CHAPTER 1 – SCHEDULE OVERVIEW

Overview of the Schedule And Risk Process

InEight Schedule is a (CPM) Critical Path Method planning and risk management tool. It provides multiple tools to support planning and risk management throughout the lifecycle of a project.

Schedule contains six primary schedule views: Plan, Markup, Schedule Review, Cost Risk, Short Interval Planning, and Risk Register. These views correspond to different processes of the Scheduling ecosystem:

Project View	Description
Plan	Create, detail, and plan out the CPM schedule.
Markup	Assess, critique, and provide feedback on the planned CPM schedule.
Schedule Review	Consolidate markups, conduct risk analysis, and update the CPM Schedule based on review.
Cost Risk	Consolidate markups, conduct risk analysis, and update cost based on review.
Short Interval Planning	Conduct short interval planning, detailing daily work for crews and short term plan to get the CPM Activities done.
Risk Register	Risk Matrix tracking all project events surfaced throughout the planning, markup, review, and execution phases of the Project Schedule.

To access each view, open a schedule and go to the menu bar at the top left of the screen.

Plan View

When you open a schedule, you land on the project’s Plan view. In this view, you can see the schedule details (such as activities, work package groupings, dates, duration, and float) where you can create, detail and plan out the CPM schedule.

- 1 Contains customizable Gantt chart columns providing a summary view of schedule details including, but not limited to, activity/work package description, dates, durations, float, and cost.

- 2
- This Gantt chart provides a visual layout of scheduled activities, work packages, and milestones over time. The Gantt chart also has integrated functionality allowing users to adjust dates, schedule logic, and schedule critiques.
- 3
- The Iris contains the fine details of the schedule. Activities, work packages, and milestones that can be detailed out with specific constraints, tags, resources, reviewers, short interval planners, and events. Additionally, the Iris also houses the Smart Planning AI functionality which references and pulls in Knowledge Base information into project work packages and activities.

You can [import](#) or [export](#) a schedule in Plan view.

Gantt chart legend

Vertical Bar Type	Description
Project start 	The planned or actual project start dates
Data date 	The point in time when the status of the schedule is recorded
Project finish 	The planned or actual project finish dates

Horizontal Bar Type	Description
Dark grey 	WBS
Light grey 	Completed activity
Black outline, white center 	Planning package
Orange 	Baseline activity

Horizontal Bar Type	Description
Green	LOE
Blue	Non-critical activity
Red	Critical activity

Markup View

The Markup view is where project contributors assigned to activities and work packages can provide feedback on the current planned schedule. You can also assess, critique, and provide feedback on the planned CPM schedule.

- 1 Gantt chart columns contain activity metadata: ID-description, dates, remaining duration, total duration, delta [change in] remaining duration, delta [change in] end date, and completed [markup status].
- 2 This Gantt chart provides a visual layout of how the schedule would be affected by the markups provided.

- 3

This section contains the markup score card. The score card is a quick way for project contributors to increase, decrease, or confirm the dates and durations for the schedule items assigned. Additionally, project events (such as risks, opportunities, and ideas) can be provided as feedback by contributors.

Schedule Review View

Project View	Description
Schedule Review	Consolidate markups, conduct risk analysis, and update the CPM Schedule based on review

After the project contributors have finished providing their markups, the Review view is where all the feedback is consolidated. Schedulers can take the information and can begin to conduct risk analysis on the schedule, adjust durations, and associate risk events.

- 1

Gantt chart columns show the original start and finish dates but can have the uncertainty and events from the markups switched on and off to show the changes and impacts to the schedule.
- 2

This Gantt chart provides a visual layout using bars that adjust dependent upon the uncertainty and risk applied. In the right-most columns of the Gantt chart are the icons to access the risk histogram and tornado charts.

- 3** The Iris in this view shows details regarding the markups provided, giving a quick glance at the distribution data from multiple contributor markups. Additionally, the Inference Engine, Human Intelligence, and Risk Intelligence data are housed here to aid in the review process.

With the feedback provided, users can adjust the schedule to reflect the appropriate markups and/or conduct risk analysis with the uncertainty and various events provided.

Cost Risk View

Project View	Description
Cost Risk	Consolidate markups, conduct risk analysis, and update cost based on review

The Cost Risk view is where all the feedback is gathered and consolidated for cost items. When you bring in your cost structure, you can begin to conduct risk analysis on the budget using uncertainty and risk events.

The screenshot shows the InEight Cost Risk View interface. The top navigation bar includes 'InEight | 23.12 Regression testing', 'Schedule /', 'MPP Import /', and 'Cost Risk'. Below the navigation bar is a toolbar with icons for Views, Up/Down arrows, and a 'Run simulation' button. The main content area is divided into three sections:

- Table Section (Left):** A table with columns: ID, Description, Actions, Exclude, By Cost %, Max Cost, and Max Cost %. The table lists various activities and milestones, such as 'Start Milestone A1700', 'Activity A1670', 'Activity A1730', 'Start Milestone A1700', 'Finish Milestone A1720', 'Activity A1670', 'Activity A1750', 'Start Milestone A1700', 'Activity A1670', 'Activity A1740', 'Activity A1730', 'Finish Milestone A1720', 'Activity A1680', 'Activity A1680', 'Activity A1690', and 'Activity A1690'. The 'Actions' column is highlighted with a red box and a circled '1'.
- Uncertainty/Events Section (Middle):** A table with columns: Uncertainty, Events, Register, and a bar chart icon. The 'Events' column is highlighted with a red box and a circled '2'.
- WBS Sum Act Section (Right):** A section titled 'WBS Sum Act' containing input fields for 'Min (\$)', 'Likely (\$)', 'Max (\$)', 'Min (%)', 'Likely (%)', and 'Max (%)'. A bar chart is also present in this section, with a red box and a circled '3' highlighting it.

- 1** Columns for Cost Item information that shows actual, remaining, and totals of items prior to simulations with the option to display risk adjusted amounts based on user selection.

- 2
- Provides toggles to turn on or off uncertainty or events and view events assigned to cost items. Users can also view the risk histogram and tornado chart post simulation runs.
- 3
- The details are shown regarding markups provided, giving a quick glance at the distribution data. With the feedback provided, users can conduct risk analysis with the uncertainty and various events provided.

Short Interval Planning View

Project View	Description
Short Interval Planning	Conduct short interval planning, detailing daily work for crews and short term plan to get the CPM Activities done

In the Short Interval Planning view, schedulers and field execution planners can plan out their day to day work. CPM activities brought in from the Planning view can be broken down into steps and tracked for progress. Crews can be established with specific production rates and goals.

- 1
- Contains all work packages, activities, and steps listed with dates and durations.
- 2
- This visual represents how steps and crew activity are spread out over the coming weeks. Additionally, the original CPM dates have duration bars shown so users can

visually see when steps to complete an activity vary from the baseline CPM schedule dates.

Risk Register View

Project View	Description
Risk Register	Risk matrix tracking all project events surfaced throughout the planning, markup, review, and execution phases of the project schedule

The Risk Register is where the schedule’s risk events, matrix settings, uncertainty values are stored and set.

- The Project Register Events tab summarizes all events on the project. Events can be selected and deselected and edited in this register.

A screenshot of the 'PROJECT REGISTER EVENTS' table. The table has 17 columns: Active, Event Id, Title, Type, Description, %, Dur, \$, Score, Risk Own..., Mitigation, Status, Markup, Schedule, Cost, Publish, and a circular icon. Two rows are visible. The first row, with Event Id 'R1', has a green background for the % and \$ columns. The second row, with Event Id 'O1', has a light blue background for the % and \$ columns. The 'PROJECT REGISTER EVENTS' tab is highlighted with a red box in the navigation bar above the table.

Active	Event Id	Title	Type	Description	%	Dur	\$	Score	Risk Own...	Mitigation	Status	Markup	Schedule	Cost	Publish	
☒	R1	Rapid river water	Threat	crane on a barge	Extremely Low	Very Low (≤ 40d)	Very Low (≤ \$50K)	1	Garl...	Bring the cran	Mitigated		1			
☒	O1	Rent equipment for 50% off	Opportunity	overbought!	Ultra Low (5%)	Ultra Low (≤ 7d)	Ultra Low (≤ \$...	1	Garl...		Unmitigated					

The Microsoft Excel import tool lets you import new or updated register events and their activity associations.

- The Project Register Matrix tab shows the attributes available for up to nine events created in the project. These are the default values available when entering data for an event.

There is also an opportunity color column which shows a blue scale to help differentiate various opportunities. The Opportunity Color scheme shows throughout the application where opportunities are presented.

PROJECT REGISTER EVENTS PROJECT REGISTER MATRIX PROJECT UNCERTAINTY

Number of ranges
9

Description	Probability	Schedule Impact	Cost Impact	Threat Color	Opportunity Color
Ultra Low	5	7	1000		
Extremely Low	15	20	25000		
Very Low	25	40	50000		
Low	35	50	75000		
Medium	50	60	100000		
High	65	100	1000000		
Very High	75	120	5000000		
Extremely High	85	160	7500000		
Ultra High	95	180	10000000		

For example, in the Project Register Events page, the Opportunity in the second row shows three different color ranges that are associated with the Opportunity Description in the Project Register Matrix.

PROJECT REGISTER EVENTS PROJECT REGISTER MATRIX PROJECT UNCERTAINTY

Active

Event Id	Title	Type	Description	%	Dur	\$	Score
R1	MST Threat	Threat		Very Low (25%)	Very High (< 1...	Medium (< \$1...	21
O1	MST Opportunity	Opportunity		High (65%)	Very Low (< 4...	Medium (< \$1...	30

Publish

The Opportunity ranges one through nine (Ultra High to Ultra Low) and the blue color scale is also visible in the Mitigation page for opportunities.

Description	%	Dur	\$	Score	Risk Own...	Mitigation			
01 - MST Opportunity									
Probability: High (65%) Duration Impact: Very Low (< 40d) Cost Impact: Medium (< \$100K) Unmitigated: 30 + Add new value									
ID	Mitigation	%	Dur	\$	S...	Cost	Owner	Start	End
M1	MST MIT2	High (65%)	Very Low (< ...	Medium (< \$10...	30				

- The Project Uncertainty tab shows the attributes which the Markup & Review Cycle Score Card apply. These are the default values the scorecard will use when markups are being conducted.

PROJECT REGISTER EVENTS PROJECT REGISTER MATRIX PROJECT UNCERTAINTY				
Description	Min	Most Likely	Max	Color
Very Conservative	50%	100%	100%	
Conservative	75%	100%	105%	
Realistic	90%	100%	110%	
Aggressive	95%	100%	125%	
Very Aggressive	100%	100%	150%

CHAPTER 2 – USER ACCESS

Schedule Navigation

2.0.0.1 Main Menu

The Main menu navigation dynamically changes based on the selection of a project or an organization, your level of permissions, and the application you choose. One of the Main menu's functions is to let you connect and share data between all Eight applications involved in managing a project. This allows project management workflows to pass between job site, field office, and front office seamlessly in a consistent and standardized user interface. More information on the Main menu can be found [here](#).

Schedule can be accessed from All projects & organizations in the Main menu, which opens to the Schedule Project List page. If a schedule is linked to a project, from the project home page the Main menu click **Schedule** to open to the project workspace.

Open Schedule from Main Menu

1. Click the Main menu icon.

2. Select **All projects & organizations** from the Main menu.

3. Click on either a **project** or an **organization**.

4. Select Schedule

User Setup and Roles

Schedule Roles

Schedule Creator

The Schedule Creator role is typically a planner or scheduler at an organization. The user can create schedules and has full rights to those schedules.

