21.5.3 Release Notes

NOTE:

Included are notable fixes or updates in stated products. If no notes are displayed for a product, this means that there are no notable changes.

Change

- The Schedule Impact and Construction Area columns were missing in the exported Excel spreadsheet.

Contract

- Some cost items did not save correctly to the database against the existing bid packages.
- While trying to generate a contract document from a template, the Vendor Address only showed the vendor country, not the whole address.

Control

- When the project's budget was locked, the current budget cost and the original budget cost fields were not populated.
- For cost items where actual cost was claimed on cost categories that previously had zero cost, the rollup value did not correctly calculate.
- There was a currency error encountered when a cost item was copied, and the original cost item had been linked to a Contract.
- Forecasts at the terminal CI did not match rollups in Snapshots.
- The Forecast rollup for a cost item did not recalculate when actual cost was incurred in a cost category other than the existing set of non-zero cost categories.
- When the markup amount was null the Estimate to Control push failed.
- When doing an excel import, the forecast t/o qty, did not update.

Compliance

- Email selections disappeared after saving.

Progress

- There was a mismatch in bulk edit numbers because the AND operator between two criteria in a saved query was changed to OR when the saved query was selected.
