Overview

The **SelfService_Estimate_CostItemsReferencedData** API is one of multiple APIs comprising the data contained in the Estimate Cost Item entity. A Cost Item is an item representing an activity for a scope of work being estimated. It is commonly a collection of resource employments, labor, equipment, material, etc., whose quantities are related to the amount or work or duration of the activity. The total cost of a Cost Item can be based on its detailed resource employments, or it can be a plug cost, or it can be determined from the proportional amount of an awarded quote. Cost Items have a position in a hierarchy of costs, all or which roll up to the Job level, which is the top level cost item representing the projects total estimated cost. Terminal level cost items are where all the costs in an estimate exist, either as detailed, plugged or quoted costs, and superior cost items are cost items having subordinate and/or terminal cost items belonging to them. Superior Cost Items do not contribute to the cost of the estimate but rather roll up the costs of all cost items belonging to them.

The Estimate Cost Item entity mainly includes three tables, *SelfService_Estimate_CostItems*, *SelfService_Estimate_CostItemsCalculatedValues* and *SelfService_Estimate_CostItemsReferencedData*.

The *SelfService_Estimate_CostItems* table contains Cost Items as created and managed within the Estimate application.

The *SelfService_Estimate_CostItemsCalculatedValues* table contains Cost Item data commonly calculated in some way for display purposes in the application and can provide a convenient way to reference data as it appears in the application without needing to transform it for display purposes.

The *SelfService_Estimate_CostItemsReferencedData* contains the values of the many foreign key lookup values stored in reference tables and can provide a convenient way to reference data as it appears in the application without needing to lookup the foreign key values from a lookup table.

Monetary values stored in the database are stored in their base currency and corresponding values displayed in the application have been modified based on the conversion factor of the items assigned currency.

Quantity values stored in the database are stored in their base measurement units and corresponding values displayed in the application are potentially modified based on the conversation factor of the items unit of measure

Relationships and Dependencies

From: Table	To: Table	Relationship	Cardinality ¹	Comment
CostItemsReferencedData(CIRD)	CostItems (CI)	CIRD.UIID= CI.UIID	1:1	

¹ 1:M = One to Many, 1:1 = One to One, M:1 = Many to one

SelfService_Estimate_CostItemsReferencedData

API Detail

Direction	From Project Suite	
Pagination	5,000 Rows	
Frequency	All Reporting APIs are used by calling a GET method at an interval determined by the customer. InEight suggests using these APIs on an infrequent basis (once per day) to avoid potential performance impact to live systems when the returned data set could be large.	
Trigger Method(s)	All default OData filters are supported	
Average Payload Size	Depends on date range selected	
API Name	SelfService_Estimate_CostItemReferencedData	
Data Refresh/Delta/Incremental Loads		
Project Suite	Starting Version	21.5
	Ending Version	N/A

Supported Filters

All default OData filters are supported by this API.

Field Descriptions

Name	Description	Example
EstimateCostItemReferencedDataId	Unique identifier assigned to each record in the table	1
EstimateCostItemReferencedDataUF	System generated field, for internal use only	N/A
EstimateCostItemReferencedDataUID	Unique identifier for a Cost Item record. Not visible in the interface.	EC614499-750F-4592-B75D-DAC50F4E3E66
AllocationSourceCostItemWbsCode	For allocated cost items, this value is the CBS position code of the Allocation Source Parent Cost Item where the Allocation is defined. This value can also be obtained using the Cost Items [AllocationSourceCostItemUID] field in the CostItems table and joining to the CostItems table.	23
AllocationTargetCostItemWbsCode	For allocated cost items, this value is the CBS position code of the Allocation Target. This value can also be obtained using the Cost Items [AllocationTargetCostItemUID] field in the CostItems table and joining to the CostItems table.	3
AlternateSecondaryUnitOfMeasureName	Description of the Base Name of a Cost Items selected <i>Secondary Unit of Measure</i> field value. This value can also be obtained using the Cost Items [AlternateSecondaryUnitOfMeasureUID] field in the CostItems table and joining to the UnitsOfMeasure table.	Cubic Meter