Schedule creators can:

- Create and delete their own schedules
- Use Knowledge Library and Smart Planning to inherit schedules and subnets
- Use Productivity Rates

- Assign contributors to schedules for markup
- Manage markup process
- Manage Review and consolidation process
- Contribute to other schedules when assigned as a schedule contributor
- Import from the Knowledge Library and the Risk Register
- Import knowledge tags (codes and UDFs) from the Knowledge Library to Schedule Configuration

Project Member

The Project Member role can be wide range of organizational roles. The organization roles can be Supervisors, Foremen, SME's, External Subs, Customers, anyone that a project would like to contribute to the project. The Project Member role serves as a contributor to projects assigned to them by the administrator or project creator.

Administrator

The Administrator role in Schedule can also be considered the Super User. This role has full rights to everything in the customer instance of Schedule. The typical person in a company that would have these permissions is a senior planner who is a super user or a Planning/Scheduling leadership role.

In addition to the permissions described for the Schedule Creator and Contributor Role the Administrator can do the following:

- Manage the Knowledge Library (Schedules, Productivity Rates, Knowledge Tags, Risks)
- Create, delete, and modify any schedule
- Access to the system settings to add users to the instance

When a user in the InEight cloud platform has their permissions updated or a new role added with administrator permissions (Level 2 or Level 3), then the Administrator permissions are automatically assigned to the corresponding Schedule user.

Knowledge Base Administrator

The Knowledge Base Administrator role is primarily responsible for creating and updating Knowledge Library tags, schedules, deliverable rates, and Register Items.

User Creation

Create a New User

1. Click **Suite Administration**.

2. Select **User Management**.

3. Click the **Add Users**.

4. In the Details tab, enter the user contact information.

Add users

Schedule Contributor Setup

Schedule Contributors

Schedule Contributors are users assigned to the schedule. The contributors and their roles on a schedule are managed from the Schedule Configuration register.

Contributor Role Types

Project Contributor role types pertain to the user and are specific to each project. Users can be assigned different contributor roles for each project.

Markup

The Markup role grants access to markup and review cycles on a schedule. Selecting this on will allow this user to be assigned to activities for markup.

Short Interval Planner

This role grants access to the Short Interval Planning (SIP) section of InEight Schedule. Users in this role can be assigned to activities for field execution planning. For details on how to use the SIP Functionality, see chapter 6.

Scheduler

The Scheduler role has all access and privileges of the Markup and Field Execution Planner roles. Additionally, schedulers can adjust items in the Planning view, such as details in the Iris, logic in the Gantt chart, and resources.

Selecting Project Contributors

1. In Schedule Configuration, go to the **Contributors** tab.

- All Project Contributors are listed in the register
2. To add a new user, click **Add User**.

- The Add User Window opens
3. Schedule and Non-Schedule options are at the top of the window. Select **Schedule** to list all users currently registered in Schedule.
 4. Click on the user(s) to be added as project contributors.

Switching to Non-Schedule changes the window to a registration form which lets guest user to be added to the project. White toggle means it's turned *Off* and when it's dark, it's turned *On*.

5. Once selected, select ***On*** each role the new user should have.
6. Click **Add**.

This page intentionally left blank.

CHAPTER 3 – USER INTERFACE

Project List View

The Schedule home page is where you can see a list of projects and schedules, which includes a Gantt chart that illustrates project work and time periods. When a new project is created in InEight Platform, a workspace in Schedule is automatically added and linked to the project, which shows in the Project List view.

You can select multiple schedules on the Schedule home workspaces page, and then choose from the options to delete, copy or move. A locked schedule cannot be moved or deleted.

		Name	Schedule ID	Project
☐		▶ 104256		104256
☐		▶ 104256-D		104456
☐		▶ 104257		104257
☐		▼ 104690 JOC		104690
☒		2024-C Staffing	SCHED-85	
☒		Master Task Order Schedule	SCHED-43	

You can change the name of workspaces, folders, and IDs on the page by double-clicking the entry in the field.

		Name	Schedule ID	Project Suite	Start	Finish
☐		-DNU-		<u>-DNU- - DNU-</u>		
☐		Dev Solar		<u>104726 -</u>	23 Dec 2013	19 Feb 2014
☐		<u>12-9</u>	SCHED-486		09 Dec 2024	09 Dec 2024
☐		<u>KB Schedule_1</u>	SCHED-483		02 Dec 2024	31 Dec 2024

A Gantt chart is built in to the Schedule home page. The schedule Gantt chart illustrates horizontal lines representing work over a period in relation to the time planned for the work.

3.0.0.1 Schedule folders

You can create and manage multiple project folders inside of a workspace to better organize your schedules. Schedule project folders act as storage containers that help you group like schedules into manageable repositories.

You can create up to three levels of folders to organize your schedules into, conditional upon how you want to build out the hierarchy of your folder structures.

		Name ▾	Schedule ID ▾	Project Suite ▾	Start ▾	Finish ▾
☐		▼ Water Treatment Workspace			01 May 2024	30 Apr 2025
☐		▼ Water Treatment Facility Folder			01 May 2024	30 Apr 2025
☐		▼ West Coast Sub Folder			01 May 2024	30 Apr 2025
☐		<u>Central Coast Water Treatment...</u>	SCHED-96		01 May 2024	30 Apr 2025

When you import schedules, there is a new Folder drop-down to select which folder to place the schedule into.

You can move schedules into specified folders.

3.0.0.2 Schedule type

The schedule type shows a corresponding color scheme in the Gantt chart.

Schedule type ▼

Schedule Type	Definition
None	No schedule type selected.
Active Estimate	Represents the latest project agreed schedule based on the construction estimate.
Inactive Estimate	Represents the previous iterations of schedules based on the construction estimate.
Active Baseline	Represents the latest submitted/client approved construction baseline.
Inactive Baseline	Represents previous iterations of submitted/client approved construction baselines
Re-Baseline	Represents a copy of a schedule that has been re-baselined prior to submittal/client approval.
Active Update	Represents the current iteration of a schedule that is actively being

Schedule Type	Definition
	executed.
Inactive Update	Represents previous iterations of a schedule being executed.
Planned	Represents variations of schedules at conceptual phases of a project.
What If	Represents variations of schedules designed to test how different scenarios impact the overall time line. Used for schedule comparison.

You can change the Schedule type values to change the colors of the horizontal lines in the Gantt chart.

Locked Columns

The active baseline schedule type now automatically locks the schedule and converts it into a read-only state, which includes the Gantt grid, all Iris fields, and the Import icon. The locked read only state is applied to all views and impacts any functionality that involves the changing of data.

Active baselines are contractual schedule agreements between contractors and owners with infrequent changes. Some scenarios require active baselines to never change, which requires the active baseline to become locked.

The Risk register and Manage Review Cycle views are also in a locked and view only state, but data can still be exported from the Risk register.

Acme Corp | 22.10 Regression / Schedule / 10/12 Group test / Risk Register

This schedule is locked and is in a view only state.

Summary & Milestones

InEight Inc. | Release 25.9

Page 45 of 297

3.0.1 Show/Hide Logic, WBS

In the Plan view from the first level drop-down menu within a project, click the **ID** icon to show or hide WBS Codes.

Click on the **Logic** icon to show or hide logic relationships.

Annotations

In the Plan view from the first level drop-down menu in a project, click the **Annotations** drop-down menu.

From here, Annotations can be changed by clicking the various options, which will update the information displayed on the Gantt Chart.

The Benchmark Analysis options can also be used to change what level or WBS elements the phase windows appear.

The phase window indicates the time period that the benchmark falls within in the Knowledge Library project, conformed to the current project using the current project's start date and knowledge tags normalizers. For items that have the phase window showing, there is also a set of brackets indicating a range that the complete date of a summary WBS element is expected to fall within.

This is based on the % of tolerance defined in the project settings, the start date of the summary WBS in the current project, and the duration of the benchmark from the Knowledge Library.

3.0.2 Schedule Critique Overview

The **Schedule Critique** annotations and filters are available in the Plan view in Schedule. These functions aid schedulers in quickly identifying and isolating potential concerns with the current schedule logic.

Toggle Schedule Critique Annotations On / Off:

1. Start from the Plan view of a project and select the 1st level drop-down menu.

2. Under the Annotation section select **Schedule Critique**.

3. Once selected, the following icons will populate in the Gantt chart, representing potential logic and schedule concerns. These icons are detailed in the table below:

Icon	Description	Definition
	Missing Predecessor	The activity does not have any predecessor logic links and is not at the start of the project.
	Missing Successor	The activity does not have any successor logic links and is not at the end of the project.
	Lead or Lag	Predecessor and / or successor logic links contain lag.
	Insufficient Detail	The activity spans more than 10 % of the overall project duration.
	Incoming Bottleneck	The activity has 3 or more predecessor logic links.
	Logic Complexity	The activity has 3 or more predecessor logic links and 3 or more successor logic links.
	Hard Constraint	The activity uses a Must Start On / Must Finish On constraint.
	Negative Float	Total float is less than zero.

The color of each icon represents the criticality of a critique. Blue icons are typically not desired as they often impede the flow of a schedule. Orange icons are considered with more caution, as these have a higher potential for schedule delay. Red icons identify activities of serious concern.

3.0.2.3 Missing Predecessor or Successor

A **Missing Predecessor** or **Missing Successor** indicator appears when an activity does not have a predecessor or successor activity associated. Adding a predecessor or successor activity resolves this

critique.

Builder Menus

You can run advanced grouping, sorting, and query filters on multiple columns in several Schedule views, save as personal views and reuse in your assigned projects.

All menu builders can be saved and reused and are highlighted when there are existing saved views. Menu builder icons show when there are existing saved views. The enhanced search functions are available for all group by and sort builders.

3.0.2.4 Column set builder menu

The Column set builder menu lets you add and remove columns in the Plan, Markup, and Schedule Review views.

You can choose available columns in the Column set builder to create customized column page layouts.

3.0.2.5 Query builder menu

The Query builder menu lets you set column filters in the Plan, Markup, Schedule Review, and Cost Risk views.

You can choose available columns in the Query builder to create customized page layout query.

3.0.2.6 Sort builder menu

The Sort builder menu lets you sort columns in the Plan, Markup, Schedule Review, and Cost Risk views.

You can choose up to ten columns to sort in ascending and descending order.

3.0.2.7 Group by builder menu

The Group by builder menu lets you group columns in the Plan, Markup, Schedule Review views.

You can choose to group by one column or multiple columns.

3.0.2.8 View builder menu

The View builder menu lets you combine columns from the other builder menus and show in the Plan, Markup, Schedule Review views.

The View Builder lets you choose multiple columns from any of the builder menu columns. The chosen builder menus are highlighted on the toolbar.

For example, Interim Milestones does not show any scheduled activities, work packages, or milestones, in the Gantt chart.

When the Hide No Results toggle is set to *On*, Interim Milestones is removed from the Plan view.

CHAPTER 3 – KNOWLEDGE LIBRARY

Knowledge Base

Resources in the Knowledge Base

To access the Knowledge Base, click the **Knowledge Base** icon.

In the Knowledge Base, you can establish the base pool of resources for the organization. Schedule is built on top of augmented intelligence, or machine based learning. The Knowledge Base is used to enhance machine based learning and load with past schedule-related data that an organization would want to include in future schedules. Hence, this data that gets loaded should be as accurate as

possible. After set up, schedulers can pull these into projects for use with the resource management functionality and analytics.

CPM Schedule

CPM schedules in the Knowledge Base contain the same information as project schedules. CPM schedules are past or current schedules where relevant schedule data can be used in future schedules. For example: if you are working on a new schedule for bridgework, you can store past bridgework schedules in the knowledge library to use later for machine learning for new projects.

The Verified column on the far right is controlled by an administrator, and represents schedules that have been certified as schedules that contain accurate data. Schedules that show a green dot are verified, and red dots are unverified schedules.

Register

Events register

The Events register is where you store persistent risks that occur on projects. The Events register is useful for pulling stored risks into new schedules and use them for risk workshops. The following fields can be quickly edited from the register.

