21.10.4 Release Notes

NOTE:

These release notes include notable fixes or updates in the stated products. If no notes are shown for a product, there are no notable changes for that product.

Contract

- Organization-level templates default to On for project-level use in Contract and Change.
- Tax is calculated correctly when the payment invoice line item quantity is changed.
- Contract types that are a not master agreement no longer consider irrelevant columns when saving the default view.
- The Master agreement Remaining to buy column calculates correctly when there are associated contracts assigned to the master agreement.
- Tag IDs are no longer updated when new tags are created for the available tag list, so contract documents that are uploaded and published do not stall.

Control

- The Forecast t/o qty is now saving consistently when being modified through copy and paste, or one by one in the UI.
- The actuals import for generic and Excel are no longer getting stuck in processing.
- The code is now fixed to correctly set the default settings for Forecast method by allow as-built for new projects.

Plan

- The operator field in a saved filter now consistently shows all options.

Report

- The Summary Report by Schedule ID report has been modified to use the IsActive status so component steps show correctly.
- The equipment description and equipment category are now show in the Daily Plan Timesheet.
- The Crew performance report has been modified to use the settings as determined if a quantity is approved for daily plans.