AlternateCode	Description of the Cost Items assigned <i>Alternate Code</i> selection as found on the Cost Item record and CBS Register. This value can also be obtained using the Cost Items [AlternateUID] field in the CostItems table and joining to the Alternates table.	BASE
AlternateUnitOfMeasureName	Description of the Base Name of a Cost Items selected <i>Unit of Measure</i> field value. This value can also be obtained using the Cost Items [AlternateUnitOfMeasureUID] field in the CostItems table and joining to the UnitsOfMeasure table.	Meter
CostItemAssemblyEmploymentCostItemAssemblyCode	Field for internal use only	Null
CostItemAssemblySourceCostItemWbsCode	For Cost Items in the CBS Register created from a Cost Item Assembly, this value is the CBS Position Code of the source cost item used in the definition of the Cost Item Assembly. This value can also be obtained using the Cost Items [CostItemAssemblySourceCostItemUID] field in the CostItems table and joining to the CostItems table.	0.11.1
CostItemAssemblyCode	For Cost Items used to define a Cost Item Assembly, this is the Cost Item Assembly Code field value of the Cost Item Assembly record found in the Cost Item Assembly register. This value can also be obtained using the Cost Items [CostItemAssemblyUID] field in the CostItems table and joining to the CostItemAssemblies table.	RW01
CostSegmentDescription	Description of the Cost Items <i>Cost Segment</i> field value as found on the Cost Item record and CBS Register. This value can also be obtained using the Cost Items [CostSegmentUID] field in the CostItems table and joining to the CostSegments table.	Direct Cost
CostSourceDescription	Description of the Cost Items <i>Cost Source</i> field value as found on the Cost Item record and CBS Register. This value can also be obtained using the Cost Items [CostSourceUID] field in the CostItems table and joining to the CostSources table.	Detail
CurrencyName	Description of the Cost Items assigned <i>Currency</i> selection as found on the Cost Item record and CBS Register. This value can also be obtained using the Cost Items [CurrencyUID] field in the CostItems table and joining to the Currencies table.	U.S. Dollar

Commented [AC1]: @Cyrus, this field doesn't appear to be populated? Would have expected this to be the foreign key value of CostItemAssemblyEmploymentUID.

CurrentBudgetCurrencyName	Current Budget values Currency description.	U.S. Dollar
CurrentBudgetUnitOfMeasureName	Current Budget values Unit Of Measure description.	Cubic Yard
DefaultAccount2Code	Field for internal use only	Null
DefaultAccount3Code	Field for internal use only	Null
DefaultAccountCode	Description of the Cost Items <i>Account Code</i> selection as found on the Cost Item record and CBS Register. This value can also be obtained using the Cost Items [DefaultAccountCodeUID] field in the CostItems table and joining to the Accounts table.	1010
DefaultBondRateTableTableName	For a Bond Cost Item record, description of the selected Bond Rate Table found on the Cost Item record. This value can also be obtained using the Cost Items [DefaultBondRateTable] field in the CostItems table and joining to the RateMaster table.	EXAMPLE: GENERAL CONSTRUCTION
DefaultCostCurveDescription	Description of the Cost Items <i>Cost Curve</i> field value as found on the Cost Item record and CBS Register. This value can also be obtained using the Cost Items [DefaultCostCurveUID] field in the CostItems table and joining to the CostCurves table.	Linear
DistributionSourceCostItemWbsCode	For allocated cost items, this value is the CBS position code of the Allocation Source Cost Item being distributed. This value can also be obtained using the Cost Items [DistributionSourceCostItemUID] field in the CostItems table and joining to the CostItems table.	23.1
OriginalBudgetCurrencyName	Original Budget values Currency description.	U.S. Dollar
OriginalBudgetUnitOfMeasureName	Original Budget values Unit Of Measure description.	Cubic Yard
ParentWbsCode	For subordinate cost items, this value is the CBS position code of the Cost Item parent. A value of 0 indicates a level 1 Cost Item belonging to the Job row in the CBS Register. This value can also be obtained using the Cost Items [ParentUID] field in the CostItems table and joining to the CostItems table.	4.3
PayItemPayItemID	Description of the Cost Items Pay Item assignment <i>Pay Item Number</i> field value as found on the Cost Item record and CBS Register. This value can also be obtained using the Cost Items [PayItemUID] field in the CostItems table and joining to the PayItems table.	202 0183