Tab	Function/Description
Title	Title of the event.
Type	This describes the type of register item, for example, Risk, Opportunity, or Action Item.
Description	Items descriptions can be edited at any time.
%	The Probability an event will occur in a risk simulation.
Dur	Impact range event would have on a simulation when it occurs.
\$	Impact range event would have on a simulation when it occurs

[illegible]

Additional Register Types can be defined by selecting the register type tab.

CHAPTER 4 – PROJECT CREATION

Import a Schedule

Importing a schedule

1. From the Schedule home page, click the **Import** icon.

2. Select a folder on your computer or external source, and then drag and drop the schedule to upload into the Schedule import dialog box.
3. Enter a schedule ID and schedule name. Select a project workspace and folder from the drop-down lists.

Schedule import

Export a Schedule

Exporting a schedule

1. In Plan view, click the **Export** icon at the top right of the page.

2. Select the export type from the Export Type drop-down options. Click **Export**.

The export file is downloaded to your browser's download folder.

Create a Schedule from Scratch

When you create a new schedule, there are two key sections to fill out: Details and Outline.

To start, click **Add New Schedule** in the Schedule register. This opens a window so that you can begin to fill out the schedule details.

Details

The Details section is the first stage for creating a new schedule.

Add a new schedule

Details

Context

Outline

Schedule ID

SCHED

Schedule Name

Project Workspace

22.10 Brian Group

Start Date

8 Dec 2022

NEXT

In the details section, complete the following information:

Field	Description
Schedule ID	Unique ID used for schedule identification.
Schedule Name	Official name of the schedule.
Project Workspace	Grouping of multiple schedules.
Start Date	Date the project starts.

Select **Next**.

Context

The second stage in creating a schedule is Context. Context lets you select existing project codes and UDFs to apply on a newly created schedule. These selections help with Knowledge Base suggestions throughout the Schedule application.

The screenshot shows a modal window titled "Add a new schedule" with a close button (X) in the top right corner. Below the title bar, there are three tabs: "Details", "Context" (which is selected and highlighted), and "Outline". A light gray instruction box with a blue vertical bar on the left contains the text: "Add some context to your schedule to help InEight Schedule make more informed suggestions." Below this, under the heading "Codes", there is a list of ten project codes, each preceded by a right-pointing arrow icon. At the bottom of the dialog, there are two buttons: "PREVIOUS" on the left and "NEXT" on the right.

Add a new schedule [X]

PREVIOUS

CREATE

You can select all or parts of the structure levels to use in the schedule being created. This is done by selecting a level from the Include Levels drop-down or by manually toggling work packages in the Include column.

Page 86 of 297

InEight Inc. | Release 25.9

Turning off a Superior work package will turn off its subordinates.

Also, the include Risk Register toggle lets you specify whether to include risks, and if so, the level of risk to include.

Any risks assigned to the Knowledge Library schedule are brought into the new schedule. Include Risk Register brings in the risk register items from the Knowledge Library Schedule into the new schedule.

The available risk levels are configured at the organization level.

Schedule Configuration Settings

Schedule settings lets you adjust the data date, switch schedule modes, switch how out of sequence progress is handled. These functions can be accessed via the secondary toolbar at the top of Plan view.

Schedule Configuration

Schedule Configuration contains the general information and settings for the current project.

Depending on the tab selected, information and settings pertaining to the tab heading are shown.

Tab	Function/Description
General	Schedule details, such as Project Name, Location, Estimate, Benchmark and work hours.
Contributors	Add, remove, and edit project contributors.
Crews	Set up standard crews for the project.
Knowledge Tags	Manage knowledge tags on the project.
Calendars	Define project calendars and non-workdays.
Resources	Manage project resources.
SIP Resources	Activities from the CPM Schedule show in the Short Interval Planning (SIP) view that are grouped, based on how the Plan view WBS is organized.
Project Suite	Connectivity to other InEight Project Suite Solutions (as needed).

General

On the General tab, you can configure the project details.

The screenshot shows the 'GENERAL' tab selected in a navigation bar. The main content area displays the following fields:

- Schedule ID**: SCHED-512
- Schedule Name**: Test Schedule
- Location**: Location not set
- Include Cost Estimation**: A toggle switch is currently turned off.
- Default Activity Percent Complete Type**: Duration

Contributors

On the Contributors tab, both external and internal users can be added to the project. Existing contributors can be removed or have their access level updated.

Project Suite

Print View

In Plan view, the Go To Print View icon lets you customize printable output to show and save to a PDF file by modifying the settings in the Page Setup and Gantt Setup tabs. After you configure the setup, you can then save the settings as a template to use again. Click the **Print templates** icon to access saved templates and create a new template.

Page Setup

On the Page Setup tab, you can choose from the options for the print page size, orientation, and scaling.

You can choose to include a header and footer to show on the print output page. Click in the location of the header or footer that you want to use, and then select the type of content to show from the list.

Click the **Add** icon to select the location in the header. Select the content type from the drop-down list to add, select the font size, and then click **Submit**. You can hover over the section to show the Edit icon. Click the **Edit** icon to make any necessary changes.

Gantt Setup

On the Gantt Setup tab, you can choose to show or hide the Gantt chart in the print output. When showing the Gantt chart, you can set the date range and timescale of the duration and include the active baseline and saved snapshots.

The Histogram toggle lets you hide or show the histogram. When showing the histogram, you have multiple configurations to choose from depending on the settings you choose.

4.0.0.1 Print Templates

After you configure the print settings on the Page setup and Gantt setup tabs, you can then save them to a template that you can easily access and reuse. After you configure the print settings, click Print templates > **Save current print settings**, and then enter a name for the template. The settings are saved, and the template is created which shows in the Saved print templates list.

Save to PDF

1. In Plan view, click the **Go to print view** icon at the top right of the page.
2. Do either of the following:
 - Go to Print templates > **Saved print templates**, and then select a template.
 - Configure settings on the Page Setup and Gantt Setup tabs.
3. Click **Save to PDF**.
4. In the Save As window, select a file name and choose a file location, and then click **Save**.

5. The Print to PDF windows will show printing status and a success message will show when the PDF printing is complete.

CHAPTER 5 – PACKAGES AND ACTIVITIES

Activity Productivity Rates

Productivity rates allow schedulers to establish a productivity factors for activities and thus scale durations accordingly.

These rates also aid in generating a bottom-up cost for the project.

To set the productivity factor, use the built-in application in the Iris' Smart Planning Section.

Set the productivity factor

1. Select an **activity**.

Activity	Start Date	End Date	Duration	Productivity Rate	Personnel	Cost	Other
Construction	05 Jul 21	12 Apr 23	463	...			
Early Sitework	05 Jul 21	29 Apr 22	215	...			
Foundations	16 Mar 22	09 Aug 22	105	...			1
Grade & Support Be...	16 Mar 22	12 Apr 22	20	...			24
Stub-in Utilities	13 Apr 22	03 May 22	15	...			24
Drainage	04 May 22	24 May 22	15	...			24
Pour & Cure	25 May 22	26 Jul 22	45	...			24
Enclosures	27 Jul 22	09 Aug 22	10	...			24

2. In Iris > **Smart Planning** section, select the **set productivity rate** option for the activity duration field.

- Now, you can view your project's bottom-up and top-down costs

Create Activities

There are two ways to conceptualize activity creation within InEight Schedule and depending on your intended outcome, there are benefits to each process:

- Knowledge subnet
- Create form scratch

Knowledge subnets

Schedule leverages the Knowledge Base to rapidly build a schedule based on historical projects or existing templates. This feature enables you to pull in similar activities from Knowledge Base projects and adjust them based on the parameters of the project being created.

Building a schedule

1. Select a planning package.
2. From the Iris > **Smart Planning**, under the first Schedule Suggestion, click **Import Knowledge Subnet**.

- The merge window opens, letting you customize your selection of planning packages and activities. For this example include all packages and activities in the subnet switched on
3. After the subnet selection is made, the option to bring in Knowledge Base subnet as *Native Import* or *Size to Fit* is available.

- **Native Import:** it will bring in the selected subnet with the original durations from the Knowledge Base
- **Size to Fit:** it will proportionally adjust the subnet to fit within the duration of the Superior planning package in the current schedule

4. Select either **Native Import** or **Size to Fit**.

5. When complete, click **Preview**.

- Schedule merges in the Knowledge Subnet into the project and presents it as a preview.

6. If the preview looks good for merge, select **Yes** to commit the import in Schedule.

Activities from Scratch

The second way to create activities is from scratch. This allows activities not yet in the Knowledge Library to be created on the project. Additionally, it provides schedulers total manual control when creating an activity.

Build Activities from Scratch

1. Click the **Actions** icon for the planning package which the subordinate activity falls under.

2. Select **Create Activity**.
 - A new activity will appear as a subordinate

3. Rename your activity by either selecting the description field in the Gantt View or by going to the Iris and adjusting the description there.

5.0.0.1 WBS summary activity type

In Schedule > **Plan**, you can create a WBS summary activity. Primavera XER imports support the WBS summary activity type and does not convert these summaries to Planning packages.

When you increase or decrease the duration of a portion of your WBS in your schedule, the WBS summary activity dynamically reacts to the modified duration changes.

You can load resources into WBS summary activities to help linearly spread units over a specific time frame. Different calendars can be assigned to the WBS summary activity for tracking.

5.0.0.2 Change Activity Type

You can select an Activity Type in the plan schedule and change it from one type to another via a drop-down menu, which lets change an activity type without having to leave the page.

Change Activity Type

1. From the Schedule Plan view select an (terminal level) **Activity**.
2. Click on **Show/Hide Iris**.

3. Click on **Activity type drop-down**, and select an activity type.

The screenshot displays the 'Activity Type' dropdown menu in the InEight software interface. The menu is open, showing a list of activity types. The current selection is 'Task dependent'. The dropdown is highlighted with a red border. Below the dropdown, there are several other sections: 'Logic', 'Knowledge Tags', 'Project Register', 'Delegation', and 'Resource Assignments', each with a downward arrow icon.

Assign Knowledge Tags

Knowledge Tags connect the data between the Knowledge Base, schedules, and activities. Assigning Knowledge Tags to planning packages and activities aid in associating schedules of similar scope, cost, duration, location, discipline etc. for InEight Schedule to generate suggestions and benchmarks.

The process of associating Knowledge Tags to activities is fundamentally the same for planning packages.

Assigning Knowledge Tags in the Iris

1. Select an activity. Open the Iris and go to the Knowledge Tags Section.
 - Knowledge Tags will appear in the Iris based on what is set up in the Knowledge Base & the Configuration Knowledge Tags Register.

The screenshot displays the InEight Schedule software interface. The main window shows a table of activities with columns: ID, Description, Actions, Register, Start Date, Finish Date, Remaining Duration, Resources, and Resource A. A specific activity, 'Ceiling installation and paint finish...', is highlighted in blue. To the right, a 'Logic' panel is open, showing a list of 'Knowledge Tags' under the 'Codes' tab. The tags are grouped into categories like 'As-Built Performance', 'AWP Structure', 'Brian Activity Code Test', 'CALENDAR', 'Kansas Animals', and 'Kansas Towns and Villages'. Each group has a 'SHOW' button. A red box highlights the 'Knowledge Tags' section in the Logic panel.

2. Click on the **arrow** to expand the Knowledge Tags available within each group.

Some tags have “Inherited” values. These are rolled down from a superior level (i.e. assigned at the project level, assigned at the planning package level)

3. Select a tag from the drop-down menu to assign it to the activity.

Assigning Logic

Logic is what links planning packages, activities, and milestones together throughout the schedule, for example when:

- an activity finishes, another starts
- two activities kick off at the same time
- multiple activities must be completed before another begins

Within Schedule, there are two ways to setup schedule logic: via the Gantt Chart or the Iris.

