22.8.3 Release Notes

NOTE:

These release notes include notable fixes or updates in the stated products. If no notes are shown for a product, there are no notable changes for that product.

Change

- The custom field labels and values now show in the SOV tab.

Compliance

- The mobile application was updated and now it is stable and functions normally.

Contract

- The code was updated, and now the templates created at organization level are no longer duplicated at the project level.
- Logic was updated and now WBS category, phase codes, and GL codes import correctly to the line items in the register.
- Bulk editing is now working correctly. When you click to save the changes to multiple items, all items are saved.
- The code was updated and now the invoice and payments update and show correctly.
- VCOs now update all line items successfully and show in the main line item grid when executed.
- The code was updated to calculate tax from Project/Org settings when there is no tax for the line item.
- The default value for ERP integrations is now added for new customers. This change lets you disable the ERP Integrations when no contracts exist.
- The code was updated and now the correct dates show in Payment form and Invoices view.
- The custom field labels and values now show in the SOV tab.

Report

- The Cost Report by Cost Category Period report filters have been modified to correctly show the earned cost values.
- Logic has been added in the Plan Activity report to check for Account Code Group usage.
- The Crew Communicator Summary report mapping has been fixed to load all expected parameters.
- In the Daily Plan Print Version report, the General discussion note field has been extended to 1000 characters.
- In the Buyout Review report, the IsActive status filter has been corrected to populate the Forecasted Final Cost field.
- The Daily Plan Summary report filters have been modified to correctly group and show hours.
