

InEight Estimate On-premise

2023.2 Release Notes

NOTE: These release notes include notable fixes or updates.

Estimate

- Previously, when multiple users tried to access the Estimate client on the same machine, an Access to the port is denied error message would show. In this release, multiple users can now successfully access the application without the error occurring.
- The issue is fixed that prevented the Job Consolidation services from correctly starting when the Estimate and Job Consolidation settings were configured to use separate SQL servers.
- When opening a Job workbook, the displayed progress bar can sometimes get stuck, and has been removed.