Using the Gantt Chart to Assign Logic

The Gantt Chart has built-in functionality allowing activity logic to be tied together directly in the visual. This is great for quickly adding or adjusting logic in the schedule.

When hovering over any activity bar in the Gantt chart, two dots will appear at the beginning and end of the activity:

Clicking and dragging either dot from what activity to another will create a logic tie.

- Dot at the beginning of an activity: the start logic of the activity
- Dot at the end of an activity: the end logic of the activity

Connecting dots between activities, define the type of logic being applied.

Function (Connect the Dots)	Logic (How to Connect)	
	Start-to-Start (SS)	Connect the start of one activity to the start of another activity
	Finish-to-Start (FS)	Connect the end of one activity to the start of another activity
	Finish-to-Finish (FF)	Connect the end of one activity to the end of another activity
	Start-to-Finish (SF)	Connect the start of one activity to the end of another activity

The first activity dot selected is treated as the predecessor to the second activity dot. Thus, the second activity will be a successor to the first activity.

Planning Mode

At the start of the project or phase, non-schedulers identify the key items to be planned for and create a rough timeline of the plan. InEight Schedule gives you the ability to do this in a way that easily carries forward into a full schedule.

Planning mode lets users freely move around planning items. In this mode, planning packages and milestones can be added, but not activities.

Create a new planning package

Planning packages brought in from the outline during project creation are automatically populated.

1. To create a new planning package from scratch, click the **Schedule** icon in the far left corner and select **Planning** Schedule mode.

2. Scroll down to select **Schedule and Save** at the bottom far right on the Schedule Settings window.

New planning packages are created as subordinates under the open or selected parent package.

ID - Description	Dates	Rem Dur	...	👤	Resources	Resource As	🟡	Float
Commercial Building	07 Sep 20 16 May 23	982	...	👤				
Multi-level	07 Sep 20 16 May 23	982	...	👤

Closeout	08 Mar 23 16 May 23	70	...	👤				0
WBS 0.1.6	07 Sep 20 16 May 23	702	...	👤				0

If the Actions icon is not available, you can bring it into view using the **Customize Gantt View** icon at top.

1. Click in the **Description** column to rename your new planning package.
2. Organize planning packages by clicking and dragging the rows.

Commercial Building	07 Sep 20 16 May 23	982	...	👤				
Multi-level	07 Sep 20 16 May 23	982	...	👤				
Preconstruction	07 Sep 20 25 Jul 21	322	...	👤				660
Procurement	22 Feb 21 14 Sep 21	205	...	👤			1	609
Construction	05 Jul 21 12 Apr 23	647	...	👤				34
Summary	05 Jul 21 16 May 23	681	...	👤				0
Closeout	07 Sep 20 16 May 23	702	...	👤				0
QC Signoffs	07 Sep 20 16 May 23	702	...	👤				0
QC Signoffs	07 Sep 20 16 May 23	702	...	👤				0

When dragging rows in the Gantt chart, either a white dot or a blue line shows where in the hierarchy the row is being moved. Or, a row is boxed in blue, signifying the planning package being dragged will become a subordinate to the boxed work package.

3. You can continue adjusting planning packages using the bars in the Gantt chart.

You can adjust a planning package’s duration in the Rem Dur column. This will adjust its duration while holding the current start date.

Bulk creation of planning packages

Add planning packages individually or in bulk with the Detail Out function.

- 1. Select the **Actions** icon on an existing planning package.
- 2. From the drop-down menu, select **Detail Out**.

- From here you can select how you want to add your new planning packages

The screenshot shows a dialog box titled 'Work or Scope' with a close button (X) in the top right corner. Below the title bar, there is a blue icon of a person with arrows pointing outwards. The main content area contains the following elements:

- A header section with 'Work or Scope' and two tabs: 'Activity' (selected) and 'Planning Package'.
- A 'Sequence' section with two radio buttons: 'In Succession' (selected) and 'Parallel'.
- A 'Duration' section with two radio buttons: 'Automatic' (selected) and 'Manual'.
- A 'Quantity' section with a text input field containing the value '3'.
- A 'Lag Duration' section with a text input field containing the value '0'.
- A summary line at the bottom: 'Schedule will create 3 Activities In Succession each with a duration of 2 days under WBS SCHED-67.1.1.'
- Two buttons at the bottom right: 'Cancel' and 'Build'.

Field	Description
Sequence	Sets the new planning packages to occur in succession or parallel.
Duration (Automatic)	Schedule will distribute the superior duration evenly across the subordinate planning packages.
Duration (Manual)	Manually set a custom base duration.
Quantity	Number of subordinate planning packages are being created.
Use Logic (On)	Logic is tied from one package to the next.
Use Logic (Off)	Logic is not assigned. Additionally, the option to set a scope gap is provided.

The values set here are for the default/initial creation of packages and can be changed as needed later .

3. Set the **quantity**.
4. Click **Build**.

At the bottom of the Detail Out window is a summary of what will be added to the schedule.

5. Your new WBS planning package is created, and you can rename your planning packages accordingly.

Advanced Work Packaging

The integration with Project Suite is built primarily for the Project Suite migration. For new users or non-connected workspaces, you can navigate to the Project List page, select a workspace and link a project. You can then select a project in Project Suite to connect and link a project schedule in Schedule.

When linked, the Project Suite field becomes populated with a selected project.

Acme Corp / Schedule							
+ × Move schedules Link project Unlink project							
		Project/Schedule name	Schedule ID	Project Suite	Start	Finish	C
☐		▶ 23.4 Group Test - Regression		123459 - Project 5	01 Jun 2015	21 Nov 2020	
☐		▶ 00001 BUG TEST			24 Apr 2023	24 Apr 2024	
☐		▶ 001. Baseline Regression		123456 - Project 2	23 Dec 2013	07 Dec 2034	
☐		▶ 1			30 Mar 2021	06 Oct 2028	
☐		▶ 22_2_Brian_Group_Testing			20 May 2022	23 Nov 2023	

When you go to AWP, you see Plan and Progress data in that schedule.

The availability of AWP data from Plan is determined by the Advanced work and scheduling features toggle in InEight cloud platform > project > Settings > General > **Global Options**. The toggle must be set to *ON* for projects that want to use the AWP feature in Schedule.

When a project schedule is identified as an Active Update Schedule Type, it becomes the Project Suite connected schedule.

An InEight icon shows next to the project schedule name to signify that the schedule is now linked with a project in Project Suite.

5.0.0.3 Unlink a Project Suite project

You can select **Unlink project** to disconnect a Project suite project from Schedule. All the AWP associations will be deleted, and any changes cannot be undone.

5.0.0.4 Schedule Configuration

Schedules that are housed under the *None* project workspace do not support a Project Suite project connection via the Project Suite tab in Schedule Configuration.

If a connection is required, you can move the schedule file to a new or existing workspace to enable this feature.

CHAPTER 6 – RESOURCE MANAGEMENT

Project Resources

The Resource Management function provides schedulers with the ability to account for and report on the project resources (for example, labor, materials, or equipment) that are needed to plan the scheduled work.

From a shared organization resource pool, schedulers can assign the required resources to activities. With the resource utilization data, InEight Schedule can assess cost and time impacts in a time-phased manner.

Resource Assignments

Resources are assigned to activities (activity level) but can also be set via work packages (summary level) in the schedule.

Assign Resources at the Activity Level

From Plan view, access the resource assignments of the assigned by using the options below:

- You can open an Activity’s details in the Iris, expanding the Resource Assignments section, and selecting **Modify**.

Modify

- You can customize the Gantt Chart view to include the Resources Column and selecting the **Resources** icon directly in the Gantt Chart.

ID - Description	Actions	Register	Start Date	Finish Date	Remaining Dura...	Resources	Resource Assignments
ABC Building Project Baseline	...	4	21 Jun 2021	14 Jul 2022	268		
ABC Building	...	4	21 Jun 2021	14 Jul 2022	268		
Summary & Milestones	...	4	21 Jun 2021	14 Jul 2022	268		
Pre-Construction	...	4	21 Jun 2021	24 Nov 2021	110		
Construction	...	4	4 Aug 2021	11 Jul 2022	234		
Mobilization	...	1 4	4 Aug 2021	16 Aug 2021	9		
Temp Trailer Install	...	5	11 Aug 2021	11 Aug 2021	1		SCE_COST, SCE-CRE
Temporary Electric Install	...	5	5 Aug 2021	11 Aug 2021	5		SCE_COST, SCE-CRE
Existing Conditions Document...	...	5	4 Aug 2021	6 Aug 2021	3		SCE_COST, SCE-CRE
Install Temporary Barricades	...	5	9 Aug 2021	10 Aug 2021	2		SCE_COST, SCE-CRE

Dig Alert	...	5	4 Aug 2021	6 Aug 2021	3		SCE_COST, SCE-CRE

- When either of these options have been selected, the resource assignment window appears:

- In the resource window, under Available Resources, select the resource.

All available resources can be quickly found using the search function in the resource assignment window. If a resource cannot be found or a project-specific resource is to be

made, see “Creating Project Resources via Resource Assignment” on for more information.

3. Once selected, click the **right arrow** to add the resource to the activity’s Resource register.

Double clicking a resource will also add it to the activity’s Resource register.

4. Once added, details for each resource can be modified for the activity. Fields that can be adjusted at this level include Curve, Units/d, Cost/Unit, FTE/Qty, and Plan.

Q

ID ↑	Name	Category	Col...	Curve	Unit...	Unit	Cost...	FTE/...	Plan	Rem	Act	
332	Crane	Labor	●	Lin... ▶	8	Hours	0	1	328	328	0	⊗

Steel		Labor	●	Lin... ▶	8	Hours	0	1	328	328	0	⊗

If a resource is not available in the Project's resource register, a new resource can be created directly from the Resource Assignment window. See "Creating Project Resources via Resource Assignment" topic.

Fill Down

The Fill Down function lets you fill down a calendar, code or resource from the summary level. You select the items to fill down, the system fills down the selections and processes the items to all child level elements.

Fill Down from the summary level

- 1. Identify the summary level planning package to assign resources to, and select the **Actions** icon.

Construction		11 Nov 19 30 Dec 21	557	...	👤	
Early Sitework		11 Nov 19 09 Nov 20	259	...	👤	
Entry & Access Roads		11 Nov 19 22 Jan 20	53	...	👤	

- 2. In the Actions menu, select **Fill Down**.

- The Fill down window appears

- All assignments made from this window flow down to all subordinate activities.

All available resources can be quickly found using the search function in the resource assignment window. If a resource cannot be found or a project specific resource is to be made, see the “Creating Project Resources via Resource Assignment” section for more information.

Resources can still be further edited at the activity level even when set up from the summary level. Plan values are not editable when applying a resource at the summary level but can be adjusted at the activity level.

Resource Histogram

After a schedule has been loaded with resources, Schedule can generate a resource histogram.

Generate a Resource Histogram

1. In the Schedule's Planning View, select **View Options**.
 - A drop-down menu appears where you can switch the Resource Histogram on or off.
2. Switch the histogram from off to *ON*.

A histogram shows below the Gantt Chart. The resource histogram plots resource utilization over time depending on the following:

- **Resource Settings Configuration Options:** When the resource histogram is switched on, more settings become available for configuration.

Setting	Function
Resource Histogram	You can switch the Resource Histogram view on or off.
Comparison Mode	Compares Current, Active Baseline, and Snapshots in the Resource Histogram.
Status	Filters histogram to show Planned, Actual

Setting	Function
	resource quantities, Remaining or Remaining Late.
Display	Adjusts the Y-axis of the histogram to show Units, FTE, or Cost.
Unit	The resource's unit of measure.
S-Curve	Switches on or off the S-Curve on the resource histogram.

