

| Master Data Library     | Products that use the Library |          |         |      |          |          |        |            |             |        |          |       | Considerations  |
|-------------------------|-------------------------------|----------|---------|------|----------|----------|--------|------------|-------------|--------|----------|-------|---|
|                         | Platform                      | Estimate | Control | Plan | Progress | Contract | Change | Compliance | Completions | Design | Billings | Model |   |
| Account codes           |                               |          | X       | X    |          | X        |        | X          | X           | X      |          |       | Contract - account codes are only used for bid packages (not contracts).<br>Plan - account codes are associated at the claiming scheme level.<br>Compliance/Completions - account codes are consumed through the integration with Plan components.  |
| Attributes              | X                             |          |         | X    |          |          |        | X          | X           |        |          |       | What attributes will be used on a project is determined at the project level.<br>Products that use disciplines, commodities, and their attributes will only draw from the values assigned to the project.<br>Compliance/Completions - attributes are consumed through the integration with Plan components.   |
| Contacts                |                               | X        |         |      |          | X        |        |            |             |        |          |       | When a vendor is assigned to the contract, if the vendor has a contact defined, you can select the Vendor contact under additional details on the contract's Header tab.  |
| Cost categories         |                               |          | X       |      |          |          | X      |            |             |        |          |       | Change uses cost categories for cost items on the Pricing tab.  |
| Cost centers            |                               |          | X       |      | X        | X        |        |            |             |        |          |       | Both Control and Progress (through Time Center) may use a unique budget code that includes cost center as one of the segments of the code. (For example, JW Edwards uses cost centers as a unique code identifier.)<br>Cost center data is stored under org settings > Progress > Time Center.  |
| Currencies              |                               |          | X       |      |          | X        |        |            |             |        |          |       | These are the only products that have direct use of currencies. Other products use currency indirectly, in the sense that they inherit the project's default currency.  |
| Disciplines             |                               |          | X       | X    |          | X        |        | X          | X           |        |          |       | What disciplines are used on a project is determined at the project level. Products that use disciplines, commodities, and their attributes will only draw from the values assigned to the project.<br>Contract - available both for bid packages and contracts.<br>Compliance/Completions - disciplines are consumed through the integration with Plan components. |
| Commodities             |                               |          |         | X    |          |          |        | X          | X           |        |          | X     | What commodities are used on a project is determined at the project level.<br>Products that use disciplines, commodities, and their attributes will only draw from the values assigned to the project.<br>Compliance/Completions - commodities are consumed through the integration with Plan components.   |
| General ledger accounts |                               |          |         |      |          | X        |        |            |             |        |          |       |   |
| Incoterms               |                               |          |         |      |          | X        |        |            |             |        |          |       |   |
| Markets                 |                               |          |         |      |          | X        | X      |            |             |        |          |       | Used by Contract and Change to control what Contract Templates are available for the project.   |
| Operational resources   |                               |          | X       | X    | X        | X        |        | X          | X           |        |          |       | Control - uses operational resources indirectly, based on resources employed on timesheets in InEight Progress. The rates from those resources drive the Estimated Actual Costs for the related cost items in Control.<br>Contract - uses equipment and materials<br>Compliance/Completions - uses employees and equipment  |
| Payment terms           |                               |          |         |      |          | X        |        |            |             |        |          |       |   |
| Payroll indicators      |                               |          |         |      | X        |          |        |            |             |        | X        |       | While payroll indicators are created at the master level, the majority of their properties are defined at the project level.  |
| Project value types     |                               |          |         | X    |          |          | X      | X          | X           | X      |          |       | At the project level, project values types are given project values and organized into a project structure, where they can be used by other InEight products.   |
| Qualifications          |                               |          |         |      |          |          |        |            |             |        |          |       |   |
| Revenue categories      |                               |          | X       |      |          |          | X      |            |             |        |          |       |   |
| Unions                  | X                             |          |         |      | X        |          |        |            |             |        |          |       | Progress - used on employee operational resources.  |
| Units of measure        |                               |          | X       | X    | X        | X        | X      |            |             | X      |          |       |   |
| Vendors                 |                               | X        | X       | X    | X        | X        |        | X          | X           | X      | X        |       | Contract pushes vendors on contracts to the Assigned vendor list for the project.<br>Progress only has visibility into vendors that are assigned to cost items in Control.  |
