

InEight Cloud Platform

21.5.1 Release Notes

NOTE:

Included are notable fixes or updates in stated products. If no notes are displayed for a product, this means that there are no notable changes.

Control

- User sessions were expiring when there was not a timeout specified. Now, user sessions do not time out unless specified.
- When modifying cost items with a different currency than project default, the equations were not applying correctly.
- The excel import would not complete if there more than 1000 cost items. The process has been improved to run more efficiently.
- The pay item user defined 1 field's custom label was not displaying in the pay item tab.
- Projects were locked after an attempt to import estimate to existing job in Control due to descriptions over 250 characters causing an error. Now, descriptions over 250 characters will be trimmed instead of erroring.

Platform

- Employees with End Dates in the past were appearing in the Project Employee assignment dialog box. Now the employees with End dates in the past won't be available for the assignment to the project.

Plan

- Some work plans were not being created in InEight Document. Now, a name for a work plan does not exceed 40 characters (the shortest length allowed in Document). This change will not impact the Plan user directly, but rather the data being sent to Document.
- After a Chrome update, the Claiming Scheme pop-up columns were not properly aligned, and text boxes were not visible in the safety and quality grids. These issues have been resolved.

Progress

- When switching the foreman in View By executor option, the daily plans were not shown properly.
- When copying from previous week in the UTC -6 time zone and the first week of daylight saving, the copied hours shifted one day before while saving. The date conversion logic has been updated to work the same for all time zones.

Report

- Not all issues were appearing on the Vendor Issue report. The report has been modified to show all vendor issues using the new table structure.
- The 'Rule Type' field has been added to the Claiming Scheme by WBS report. Rule type is the plan field that shows the type of step, for example construction or quality step.
- On the Procurement Status lookahead report, records from deleted bid packages were still appearing on report. The "Last ODS refresh" information has been added to the report header so the user can see when the data was last refreshed.
