21.7.4 Release Notes

NOTE:

These release notes include notable fixes or updates in the stated products. If no notes are shown for a product, there are no notable changes for that product.

Change

- The document subtype is now required in the Add documents dialog box when adding multiple documents from InEight Document.
- The WBS column in the Issue details has been widened to accommodate longer WBS text.
- The WBS column has been widened to accommodate longer WBS text, and the code was updated to reduce the amount of padding before truncation starts.
- A future release will fix issues with pricing details not showing in the Pricing summary grid. If pricing details are not showing, have your System Administrator contact InEight to restart the API services.
- A future release will fix issues with the executed CCO ID not showing in the Change register. If pricing details are not showing, have your System Administrator contact InEight to restart the API services.
- Pricing information in an issue is now carried over when a CCO is generated. The transaction type ID is also checked when updating pricing details.

Contract

- The standard ISO time format is now used to convert dates and times on the Accruals/Receipts tab.
- Decimal values are now accepted as valid values when importing from Excel.
- Duplicate contract types are no longer showing in the project settings drop-down lists.

Control

- When updating a resource in the library associated to more than 100 cost items, the system no longer times out when pushing all the updates.
- When a project imports the start and finish dates via the cost item Excel import process, the dates are now correctly reflected in the time phased forecast window.
- If a cost item is modified from terminal to non-terminal or vice versa, then the committed cost rollup is now being correctly calculated.
- When schedule dates are imported for more than 1000 cost items, the process now completes successfully.
- When the time phased forecast sync is pushed, a snapshot of the live forecast data is now being retained to correct the live forecast not being sent.

Report

- The Plan Status report now correctly filters projects when a user has access to only one project and the filter is set to all projects.
