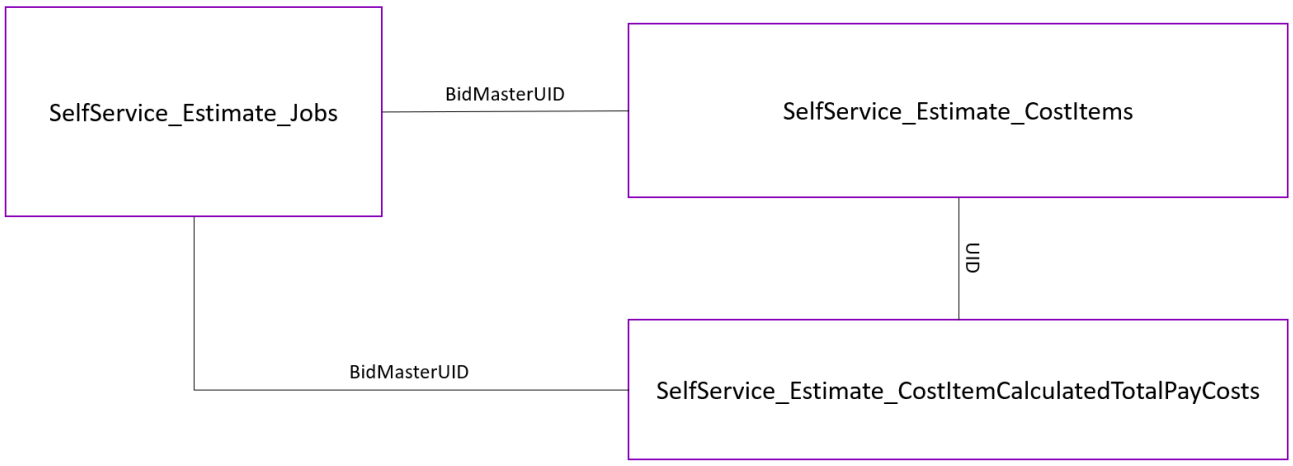
Overview

The ***SelfService_Estimate_CostItemCalculatedTotalPayCosts*** API is one of multiple APIs comprising the data contained in the Estimate Cost Item entity. A Cost Item is an item representing an activity for a scope of work being estimated. It is commonly a collection of resource employments, labor, equipment, material, etc., whose quantities are related to the amount or work or duration of the activity. The total cost of a Cost Item can be based on its detailed resource employments, or it can be a plug cost, or it can be determined from the proportional amount of an awarded quote. Cost Items have a position in a hierarchy of costs, all or which roll up to the Job level, which is the top level cost item representing the projects total estimated cost. Terminal level cost items are where all the costs in an estimate exist, either as detailed, plugged or quoted costs, and superior cost items are cost items having subordinate and/or terminal cost items belonging to them. Superior Cost Items do not contribute to the cost of the estimate but rather roll up the costs of all cost items belonging to them.

Data fields included in the ***SelfService_Estimate_CostItemCalculatedTotalPayCosts*** are the Total Cost values by Cost Category for Cost Items as derived by factoring the Cost Items Total Cost using the difference between the Forecast (T/O) Quantity and the assigned Pay Item Quantity.

Relationships and Dependencies

From: Table	To: Table	Relationship	Cardinality[1]	Comment
CostItemCalculatedTotalPayCosts (CICTPC)	Jobs (J)	CICTPC.BidMasterJobUID = J.BidMasterJobUID	M:1	
CostItemCalculatedTotalPayCosts (CICTPC)	CostItems (CI)	CICTPC.UID = CI.UID	1:1	



[1] *1:M = One to Many, 1:1 = One to One, M:1 = Many to one*

API Detail

Direction		From Project Suite
Pagination		50,000 Rows
Frequency		All Reporting APIs are used by calling a GET method at an interval determined by the customer. InEight suggests using these APIs on an infrequent basis (once per day) to avoid potential performance impact to live systems when the returned data set could be large.
Trigger Method(s)		All default OData filters are supported
Average Payload Size		Depends on date range selected
APIM Name		SelfService_Estimate_CostItemCalculatedTotalPayCosts
Data Refresh/Delta/Incremental Loads		The refresh of the data in this API is sync-based. The time it takes data to appear in this API is dependent on the load on the server at the time. If it takes more than 15 minutes, please submit a ticket with the Service Desk.
Project Suite	**Starting Version**	23.4
	Ending Version	N/A

Supported Filters

All default OData filters are supported by this API.