QuantityDriverDescription	Description of the Cost Items <i>Quantity Driver</i> field value as found on the Cost Item record and CBS Register. This value can also be obtained using the Cost Items [QuantityDriverUID] field in the CostItems table and joining to the QuantityDrivers table.	Superior CI
QuantityRollUpCode	Description of the Cost Items <i>Quantity Roll Up</i> field value as found on the Cost Item record and CBS Register. This value can also be obtained using the Cost Items [QuantityRollupUID] field in the CostItems table and joining to the QuantityRollups table.	200
QuoteGroupDescription	Description of the Cost Items <i>Quote Group Tag</i> field value as found on the Cost Item record and CBS Register. This value can also be obtained using the Cost Items [QuoteGroupUID] field in the CostItems table and joining to the QuoteGroupTags table.	Sign Work
RevenueTimingDescription	Description of the Cost Items <i>Revenue Timing</i> field value as found in the CBS Register. This value can also be obtained using the Cost Items [RevenueTimingUID] field in the CostItems table and joining to the RevenueTimings table.	Percent Complete
SecondaryUnitOfMeasureName	Description of the Cost Items selected <i>Secondary Unit of Measure</i> field value as found in the CBS Register. This value can also be obtained using the Cost Items [SecondaryUnitOfMeasureUID] field in the CostItems table and joining to the UnitsOfMeasure table.	Cubic Yards
UnitOfMeasureName	Description of the Cost Items selected <i>Unit of Measure</i> field value as found on the Cost Item record and CBS Register. This value can also be obtained using the Cost Items [UnitOfMeasureUID] field in the CostItems table and joining to the UnitsOfMeasure table.	Linear feet
UserTag1Code	Text value appearing in Cost Items <i>Tag 1</i> dropdown list. This fields value can also be obtained using the Cost Items [UserTag1UID] field in the CostItems table and joining to the UserTags table	Estimator 1
UserTag2Code	Text value appearing in Cost Items <i>Tag 2</i> dropdown list. This fields value can also be obtained using the Cost Items [UserTag2UID] field in the CostItems table and joining to the UserTags table	Roadway
UserTag3Code	Text value appearing in Cost Items <i>Tag 3</i> dropdown list. This fields value can also be obtained using the Cost Items	Sample tag value

	[UserTag3UID] field in the CostItems table and joining to the UserTags table	
UserTag4Code	Text value appearing in Cost Items <i>Tag 4</i> dropdown list. This fields value can also be obtained using the Cost Items [UserTag4UID] field in the CostItems table and joining to the UserTags table	Sample tag value
UserTag5Code	Text value appearing in Cost Items <i>Tag 5</i> dropdown list. This fields value can also be obtained using the Cost Items [UserTag5UID] field in the CostItems table and joining to the UserTags table	Sample tag value
UserTag6Code	Text value appearing in Cost Items <i>Tag 6</i> dropdown list. This fields value can also be obtained using the Cost Items [UserTag6UID] field in the CostItems table and joining to the UserTags table	Sample tag value
UserTag7Code	Text value appearing in Cost Items <i>Tag 7</i> dropdown list. This fields value can also be obtained using the Cost Items [UserTag7UID] field in the CostItems table and joining to the UserTags table	Sample tag value
UserTag8Code	Text value appearing in Cost Items <i>Tag 8</i> dropdown list. This fields value can also be obtained using the Cost Items [UserTag8UID] field in the CostItems table and joining to the UserTags table	Sample tag value
UserTag9Code	Text value appearing in Cost Items <i>Tag 9</i> dropdown list. This fields value can also be obtained using the Cost Items [UserTag9UID] field in the CostItems table and joining to the UserTags table	Sample tag value
UserTag10Code	Text value appearing in Cost Items <i>Tag 10</i> dropdown list. This fields value can also be obtained using the Cost Items [UserTag10UID] field in the CostItems table and joining to the UserTags table	Sample tag value
UserTag11Code	Text value appearing in Cost Items <i>Tag 11</i> dropdown list. This fields value can also be obtained using the Cost Items [UserTag11UID] field in the CostItems table and joining to the UserTags table	Sample tag value
UserTag12Code	Text value appearing in Cost Items <i>Tag 12</i> dropdown list. This fields value can also be obtained using the Cost Items [UserTag12UID] field in the CostItems table and joining to the UserTags table	Sample tag value
UserTag13Code	Text value appearing in Cost Items <i>Tag 13</i> dropdown list. This fields value can also be obtained using the Cost Items [UserTag13UID] field in the CostItems table and joining to the UserTags table	Sample tag value
UserTag14Code	Text value appearing in Cost Items <i>Tag 14</i> dropdown list. This fields value can also be obtained using the Cost Items	Sample tag value