- **The activity or summary level selected in the Gantt Chart:** The resource histogram plots out data based on the activity or planning package selected in the schedule
 - *The zoom level selection:* The zoom level for the Gantt chart controls both the schedule and resource histogram X-axis units of time that is days, weeks, months, quarters, years or decades.

3. Set the Resource Setting Configuration Status to **Planned & Remaining**.

This populates the Resource Histogram with all planned and remaining resources for the activity or planning package selected.

4. Change the Resource Setting Configuration Display from Units to **Cost**.

- FTE stands for Full Time Equivalent, and is the count of people per time period.
- Burn rate is the percent planned per period of time.

- This adjusts the Y-axis values from resource quantities to dollars

5. Switch on the **S-Curve**. This overlays the S-Curve on the Resource Histogram.

S-Curves reflect cumulative data. As the values increase over time, this reflects the accumulation of resource units/FTE/cost, depending on settings, over time.

Filtering by Resource

Filtering by resource only applies if the stacked resource histogram is turned to *On*. In the filter functionality, the Gantt chart & resource histogram can be filtered to see planning packages and activities assigned specific resources. When the resource histogram is switched on, it can be used as an interactive filter as well. Selecting a Resource Name listed in the histogram or any of the resource bars will filter down the Gantt Chart and Resource Histogram to show only data pertaining to the information selected.

In the image below, the Resource Histogram is filtering based on the selected resource: *Concrete Finisher*.

Additionally, to modify or disable the resource filtering, users may click the filter icon to make adjustments to the filter parameters.

Histogram Comparison Mode

In View Options, you can view the histogram in comparison mode, when enabled.

When the Comparison mode toggle is set to On, the baselines and snapshots that exist in the Baseline/Snapshot Management show as a graph with the current baseline. The histogram compares resources rolled up to the category type and shows you resources as they trend.

Each line in the graph represents a baseline, snapshot, and the current estimate.

The histogram graph can now also be shown in units and burn rate.

You can also view the histogram with an S-Curve that shows you a cumulative trend line for each baseline, snapshot and current.

Export Assignments

Schedule export functionality includes the ability to export resource assignments. Select the **Export** icon, then select the **Resource Spread** export type from the drop-down menu.

Project Specific Resources: Project Configuration Setup

Resources in a Project are either global resources or project specific resources. Global resources automatically populate a project's resource register from the Knowledge Base. If a resource is not available from the established global resources, project specific resources can be set up.

Project specific resources are useful when the resource utilized is unique to that project and not applicable across the organization.

To establish project specific resources:

1. Select Schedule Configuration from the project drop-down menu.

2. Select the **Resources** tab in the Knowledge Base.

This brings you to the project-level resource register

The Project level resource register functions the same as the Knowledge Base. See Setting up Resources for information about how to add resources and use the Import/Export functionality in the Resources register

 A screenshot of the Project level resource register table. The table is displayed under the 'RESOURCES' tab. It has a header row with columns: ID, Name, Category, Color, UoM, Default Units/d, Cost/Unit, Assignments, and a final column with circular icons. Below the header, there are five rows of data representing different resource types: FDN (Foundations), CNC (Concrete), GRD (Grading), STL (Steel), and INT (Interiors). Each row includes specific values for the columns, such as 'Labor' for Category and 'Hours' for UoM. The 'Assignments' column shows numerical values like 15, 22, 7, 7, and 15. The final column contains circular icons with arrows, indicating import/export functionality.

ID	Name	Category	Color	UoM	Default Units/d	Cost/Unit	Assignments	
FDN	Foundations	Labor	Red	Hours	8.00	100.00	15	ⓘ
CNC	Concrete	Labor	Green	Hours	8.00	200.00	22	ⓘ
GRD	Grading	Labor	Blue	Hours	8.00	150.00	7	ⓘ
STL	Steel	Labor	Red	Hours	8.00	350.00	7	ⓘ
INT	Interiors	Labor	Yellow	Hours	8.00	225.00	15	ⓘ

Schedule possesses the concept of global and project specific resources. When you create a schedule, it does not populate the resources in the Schedule Configuration window, but you can import resources from the Knowledge Base to use in your schedule.

Project specific resources can also be added from the resource assignment window in the planning view. See the Resource Assignment for more information.

6.0.0.1 Create a project-specific resource via the Resource Assignment window

Project Specific Resources can also be created from the Resource Assignment window in the Planning view.

Create a Project Specific Resource via the Resource Assignment Window

- 1. Without having any resources selected, click the plus **+** icon.

- The Add Resource opens to add a project specific resource

Add Resource

Name:

Description:

Category:

Unit:

Default Units/d:

Cost/Unit:

ADD

2. Fill out the project resource information and then click **Add**.

Resource histogram view

The Resource histogram shows the assigned resources for the project in the histogram window. Assigned resources can be viewed based on Planned, Remaining, Actual, and Remaining Late statuses. Use the following instructions to enable the Resource histogram view.

Enable the Resource Histogram View

1. In the toolbar, click the **View options** icon.

2. Switch the Resource Histogram toggle to enable the Resource histogram.

The view options menu now shows more features in the gray box area. Resources show in the bottom left of the screen. To the right, the histogram window shows.

- To view a specific date range for resources, on the right side of the screen, select the **Zoom level** icon.

The Zoom level is set to Month in the following images.

The histogram now shows resources allocated based on the month. By default, only the Planned status is selected.

Use the following instructions to add statuses to the histogram.

Add statuses to the Resource histogram

1. Select the **View options** icon, and then select the **Status** drop-down menu.
The Planned status is selected by default.
2. Select another status to show on the histogram that has not been selected previously.

The additional statuses show the resource bar in different colors. You can hover over the bar to view the data or you can review the resource data in the left column. The image below shows that the Planned and Remaining Late statuses currently occupy the histogram.

In the columns on the left of the screen, the status selected brings in the units associated to it. In this case, the remaining late units are brought in because the Remaining late status is selected. You can see those units spread incrementally across the project.

The data date is also shown on the histogram. You can add the data date and the finish date of the project for reference so that you know the boundaries of your project.

S-curve

In addition to the incremental curve, you also have a cumulative curve. This is also known as the S-curve. If you toggle the S-curve *On*, you can see two S-curves are planned on the histogram.

Use the following step by step to enable the S-curve in the Resource histogram.

Enable the S-curve

1. In the toolbar, click the **View options** icon.
2. Select the **Status** drop-down menu, and then select **Remaining** and **Remaining Late**.
3. Switch the S-curve toggle to enable the S-curve.

Two S-curves show on the histogram. At the conceptual phase of a project, you are shown these early and late dates. The space between those curves is the float on the project.

Actual status enabled with S-curve

With the Actual status enabled with the S-curve lines, you can see that the Actual line ends where the Remaining Late and Remaining lines start. This is your job to date running total for the project. For example, you had certain man-hours earned to date and the remaining hours to earn start from what you have earned to date. You started from the Actuals line in blue and then you go forward from there. The Actual line end where remaining units begin. The Remaining and Remaining late lines starts where actuals for the project end.

Over-allocation

Over-allocation shows you where you are over allocated based on your resource limits. For example, where you planned for more resources needed to complete the work than you currently plan to have on site. This means in the month of August and September, the bars above the line represent a need for more resources. To fix this over-allocation, you can move activities around to flatten that peak, add more resources, or extend the duration of your activities.

The line across the histogram represents the activity calendars on which these resources are assigned. Weekends, holidays, and exceptions make the line drop because you are working fewer days in that given period. During those periods, you have fewer days to complete the work.

Use the following step by step to enable Over-allocation in the Resource Histogram.

Enable the Over-allocation

1. In the toolbar, click the **View options** icon.
2. With Resource Histogram enabled, switch the Over-allocation toggle to enable Over-allocation.

Stacked histogram

The Stacked Histogram shows the different resources in the histogram using different colors. Hover over the different colored tool tips to show which resource that color represents. The tool tip also gives you data for the specific resource and period.

The Stacked Histogram contains advanced filtering capabilities, letting you click on a specific colored bars in a specific time period. Schedule then builds a filter to show that resource for that time period in the Gantt chart.

Use the following step by step to enable the Stacked Histogram.

Enable the Stacked Histogram

1. In the toolbar, click the **View options** icon.
2. With Resource Histogram enabled, switch the **Stacked Histogram** toggle on.

Stacked Histograms are shown on the histogram.

- 3. Hover over the different colored bars to show the tool tip information.

Changing the stacked histogram colors

Similar to the color column in the SIP resources, the Stacked Histogram colors are controlled at a project level in the Project Configuration.

Use the following step by step to edit the column colors for the stacked histogram.

Edit Stacked Histogram Colors

1. Select the navigation drop-down menu.
2. Select **Schedule Configuration**.

3. Select the **Resources** tab.

Resources that have been added to the Resources tab have a column labeled Color.

- 4. Select the color cell in the row of the resource you want to edit. Then choose a different color for that resource.

GeneralContributorsKnowledge TagsCalendarsResourcesSIP ResourcesProject Suite

Burn Rate

When Burn Rate is enabled, it shows as a percentage on the x-axis. The Burn rate is the percent of total man-hours in a period. The equation is the following:

Month total for a resource ÷ project total for resource(s) = Burn rate percentage

Use the following step by step to enable the Burn rate on the Resource Histogram.

Enable the Burn rate

- 1. In the toolbar, click the **View options** icon.
- 2. Select the **Display** drop-down menu.
- 3. Select **Burn rate**.

The histogram shows Burn rate data.

Excel Export

The Excel export feature lets you use the exported project file for reporting since it is a flat data source. When you export from Schedule, the data from the entire project is exported including the following tabs:

- WBS
- Activity
- Logic
- Codes
- Udfs
- Resource Assignments

Each tab provides information that can be built upon each other. This lets you pivot on different data to create slicers for your reports. The Excel export also lets you make bulk edits to a schedule. You can

build an entire schedule in Excel and then import it back into Schedule. This includes logic, resource assignments, and the WBS. Each tab contains the following fields:

- Required
- Optional
- Validated
- Ignored

When considering what to import back into a Schedule project, you have the option to delete some tabs and import in only the specific tabs that were changed.

If there are no changes to the file imported back into a Schedule project, the import shows no changes have been made.

Use the following step by step to export a Schedule project.

Export from Histogram

1. Select the **Export** button on the right of the screen.
 - The Resources Building dialog box is shown

2. Select the **Export Type** drop-down menu.
3. Select **Excel Export**, and then select **Export**
 - An Excel project file opens

33						
34						

Use the following step by step to import an Excel file into a Schedule project.

Import into the Schedule

1. From Schedule, select the **Import** button on the right of the screen.
2. Browse to the file you want to import back into Schedule.
3. Select **Import**.

An error message can be shown during the Import process. This error message can show where an error occurred in the Excel template and where the fix needs to be made. The import still brings in the data that is correct, but it skips over the data that generated the error. The error is then logged in Schedule.

This page intentionally left blank.

CHAPTER 7 – SCHEDULING

7.0.1 Scheduling Overview

Scheduling

Setting Schedule Progress Attributes

1. Click the **Scheduling** icon in the Smart Planning tab.

2. Populate the following information on the General tab:
 - **Project Start** - This is the project start date.
 - **Data Date** - Sets the “current” or as-of date that you are looking at in the system.
 - **Project Finish** - This is the project finish date.
 - **Auto CPM** - This should generally be set to *On*, so logic is automatically applied to

items in your schedule.

The screenshot shows a 'Schedule Settings' dialog box with three tabs: GENERAL, PROGRESS, and FLOAT. The GENERAL tab is selected. It contains three date pickers: 'Project Start' (13 Sep 2021), 'Data Date' (13 Dec 2021 7:00 AM), and 'Project Finish' (10 Feb 2026). Below these is a toggle for 'Auto CPM' which is currently turned off, accompanied by an information icon. At the bottom right are 'Cancel' and 'Schedule and Save' buttons.