Data Validation

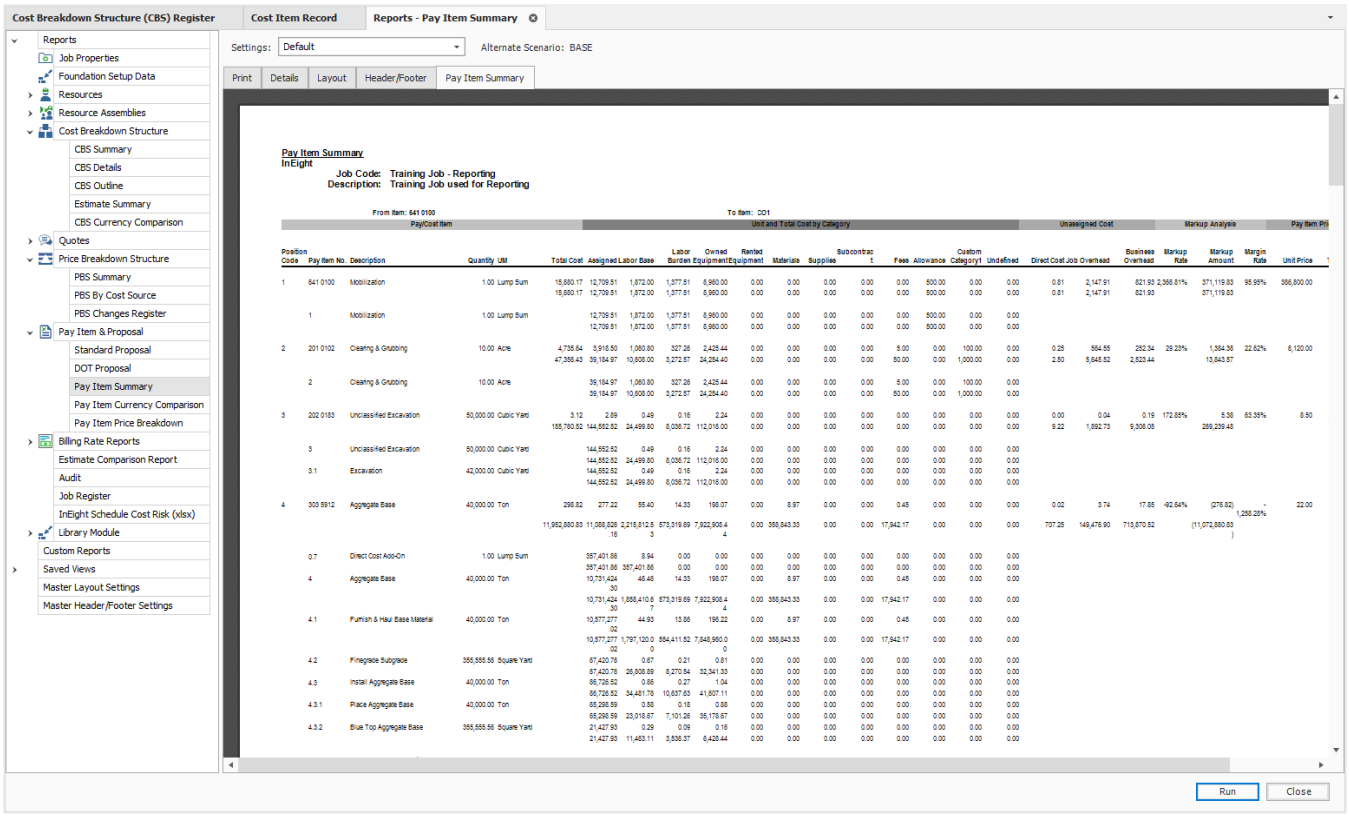
Pay Cost Data can be validated by running various reports that show the Cost Items Total Cost as factored by the difference between the Forecast (T/O) Quantity and the assigned Pay Quantity.


Figure 1: Pay Item Summary Report showing the factored Cost Item values
