Overview

The ***SelfService_Estimate_QuoteScopeItems*** API provides records for Quote Scope Items, which are the qualifications a vendor has made to their quote. The available scope items for a quote are defined by the Quote Group, and on the Quote the scope items provide a way for users to indicate such inclusions or exclusions and adjust the quote if desired. In Quote compare & Award, Scope Items can be used to help make a meaningful comparison among vendor quotes in any particular quote group.