GENERAL	PROGRESS	FLOAT
Project Start 13 Sep 2021 Data Date 13 Dec 2021 7:00 AM Project Finish 10 Feb 2026 Auto CPM ⓘ ☐		

Cancel Schedule and Save

3. Populate the following information on the Progress tab:

- **Schedule Mode** - The Schedule Mode can either be **Scheduling** or **Planning**. Activities without predecessor logic or constraints will be scheduled against the Data Date.
- **Out of Sequence Progress** - This should remain on retained logic, retains planned dependencies between unworked portions of activities.
- **Auto Progress** - If set to *On*, Schedule assumes that work is proceeding as planned. Activities will be progressed to where they were planned to be on the data date. If set to *Off*, you manually progress activities. This should be done prior to advancing the data date of the project.

- **Recalculate Actual Units When Duration % Complete Changes** - Actual units on assigned resources update per the duration % complete. For example, if a 10-day activity is progressed to 50% duration % complete then a resource assigned to that activity with 100 units planned would update to 50 actual units. Off - Duration % complete and Actual units are unlinked.
- **Relationship Lag Mode** -Dictates which calendar between a predecessor and its successor the lag of a relationship is used when establishing Finish and Start dates in CPM.

The screenshot shows the 'Schedule Settings' dialog box with the 'PROGRESS' tab selected. The dialog has three tabs: 'GENERAL', 'PROGRESS', and 'FLOAT'. The 'PROGRESS' tab contains the following settings:

- Schedule Mode**: A dropdown menu set to 'Scheduling'.
- Out of Sequence Progress**: A dropdown menu set to 'Retained Logic'.
- Auto Progress**: A toggle switch that is currently turned off.
- Recalculate Actual Units When Duration % Complete Changes**: A toggle switch that is currently turned off.
- Relationship Lag Mode**: A dropdown menu set to 'Predecessor'.

At the bottom right of the dialog are two buttons: 'Cancel' and 'Schedule and Save'.

4. Populate the following information on the Float tab:

- **Identify Critical Activities by** - Identify critical activities by either the **Total Float** or the **Longest Path**. If the Total Float value is less than or equal to the defined number of hours (default 0) then it is an indication that an activity is critical. The Longest Path is the path

through a project network from start to finish where the Total Duration is longer than any other path.

- **Total Float** - Set the Total float to less than or equal to **8 hours**. The Total Float represents the amount of time a task can be delayed without affecting the completion date of the project.
- **Manually Configure Settings** - Set the Manually Configure Settings to **On**.
- **Define Critical Activities Using** - You can define critical activities using either **Total Float** or **Free Float**. Free Float represents the amount of time a task can be delayed without affecting the start date of its subsequent tasks.
- **Number of Paths to Calculate** - You can calculate up to 10 sub-critical paths. This helps you to better envision the activities that have a potential of being delayed, which gives you additional time and consideration to push out the schedule. You can choose to execute certain actions such as defining the critical activities by using either free float or total float, select an activity to stop showing multiple float paths, and determine the number of float paths to calculate.

5. Clicking **Schedule** updates the data date and logic based on the settings selected.

Critical Path - Driving Indicator

The driving indicator (steering wheel) appears in the Logic section of the IRIS panel. The driving indicator indicates that a predecessor or successor is on the critical path.

Progressing

To begin Progressing, select the activity that you want to progress, and reference the smart planning panel.

Duration percent complete uses the duration that was originally loaded onto the activity. For example, if the duration was set to ten days for completion and only five days have been completed, the system automatically sets duration to 50 percent complete.

Units percent complete uses the resource budgeted units. Schedule uses any units that have been budgeted to that activity to automatically calculate the percent complete. For example, if there are 100 man hours someone needs to work and they only worked 50 hours, the system would calculate it to 50% complete.

You can also update the Units Percent Complete at the activity level. When the Recalculate Actual Units When Duration % Complete Changes toggle in Schedule Settings is set to Off, you can manually edit the Unit Percent Complete field in Smart Planning.

Updating the Units Percent Complete at the activity level in Smart Planning also updates the actual and remaining for the associated resource assignments.

Physical percent complete uses the Phys % Complete column as a text field to type in the percent complete. This only applies to an activity that has started and is not completed. Physical percent complete interacts with earned value management. For example, if you have 20% physical complete and 5% duration complete, there are three ways of updating this. You can change the remaining duration, you can change the finish date, or you can change the duration percent complete. The system automatically adjusts the math.

Adding % Complete columns to the Gantt Chart

1. From the Gantt Chart, select the **Select View Template** icon.

2. In the Available Columns column, scroll to the Duration section. Then select the following columns for percent complete:
 - % Complete
 - % Complete Type
 - Dur % Complete
 - Phys % Complete
 - Unit % Complete
3. Use the arrows to move the columns to the Selected Columns column.

4. Select **Set View** to add the percent complete columns to the Gantt chart.

7.0.2 Snapshot And Schedule Settings

7.0.2.1 Set Snapshot

Setting the snapshot lets you compare any future changes that we make to the plan to our current plan.

It is important to set the snapshot before applying any progress to the schedule. This lets you compare the current progress against the snapshot plan.

Before setting the snapshot, the SN1 Start and SN1 End dates columns show no values.

ID - Description	Rem Dur	Progress	Start Date	Finish Date	Baseline Start	Baseline End	New
North Tower Commercial Building			01 Aug 19	31 Mar 22			  
Multi-level			01 Aug 19	31 Mar 22

Permit Completion Milestone			08 May 20	07 May 20	08 May 20	08 May 20	

If the snapshot has not been set when a Markup Cycle is started, Schedule requests confirmation to establish the snapshot so any markups or changes to the schedule can be compared before and after review.

Gantt bars of up to 2 snapshots can be visualized against the current schedule Gantt bars for comparison. Gantt grid columns show variances between the current schedule and the snapshot columns.

7.0.2.2 Scheduling

Schedule uses CPM for scheduling a set of activities. This method calculates the activity dates based on the durations and logic.

To schedule the project or review schedule options, click **Schedule**.

Schedule

7.0.2.3 Data Date

Data Date

20 Nov 2020

Set the Data Date to the day and hour you want to update the schedule to. The Data Date is used as the starting point to calculate the dates of all remaining activities. The Data Date is represented by the blue vertical line on the Gantt chart

7.0.2.4 Schedule Mode (Planning vs. Scheduling Mode)

The Schedule Mode determines how activities without predecessor logic or constraints will respond to the updates being made to the schedule.

- In **Planning Mode**: Activities without predecessor logic or constraints do not snap back to the Data Date. This allows activities without predecessors to be scheduled throughout the project's timeline.
- In **Scheduling Mode**: Activities without predecessor logic or constraints are scheduled against the Data Date.

7.0.2.5 Auto CPM

Selecting the Auto CPM option *On* updates activity duration and sequence as actual progress is entered into Schedule. Switching this to *Off* prevents the schedule from automatically adjusting when activity is updated, and it must be adjusted manually. This is particularly useful if schedulers plan to update multiple activities in bulk, and then determine the CPM.

Out of Sequence Progress

- **Retained Logic:** Relationships are maintained between the predecessor and successor for unworked portions of activities and continued after the predecessor has finished.
- **Progress Override:** Relationships between the predecessor and successor are disregarded, and unworked portions of activities continue before the predecessor has finished.
- **Actual Dates:** When actual dates in the future occur, the remaining duration of in-progress activities are calculated after the conclusion of the future activity.

7.0.2.6 Auto Progress

Auto Progress determines if activities automatically start and progress when the Data Date has passed.

- If Auto Progress is *On*, activities that occur before the Data Date will automatically start progressing.
- If Auto Progress is *Off*, activities that occur before the Data Date will be pushed forward to the current Data Date without having started.

7.0.3 Baseline/Snapshot

Snapshots take all information from your current project file and saves it to the Snapshot Management menu. After a snapshot is saved, you can set another snapshot, overwrite a snapshot, delete a snapshot, save as a new schedule, or promote to a schedule.

There are only two snapshot slots available per project. The information on the snapshot cannot be edited after it has been created. Only the name of the snapshot can be changed.

The active baseline and any available snapshots are in a grid format, in addition to a color-coded metric table. This lets you see a comparison between the current schedule, active baseline, and available snapshots.

1 active user

Number of Activities	9	9	9	9
Start Date	30 Jun 2022	20 May 2022	30 Jun 2022	30 Jun 2022
Finish Date	13 Dec 2022	2 Nov 2022	13 Dec 2022	13 Dec 2022
Remaining Duration	167 days	167 days	167 days	167 days
Average Float	35 days	10 days	35 days	35 days
Labor Resource Units	0	0	0	0
Total Cost	\$0	\$0	\$0	\$0
Critical Activities	4	4	4	4
Activities Completed	1	0	1	1
Activities in progress	1	0	1	1
Activities not started	7	9	7	7
Constraints	3	3	3	3

You can also assign other schedules that are part of the same project workspace as the current schedule to your active baseline and snapshots using the assign schedule function.

Select *Revert to default* to return to the previously assigned defaulted schedule.

Active baseline

The images below show what the Gantt chart illustrates when the active baseline is turned off and then on.

7.0.3.7 Create a snapshot

The following step-by-step walks you through how to create a snapshot.

You can only create snapshots from the Plan view.

Create a snapshot

1. From the Plan view, select the **Snapshot** button in the toolbar. The Snapshot Management menu opens.

2. In the Snapshot Management menu, select **Set snapshot**. The snapshot automatically saves as Snapshot – [date].
3. Click the **Edit** icon next to the snapshot name to change the dialog box into an editable text box. You can now rename the snapshot to a name of your preference.

7.0.3.8 Overwrite a snapshot

You can overwrite a previous snapshot if the information saved in the first snapshot does not have the most up-to-date information.

If another user saved the snapshot you want to overwrite, confirm with that user that the information in the snapshot to be overwritten is no longer needed.

The following step-by-step walks you through how to overwrite an existing snapshot.

Overwrite a snapshot

1. From the snapshot Management menu, find the snapshot you want to overwrite.
2. Select **Overwrite snapshot**.

The old snapshot is overwritten and a new snapshot is saved in that snapshot slot.

Analysis View template

The Analysis View template works alongside the snapshots. This view lets you bring in new columns from SN1 Actual Finish to the additional variance columns. These columns are used in snapshots to compare information between snapshots and the current project. This template includes anything with a snapshot or a variance.

The following step-by-step walks you through how to select the Analysis View template.

Analysis View template

1. In the toolbar, select the **Select View Template** icon.

2. In the Current Template field, select the blue icon on the right. A drop-down menu opens.

3. Under Global Templates, select **Analysis View**.

Columns that are available for viewing snapshot changes are available in this template. You can also add any available columns to the template as needed.

4. Use the arrows to move the columns over to the Selected Columns column as needed.
5. After the Analysis View template has been edited, select **Set View** to add the columns to the Gantt chart.

7.0.3.9 View snapshots in the Gantt Chart

After the snapshot has been created, your Gantt chart is updated with bars for the information that relates to the current schedule status and the snapshot status. The darker bars can be moved to

change the schedule on the Gantt Chart. The lighter bars represent the snapshot. The bars are blue when the schedule is not critical and red if they are critical.

The following step-by-step walks you through how to view existing snapshots on the Gantt Chart.

View snapshots

1. In the toolbar, select the **View options** icon.
2. Under the Snapshots section, select the slider for the snapshot you prefer to see in the Gantt chart. A drop-down menu opens.

Two bars now show for items in the Gantt chart. You can move around the darker blue or darker red bars. The lighter bars represent the information saved in the snapshot and cannot be moved.

7.0.3.10 Variance Columns

Each variance column compares the snapshot to the current project.

