21.12.1 Release Notes

NOTE:

These release notes include notable fixes or updates in the stated products. If no notes are shown for a product, there are no notable changes for that product.

Change

- Row density settings have been standardized to show more rows with narrow and tight density. Relaxed shows 30 rows per request, Narrow shows 35 rows per request, and Tight shows 40 rows per request.
- The Updated values are not reflected at all levels banner is no longer shown after issue values are updated correctly in the PCO.
- Audit log entries are no longer generated when workflow is on, and issues are submitted for approval.
- The link to the stored file no longer breaks when you edit the title of a supporting document.
- All issues with data from all available columns in the Issue log are now able to be exported.

Compliance

- The query timeout for the events and tasks lists was increased from 30 seconds to 2 minutes so large numbers of activities can be returned.
- In the Document report, null values in the sort field no longer create unexpected white space and time formatting have been removed from date-only columns.
- The Incident Summary Log now shows text in the correct language for all fields.
- You are now able to select languages other than English on the iPad.
- The email method was updated to ensure users receive event/task grid exports.
- Email notifications are now triggered only when a form response is changed.
- In the Events list, rows with similar string values are now sorted they are no longer duplicated.
- When copying a section with more than one leading logic, the question ID is not changed for the existing question and parent question so that leading logic rules are shown as expected.
- A page initialization issue was fixed so that the print report feature now works.
- When an event title has a period in it, printing now works.
- A change event trigger has been added for both the Date Time picker and date input, so the placeholder date and time value does not reset automatically.
- Reverse form flow button text is now shown in the correct language.
- The way URLs are read for scheduled items has been changed so forms consistently show correctly.
- Form flow termination is now calculated on level 2 and above so form flow buttons now correctly show as being clicked.
- All hierarchy data is now consistently stored for saved activities.

Contract

- Columns on the Master agreements Associations footer now align properly to their columns
- The default currency is now maintained when creating a new contract.
- You can now import decimal values into master agreements.
- Material Characteristics type name is no longer causing Purchase orders to fail in the SAP ERP system.
- The SoV unit price calculation now rounds correctly.
- When the Contracts register is filtered by Vendor, it is also ordered by Contract ID to avoid missing or duplicating records.

Control

- A Back button has been added in the Add Pay Item step in a pay item's first contract adjustment, which takes you back to the Select Pay Item step.
- Code has been corrected to remove inactive users from the connection table after 24 hours.
- The pay item locked field is now being retained correctly when modified in the Pay item details slide-out panel.
- The sum of the adjusted cost categories now correctly matches the total adjusted CB cost.
- The lock indicator is now showing correctly for pay item fields.
- The revised budget move now backs out cost appropriately.
- When a pay item is assigned to a cost item through the Excel import, or by copy and paste, the pay item's forecast (T/O) qty values now updates automatically.
- A budget move can now be approved when a cost item is added to both the From and To sides of the screen.
- The code is now corrected to allow for a cost item to contribute to the rollup value in a cost category, for a CE.
- The scroll position performance has been improved when you perform an action.
- Editing of Forecast T/O qty is now retaining values correctly, and not timing out.
- Subtotal amounts in data blocks are now aligned with the column.
- When the cost category detail slide-out panel is open, and you are going from one account code to another account code, the tab is now updating correctly.
- The collapsing structure in the CBS no longer removes the applied filters.
- When a dollar rate is entered in project library against undefined labor, it now shows in the total roll up.
- The entry of CE total cost in cost categories no longer reverts to zero.
- The code has been updated so that the active and inactive cost category amounts contribute and show correctly.
- When an Excel import is performed, the quantity on the resource is no longer zeroed out.
- The selective import no longer fails when importing fuel types that contain a parenthesis.
- The live forecast snapshots are now being taken when the fiscal month ends.
- The forecast cost G/L change no longer contains a mismatching calculation with the tooltip in the CBS.
- The code is now fixed to allow a live forecast custom data block name to include apostrophes.

- Selected cost items in the Claim multiple CBS quantities dialog are now being retained correctly when using the search function.
- When the actual cost and MHR sync is executed, the cost is no longer posting twice to Control.
- Maintenance CE cost is now available to be included in the budget json.
- Code has been modified to allow for the send of the scheduled sync's actual quantity the second time it is executed.
- Code has been corrected to not create the same estimate resource twice during the selective import process.

Plan

- Duplicate components are no longer being created.
- The Quantity tracking component data block has been redesigned so its rows are always aligned with the claiming grid.
- In Quantity tracking, when switching between components, the correct percentage complete value is assigned.
- When exporting project configurable values in Quantity tracking, comparison of Excel column names no longer causes an error.
- When the claiming scheme column is removed from an Excel template, the claiming scheme associated to a WBS is now used.
- Step and Component details data block rows are now consistently aligned.
- Changes were made in Plan to mitigate the issue of draft work packages being duplicated in InEight Document.

Platform

- The code has been updated to only show active UoMs that can be selected for the measurement type.
- The cell formatting in affected Excel columns of the Master account code template have been changed to correctly reflect the values entered.

Progress

- In Daily plan web, when the column chooser is selected and any other changes are made in the grid, like resizing a column, previously saved data is maintained.
- Daily plans can no longer be edited after approval as expected.
- In Progress mobile, planning phase quantities are now rounded off with three decimal place precision.
- In the Progress mobile timesheet, when tapping Apply hours to a selected employee, a busy indicator is now shown so you cannot select an employee cell before the dialog box is shown. This allows hours to be properly updated.
- During rejection of a mobile daily plan, unsynced resources are now migrated to prevent duplicate records in the Time and Extra Pay Report.
- When saving in Weekly time sheet and duplicate records are present, the ability to save is restricted and an error is shown to prevent duplicates being created in Time center.
- In Time center, you can now copy a copied Weekly time sheet record with a changed date.

Report

- The Injury Illness form date mapping has been modified to match the front-end application and back-end Geo data.
- Performance enhancements have been made to the Parameter Stored Procedures to prevent the report from timing out.
- Duplicate translations were fixed in the Construction Progress Summary report Collapse/Expand option drop-down list.
- The default Ariba status parameter values have been updated to populate in the Contract Integration Status report.
- Code was fixed to correctly show images in the Work Plan Package report.
- Mapping has been updated to provide the English translation for the table value.
- Localization for custom labels has been updated in the Crew Performance report.
- Formatting has been fixed in the Daily Cost Performance report when Planned values is set to Show.
- The entity change logic has been disabled for the Plan Component ODS table and reverted to the full and interim refresh logic until further review.
