API Detail

Direction		From Project Suite
Pagination		50,000 Rows
Frequency		All Reporting APIs are used by calling a GET method at an interval determined by the customer. InEight suggests using these APIs on an infrequent basis (once per day) to avoid potential performance impact to live systems when the returned data set could be large.
Trigger Method(s)		All default OData filters are supported
Average Payload Size		Depends on date range selected
APIM Name		SelfService_Contract_Vendor
Data Refresh/Delta/Incremental Loads		This API must be run as a full refresh each time
Project Suite	**Starting Version**	V1.0
	Ending Version	V1.01

Supported Filters

All default OData filters are supported by this API.