The columns show a badge depending on how the information changed. If there is a net zero change, then no badge appears. For example, the variance columns might show a green badge number if there is a decrease in duration between the snapshot and the current project. The badge numbers could also show in red if the duration increased between the snapshot and the current project. If there is no change between the snapshot and project, the number shows as 0.

7.0.4 Promote to Schedule

When you choose to promote a snapshot to schedule or to save a snapshot as a new schedule, the snapshot selected is then saved to the project list.

Promote to Schedule saves a snapshot to the project list. If you select **Save as a new schedule**, this option saves the current project as a copy onto the project list view as a new schedule.

The following step-by-step walks you through how to save a snapshot to the project list.

Promote to Schedule

1. In the Snapshot Management menu, click the **Promote to Schedule** button.

2. If preferred, enter a new name for the snapshot in the New snapshot schedule name field.
3. Click **Create new schedule**. The new schedule has been saved to the project list.
4. Click **View in Project List** to view the new schedule.

7.0.4.11 Project list view

You can organize your schedules in project folders. Project folders can be created in the project list to better organize schedules into a project hierarchy. You can list as many schedules as needed under

each project workspace.

The projects can be organized alphabetically using the column header sort function. Use the options from the Action menu on folders to perform the following:

- Edit Project Workspace Name
- Move schedules
- Delete

Use the options from the Action menu on individual schedules to perform the following:

- Edit Schedule Name
- Edit Schedule ID
- Move schedule
- Copy
- Delete

You can also edit the Schedule Type for each schedule. By default, the Schedule Type field is set to **Estimate**.

If you do not organize your schedules into specific project folders, then the schedule is placed under the None folder by default.

If you import a project file into Schedule, you must include the Schedule ID, Schedule Name, and a Project Workspace.

Integrations

The Integrations and Update buttons show in the Plan view toolbar. Click **Integrations** to see the InEight products currently integrated with Schedule, which currently only includes InEight Estimate. The green circle icon on the button indicates there is an active integration in Schedule. The Update button is used to pull the data changes made to the InEight product (Estimate) in to Schedule.

After you click **Update**, changes cannot be made to the schedule until the update is completed.

To integrate Estimate job data with Schedule workspaces, see Integrated Solutions [InEight Integration Estimate-Schedule](#) for more information.

CHAPTER 8 – SCHEDULE MARKUP PROCESS

Markup Process Overview

Assigning Markup

Markup is assigned in the plan project view from the first level drop-down menu in a project. Select a project WBS summary level, then expand the delegation panel and click the **Modify Assignments** icon, where users can be assigned at various levels within the schedule to provide markup.

Click the **blue ellipse** icon and select users to assign to WBS elements.

Initiating the Review Cycle

Once contributors are assigned, the review cycle can be initiated by clicking on the Manage Review Cycle link in the top right of the delegation panel or go to the project settings view from the 1st level drop-down menu within a project and select Manage Review Cycle.

Assigned contributors and a review message can be validated here. After the Start Review Cycle button is clicked, an invitation email is sent to contributors.

Start Review Cycle

EXPORT FORMAT

Marking up the Schedule

After the review cycle is in process, assigned contributors should log into the project, confirm they are in the Markup project view from the first level drop-down menu in a project, and provide feedback to sections of the schedule assigned to them.

Reviewing Markup

After Markup is complete, group consensus and individual responses can be assessed from the Review project view from the first level drop-down menu in a project. Consensus is indicated by the signal bars in the tabular WBS view, and individual responses can be viewed by selecting a WBS element and looking in the Duration Uncertainty slide-out panel to the left.

After a review is complete, the cycle can be ended by returning to the Manage Review Cycle page, and clicking **End Review Cycle**.

Initiating the Review Cycle

Now that users have been assigned to various sections of the schedule, you can initiate a review cycle. This will send a notice (email) to contributors assigned to provide markup, notifying them that they may start their review.

Opening the View Cycle

1. To access the Review Cycle settings, open the **Delegation** tab from Iris and select **Manage Review Cycle**.

In the Manage Review Cycle screen, settings can be adjusted prior to initiating the cycle.

The Manage Review Cycle window opens.

Green: Percent of items marked up reducing duration

Orange: Percent of items marked up increasing duration

Yellow: Percent of items marked as planned duration is OK

White: Percent of items pending review

- Click **End Review Cycle** after markups have been submitted.

End Review Cycle

End Review Cycle to review Markup from team members

END REVIEW CYCLE

Marking Up the Schedule

8.0.0.2 Uncertainty

User assigned sections for markup and review can begin to provide feedback in the Markup view.

The My Markup Status confirmation box opens to show markup status information.

After the schedule is in the Markup view, contributors can begin to give feedback on the schedule. Markups made to increase or decrease durations on the schedule in turn generate uncertainty.

Uncertainty is an internal factor, such as quantity growth or productivity loss or gain. It evaluates duration or cost realism and plan confidence.

Scorecard Values

The scorecard provides a quick and easy way to give an estimate of whether the planned durations need to be increased or decreased. Selecting a percentage increases or decreases the duration by that amount.

		-50%	-25%	-10%	OK	+10%	+25%	+50%
		50	25	10	OK	10	25	50
		50	25	10	OK	10	25	50
	1	50	25	10	OK	10	25	50
	1	50	25	10	OK	10	25	50
		50	25	10	OK	10	25	50
		50	25	10	OK	10	25	50
		50	25	10	OK	10	25	50
		50	25	10	OK	10	25	50
		50	25	10	OK	10	25	50

As markups are made on the scorecard, the bars on the Gantt chart adjust accordingly. This gives project contributors a live view of how the schedule is impacted by their markups.

5. Go to the scorecard and adjust activities by selecting a markup score. Activities should show a Lock icon once selected, confirming the markup made.

6. Go to the Gantt chart and slide the start or end bars around to adjust duration.
- The scorecard will changes the icons to a pencil, signifying a custom duration adjustment was made.

Markups meeting or exceeding the threshold, established in the Manage Review Cycle settings, will change the Event Register icon to red, signifying the user is to add an event to the Events Register.

	50		10	OK	10	25	50
	50	25	10	OK		25	50
	50	25		OK	10	25	50
	50	25	10		10	25	50
	50	25	10	OK	10	25	

This page intentionally left blank.

CHAPTER 9 – SCHEDULE REVIEW PROCESS - RISK OVERVIEW

Review And Risk Process Overview

The Review process is where you can review feedback from markup, and apply a variety of intelligence rankings in order to run a risk assessment on your project.

Uncertainty is an internal factor, such as quantity growth or productivity loss or gain. It evaluates duration or cost realism and plan confidence.

A **Risk Event** is an external factor where events are discrete and measurable, such as third-party delays or unexpected labor shortages. It evaluates the probability of the event occurring, the schedule impact should the event occur, and any impact in associated costs.

Projects often tend to mix uncertainty and risks events together resulting in less accurate mapping of risk characteristics to projects. It is important to evaluate risk items and place each in their appropriate categories, Uncertainty or Risk Event.

Uncertainty Category

- Quantity growth
- Productivity loss/gain
- Evaluates duration/cost realism & plan confidence

Risk Event Category

- External factors such as:
 - 3rd party delays
 - Labor shortages
- Evaluates probability of occurring event plus schedule impact & associated impact costs

This feedback can come from the Markup process outlined in other topics. From here, the following review process steps can help you conduct a risk assessment utilizing a confidence level, called a **P-value**.

The below steps explain how to generate a Risk Adjust project:

1. From the Project View drop-down, select **Review**.

2. Select a P-value for instant insight during the review process by first selecting the **P-value** icon .

- A P-value of 100 represents a worst case scenario, while a value zero represents a best case scenario
 - You are assigning a confidence level against a target goal
3. Switch the **Uncert** and **Events On/Off** to be applied to the corresponding work package or terminal level.
- This feature includes or excludes that detail in the risk model. It is recommended to begin analysis with both options switched to the *On* position.

4. Move down the project and review contributor's Uncertainty rankings for each line item.
- When reviewing Uncertainty, there are three main options for generating adjustments to the project: Artificial Intelligence (AI), Human Intelligence (HI), and Risk Intelligence (RI)

5. As needed, assign **Register Events** to project items.

- Any item in a project may be assigned a Register Event
- The default categories are shown below:

The screenshot shows a modal window titled "Add new register event". It contains a category dropdown menu with "Threat" selected. A list of categories is visible below the dropdown: Threat (red dot), Opportunity (green dot), Issue (orange dot), Idea (blue dot), and Schedule Change Request (orange dot). To the right of the dropdown is a text input field labeled "* Title (required)" with the placeholder text "Title". At the bottom right of the modal are two buttons: "Clear" and "Add".

- After all uncertainty and events have been agreed to, you can access two main reports that provide insight into the project's risk:

- Risk histogram

- Tornado analysis

You can identify how often activities fall upon the critical path during Monte Carlo simulation runs. The image below shows the Criticality % view active.

Using Float Consumption, you can visualize hidden risk assignments due to float consumption and compare activity risk tolerance versus net impacts. The image below shows the Float Consumed and the Criticality % views active.

- 6. Adopt any part of the risk model by selecting **Adopt Markup** or **Apply Uncertainty adjustments to deterministic schedule**. Both options will run a Critical Path Method schedule calculation and generate a new risk adjusted project schedule.

Import/Export

You can Import and Export risks in the project register. There are options for Oracle PRA – Pertmaster and Deltek Acumen. These are simple Excel formats that can also be generated outside of any tool and used for importing into Schedule.

A screenshot of a dialog box titled 'Import/Export'. At the top left is a close button (an 'x' in a circle). In the center is a blue icon of a document with an arrow pointing out. Below this is a section labeled 'Action' with two buttons: 'Import' (selected) and 'Export'. Underneath is the text 'Import new or updated register events and their associations to activities within this project'. The next section is labeled 'File Format' with two buttons: 'Oracle PRA - Pertmaster' (selected) and 'Deltek Acumen'. Below that is a section labeled 'File (.xlsx)' with a 'Choose File' button and the text 'No file chosen'. At the bottom center is a large green button labeled 'IMPORT'.

Add Register Event

You can manually add a register event to the project register. Select **Add Register Event** and then define the event type and description.

Matrix Definition

The default matrix in the Knowledge Library is adopted when the project is created. The matrix can be tailored by project to create a probability and severity range that is appropriate for the project.

Events Register Register Types **Matrix Definition**

ATTRIBUTES EDIT

Description	Probability	Schedule Impact	Cost Impact	Color
Very Low	5%	7 days	\$100	
Low	25%	30 days	\$1,000	
Medium	50%	60 days	\$10,000	
High	75%	90 days	\$100,000	
Very High	95%	180 days	\$1,000,000	

P-Value Overview

Probability Values or **P-values** are the lens with which you can view instant feedback related to the affects risk or opportunity items have on the planned schedule and/or cost structure.

You can interact with P-Value to manipulate your visibility into a risk-adjusted project.

Select a P-value by clicking on the P-value icon  to show a drop-down displaying the options for selecting a value.

P-Value

Expected Value

0

Markup Feedback and Consensus

Once a markup cycle has been completed, it is ready for review. When selecting a line item for review, options appear in IRIS located on the right of the panel.

Sitework Permit		
AI	HI	RI
AI +4%	HI +14%	RI VC -50% C -25% R +/-10% A +25% VA +50% C
A +14% Markup distribution will be applied.		
Layer	Rem Dur	Constraint
Deterministic	21	
+3 AA	24	

The reviewer has three options for providing markup feedback:

- **Inference Engine (AI)** suggested distribution
- **Human Intelligence (HI)** to leverage the feedback given during the Markup phase
- **Risk Intelligence (RI)** allows you to assign designated uncertainty ranges to any line item

Inference Engine (AI)

In this example, if you use the Inference Engine (AI), it applies the suggested distribution of 4%.

