21.5.2 Release Notes

NOTE:

Included are notable fixes or updates in stated products. If no notes are displayed for a product, this means that there are no notable changes.

Change

- In certain instances, the Supporting Document notes were not saving.
- The Word template download function was not properly working at the Organization level.

Contract

- In certain instances, the Contract status workflow was failing.
- When in a contract, the filter by WBS element function was intermittently not working as expected.
- The Custom Cost Center Description could not be saved from the Line Item detail window but could be saved from the Line Item grid. The issue occurred because a selection was required from the drop-down list. Now the Cost Center Description can be added from the drop-down list and as a custom value in the Line item details and grid.
- When saving from the Bid package overview tab, both RemainingFloatDays and TotalAvailableFloatDays were reset to 0.
- When double-clicking the resize handle icon of the checkbox column, the checkbox column disproportionately widened.
- There was an issue when replacing the default Custom Field column status with the saved column status, due to a conflict when checking Custom Field columns.
- There were missing validations for enabling/disabling the "Save and Start Approval" and "Execute and Publish" buttons which need to be executed when the save button is clicked, while staying in VCO Details tab. Appropriate validations have been added.
- When VCO was started for approval and an error existed on a line, the VCO was getting stuck in a loading sequence.
- In certain instances, a Change Order could not be submitted for approval because the VCO Line-Item ("New") was being inserted without a line-item type. The BE calculation algorithm has been modified to correct.

Control

- Account codes were not always updating properly with excel import.
- Scheduled syncs in Project settings were not consistently running.

Compliance Web

- When moving a section in a template in between two other sections, the display was not properly refreshing.
- On the Injury/Illness form, the logic was not correctly working. The existing logic was removed on split sections because the logic set data was inactivated. Now, logic set records are inactivated only when split section question is available in logic rule.

Report

- The Crew Performance report was not consistently showing Hours and Massive Mhr Loss.
- An additional parameter has been added to the Daily Plan Note summary to allow users to include or exclude photos.
