disclaimer to show when downloading, select the **Do not display this message** check box in the disclaimer. You are still required to acknowledge the disclaimer if it is changed by the administrator.

### Rearrange rows in dynamic tables

Previously, when you added a row to a dynamic table, its position was fixed. You can now click the **Move** icon for a row and then drag and drop it to its new position.

The screenshot shows the InEight Hold Point interface for a specific hold point (HP No: HCC-HP-0000001). The interface includes tabs for DETAILS, LINKS, COMMENTS, and HISTORY. The DETAILS tab is active, showing a message section with a text area and a release by field. Below this is a table of attachments with columns for Title/Subject, Document No., Type, and Size. The table contains two rows of attachments. Below the attachments is a dynamic table with columns for Item No., Topic Type, Description, Item Type, Assigned to Company, Assigned to, and Due date. The first row of the dynamic table is highlighted with a red box, indicating it is the row being moved.

Title/Subject	Document No.	Type	Size
File name 000001.doc	00001	File	115 KB
File name 000002.doc	00002	File	254 KB

Item No.	Topic Type	Description	Item Type	Assigned to Company	Assigned to	Due date
1	QUALITY - Quality	Review quality checklist	ACTION ITEM - Auto	INEIGHT	Tyler Ellerbe	12-12-24