	[UserTag14UID] field in the CostItems table and joining to the UserTags table	
UserTag15Code	Text value appearing in Cost Items <i>Tag 15</i> dropdown list. This fields value can also be obtained using the Cost Items [UserTag15UID] field in the CostItems table and joining to the UserTags table	Sample tag value
UserTag16Code	Text value appearing in Cost Items <i>Tag 16</i> dropdown list. This fields value can also be obtained using the Cost Items [UserTag16UID] field in the CostItems table and joining to the UserTags table	Sample tag value
UserTag17Code	Text value appearing in Cost Items <i>Tag 17</i> dropdown list. This fields value can also be obtained using the Cost Items [UserTag17UID] field in the CostItems table and joining to the UserTags table	Sample tag value
UserTag18Code	Text value appearing in Cost Items <i>Tag 18</i> dropdown list. This fields value can also be obtained using the Cost Items [UserTag18UID] field in the CostItems table and joining to the UserTags table	Sample tag value
UserTag19Code	Text value appearing in Cost Items <i>Tag 19</i> dropdown list. This fields value can also be obtained using the Cost Items [UserTag19UID] field in the CostItems table and joining to the UserTags table	Sample tag value
UserTag20Code	Text value appearing in Cost Items <i>Tag 20</i> dropdown list. This fields value can also be obtained using the Cost Items [UserTag20UID] field in the CostItems table and joining to the UserTags table	Sample tag value
UserTag21Code	Text value appearing in Cost Items <i>Tag 21</i> dropdown list. This fields value can also be obtained using the Cost Items [UserTag21UID] field in the CostItems table and joining to the UserTags table	Sample tag value
UserTag22Code	Text value appearing in Cost Items <i>Tag 22</i> dropdown list. This fields value can also be obtained using the Cost Items [UserTag22UID] field in the CostItems table and joining to the UserTags table	Sample tag value
UserTag23Code	Text value appearing in Cost Items <i>Tag 23</i> dropdown list. This fields value can also be obtained using the Cost Items [UserTag23UID] field in the CostItems table and joining to the UserTags table	Sample tag value
UserTag24Code	Text value appearing in Cost Items <i>Tag 24</i> dropdown list. This fields value can also be obtained using the Cost Items [UserTag24UID] field in the CostItems table and joining to the UserTags table	Sample tag value
UserTag25Code	Text value appearing in Cost Items <i>Tag 25</i> dropdown list. This fields value can also be obtained using the Cost Items	Sample tag value

	[UserTag25UID] field in the CostItems table and joining to the UserTags table	
WorkersCompOverrideDescription	Text value of the Cost Items <i>Workers Comp Override</i> selection as found on the Cost Item record and CBS Register. This value can also be obtained using the Cost Items [WorkersCompOverrideUID] field in the CostItems table and joining to the WorkersCompOverrides table.	Bridge work 20 Ft high
BidMasterJobUID	Identifier of the Job record from the Jobs table in the BidMaster database. This field is not unique in this table but is unique to an instance of a Job. Not visible in the application.	5376AA5E-8C85-43E8-9ACB-D7422000E832
BidMasterJobCode	Value of the Job Code field. This field value can also be found in the Code field of the Jobs table using the [BidMasterJobUID] field and joining to the Jobs table.	Training Job
LastUpdateID	Field for internal use only	663
IsActive	Indicates if record is active. Please note: records will become inactive if a user un-syncs a job from Estimate application	1
CreatedByld	System generated Id, will always represent the system, not actual users. This field is for internal use only.	1
CreatedDate	Date/timestamp record is entered	2022-02-21 17:47:05.492 3658 +00:00
ModifiedByld	System generated Id, will always represent the system, not actual users. This field is for internal use only.	1
ModifiedDate	Date/timestamp record is modified	2022-02-21 17:47:05.492 3658 +00:00

Commented [AC2]: used in conjunction with SaveID and used to determine if a record has changed and needs to be updated when a save is invoked, prevents updating all data on a save event