Human Intelligence (HI)

If you use the **Human Intelligence (HI)** of +14%, using AA’s (delegate’s initials) feedback, that Remaining Duration will take +3 days longer (24d v 21d).

Risk Intelligence (RI)

By selecting RI, you have chosen to not use HI or AI for that line item.

Uncertainty ranges are based on one of five categories the following categories:

Classification	Range	Guidance
Very Conservative	50% - 100%	Could take as little as 50% less
Conservative	75% - 105%	Most likely less
Realistic	90% - 110%	Within +/- 10%
Aggressive	95% - 125%	Most likely more
Very Aggressive	100% - 150%	Could take up to 50% more

You may only use one type of intelligence source per line. By selecting RI, you have chosen to not use HI or AI for that line item.

Custom

Using the Custom Intelligence lets you use a user defined level of risk.

The screenshot shows the 'Multi-Use Commercial' interface. At the top, there are tabs for AI, HI, and RI. The RI tab is selected and highlighted with a red box. Below the tabs, there are several colored boxes representing different intelligence sources: AI (orange, -16%), HI (blue, -50%), RI (red, -25%), VA (green, +/-10%), and C (grey, +25%). The RI box is highlighted with a red box. Below the boxes, there is a text box that says 'Inference Engine suggests a distribution of 84% to 100%'. Below this, there is a 'Distribution' section with two buttons: 'Triangular' and 'Uniform'. The 'Triangular' button is selected. Below the buttons, there are two input fields: 'Min %' with the value '84' and 'Max %' with the value '100'.

Any changes that impact the project, either positive or negative, are shown in red.

Multiple User Feedback

In the event an item contains more than one member's feedback, you can still decide between the different intelligence types. The Layer column shows all the members that contributed to that item.

Notice here where three members contributed their feedback:

- AP (-7)
- BH (+13)
- CT (+7)

These values are added to the deterministic value to generate corresponding values.

If you decide to consider all the HI feedback, then a distribution triangle is automatically applied for the risk simulation distribution.

In some scenarios you have the option of setting a distribution to a triangular or uniform curve. A triangle uses the three points (min, likely, max) to generate a weighted distribution. A uniform distribution will use two points (min,max) as limits to a range and set the probability to an equal state for within the parameters.

If you want to discount or ignore a particular feedback, click on the contributor to remove them from the feedback. The distribution triangle adjusts automatically.

Distribution Options

When applying RI to a project item, you have the options to either set distribution to triangular or uniform distribution. A triangle uses three points of information, Min, Likely, and Max, to form a weighted distribution.

A uniform distribution uses two points, Min and Max to set limits on the range and models an even likelihood of hitting any points along the distribution.

Uncertainty Status

The Uncertainty Status column indicates what type of markup feedback is applied to each line item, using one of the following symbols:

Symbol	Markup Feedback Assigned
	Inference Engine (AI)

Symbol	Markup Feedback Assigned
	Human Intelligence (HI) with no markup values
	Human Intelligence (HI) with strong consensus, with little variations
	Human Intelligence (HI) with a large variation
	Risk Intelligence (RI) Very Conservative (-50%)
	Risk Intelligence (RI) Conservative (-25%)
	Risk Intelligence (RI) Realistic (+/-10%)
	Risk Intelligence (RI) Aggressive (+25%)
	Risk Intelligence (RI) Very Aggressive (+50%)
	Risk Intelligence (RI) Custom

For Human Intelligence (HI) feedback, you can hover over the symbol to find the variation percentage.

For Inference Engine (AI) and Risk Intelligence (RI) feedback, the Uncertainty Status Symbol will

be a  if using Triangular distribution and a square  if using Uniform distribution.

The lock symbol represents that an uncertainty value has been applied to that line item and locks that value in place. For example, if a user assigns an uncertainty value to a parent line item, that value will be assigned to all its' children lines, except for those that are locked in with a value previously assigned.

Once feedback on uncertainty and events are reviewed, you are ready to generate outcomes via Risk Histograms and Tornado Analysis.

Risk Histogram

The Risk Histogram visualizes results from numerous iterations made using the distributions assigned to line items. Click on the **Risk histogram** icon next to any line item to report against that point in the project.

By clicking on the Risk histogram icon at the top level, you can report on the total project, as shown below.

Blue bars indicate the number of iterations that land on a specific date; for this example, finish date. The information on the right provides insight into the probability of hitting the deterministic end date and indicate which dates align with various P-values. This example shows the following:

- A 6% chance of completing the project by the deterministic date of 13 Apr 21.
- P-75% shows a date of 21 Sep 21, a 161-day extension upon the deterministic date. This corresponds to the need for a contingency value of 161 days to be 75% confident in finishing the project on 21 Sep 21 or earlier.
- P-0% is best case scenario and conversely, P-100% is worst case.

Tornado Analysis

Tornado Analysis shows key drivers that are responsible for the largest impact to a risk model. There are two main modes to choose from, Activity Mode or Risk Mode. Click on the **Tornado analysis** icon to select a mode. Similar to Risk Histogram, selecting a tornado icon at the top level will report on the total project.

Cost Item Mode

Analyze the impact that terminal cost items have on the selected cost item.

In this example, the P-Value is set to 75 based on the selected P-Values Markers. Selecting **Analyze** shows the Uncertainties and Risk Events for the Cost Item Tornado Analysis.

Interact with the following options to explore your project in Cost Item Mode:

- View
- Level
- Display Number

9.0.0.1 Root node in Cost Risk

Importing the Schedule Export report from Estimate to Schedule > **Cost Risk** inserts a root node into the project. The root node captures project-level data in Cost Risk for you to reference and report on. It also retains the hierarchical breakdown of the Estimate file.

Risk Mode

Analyze the impact that risks have on the selected line item.

In the example below, you can visualize the most impactful risk events and their corresponding activities. The largest driver is Risk #3 (R3) on activity Establish Permitting Documents and accounts for 130d of risk exposure.

CHAPTER 9 – COST RISK

Cost Risk Overview

Cost Risk lets you conduct risk analysis and update cost based on review.

The Actual Cost column represents the actual cost for a selected cost item prior to simulations with the option to display risk adjusted amounts based on use selection.

This column can also be edited directly on the page.

ID	Description	Actions	Exclude	Actual Cost
104969_01.01.00.00	I-15 Tropicana_Re...	...		\$4,323
1.0100	Project Management	...		\$4,323
1.1.0100	Contract Milestones	...		\$4,323
1.1.1.DS	Design Start	...		4323

You can also generate an InEight Schedule Cost Risk Excel file that allows you to import it into Schedule Cost Risk view and produce risk adjusted estimates. These risk adjusted estimates let you adjust contingency in an estimate to cover risk identified in a project.

File name: C:\Users\Paul.\Documents\InEight Schedule Export File.xlsx

	A	B	C	D
	CBS Position Code	Description	Total Cost (Forecast)	Suspend
2		Prime Bond	\$46,977.85	FALSE
3		Price % Add-On	\$294,100.61	FALSE
4		Job Financing	\$21,729.23	FALSE
5		Indirect Cost Escalation	\$2,131.11	FALSE
6		Direct Cost Escalation	\$15,048.80	FALSE
7		Indirect Cost Add-On	\$5,749.87	FALSE
8		Direct Cost Add-On	\$103,828.34	FALSE
9	1	SITEWORK & ROADWAY	\$2,464,161.56	FALSE

14	1.3.2	Embankment	\$83,992.94	FALSE

Run Close

Import Cost Risk Items

Select the import icon to import a Cost Breakdown Structure into the Cost Risk page, which helps you produce a risk adjusted estimate.

The screenshot displays the InEight software interface. On the left, a table lists project tasks with columns for ID, Description, and Action. The 'Design Start' task is highlighted. On the right, a 'Design Start' panel shows a risk distribution chart with categories VC, C, R, A, VA, and C, each with a percentage range. Below the chart, input fields for Min (\$), Likely (\$), Max (\$), Min (%), Likely (%), and Max (%) are provided, with values 3, 4, 4, 75, 100, and 105 respectively. A red box highlights the 'Import' icon in the top right toolbar.

ID	Description	Action
104969_01.01.00.06	I-15 Tropicana_Re...	
1.0106	Project Management	
1.1.0106	Contract Milestones	
1.1.1.DS	Design Start	...
1.1.1.Mobe	Mobilization	
1.1.1.NTP2	Notice to Proceed 2	
1.1.1.Durati	Project Duration	...
1.1.1.Start	Design and Constr...	
1.1.1.SC	Substantial Compl...	

The cost risk file format import lets you import four different file types, which include InEight Schedule, InEight Estimate, InEight Control, and InEight Schedule.

The screenshot shows the 'Import Type' dropdown menu. The selected option is 'INEIGHT SCHEDULE (.XLSX)'. The dropdown list includes the following options:

- > InEight Schedule (.xlsx)
- InEight Estimate (.xlsx)
- InEight Control (.csv)
- InEight Schedule (WBS)

InEight Schedule imports the WBS from the Plan view page.

The Schedule .xlsx import lets you export an existing snapshot of the current cost risk schedule state, make any adjustments in Excel, and then import directly into the Cost Risk page.

You can import from Estimate and Control which imports values from each of these applications via .xlsx and .csv imports.

Only the InEight Schedule export type can be imported back in, and not the export.

If min/likely/max values or percentages are used, when importing from Schedule, ensure the use min, likely, max percentages toggle is turned *On*. If the .xlsx file being imported has a custom range, the uncertainty status must read Custom, then the pre-defined values configurations can be used.

The Schedule WBS import pulls the Actual Cost and Remaining Cost values, based on the assigned resources from the schedule.

Step by Step – Import Cost Risk Items

1. From the Schedule > **Cost Risk**, click the **Export** icon.

2. From the Export Type drop-down, select either **Data Import** or **InEight Schedule**. Open either file to change the contents of the file for step 4 below.
3. Click the **Import** icon.

4. The Select File Format to Import pop-up window shows. The import type of InEight Schedule (.XLSX) is the default import type, and only accepts .XLSX file types. InEight Estimate also only accepts .XLSX file types. InEight Control only accepts .CSV file types, while InEight Schedule accepts only WBS file types.

5. You can either drag and drop a file into the upload portion of the window, or you can select the **Select Files** button to select a file.
6. Click **Import**.

Estimate Cost Risk Export

You can generate a Schedule Cost Risk Excel file in Estimate, which lets you import it into the Schedule Cost Risk view and produce risk adjusted estimates. This can be accessed in Estimate > Setup > Reports > **InEight Schedule Cost Risk (.xlsx)**.

These risk adjusted estimates let you adjust contingency in an estimate to cover risk identified in a project.

The InEight Schedule Cost risk (.xlsx) fine can be generated from

File name: C:\Users\Paul.\Documents\InEight Schedule Export File.xlsx

	A	B	C	D
	CBS Position Code	Description	Total Cost (Forecast)	Suspend
2		Prime Bond	\$46,977.85	FALSE

Run Close

Control Cost Risk Export

You can create a Cost Risk .CSV export specific view from Control in Control Workspaces. See the [Viewsets](#) topic to view more information on how to create viewsets. This helps you to more quickly revert to the Cost Risk Export Workspace view, when you need to export the cost risk associated data from Control.

Create a new datablock to show the CBS Position Code, Description, Actual Cost (to date), and the Forecast Remaining Cost columns. View the [Datablocks](#) topic to view more information how to to create datablocks.

Select the Export icon to export the Control Cost Risk View data from Control.

Control / Workspaces

CHAPTER 10 – SHORT INTERVAL PLANNING

10.0.1 SIP Overview

Activities from the CPM Schedule show in the Short Interval Planning (SIP) view that are grouped, based on how the Plan view WBS is organized. Each activity can be planned daily by adding the specific steps, or tasks, to be completed. Red and blue bars represent the CPM planned duration. The green colored boxes represent the days that tasks for the step will be done.

10.0.1.1 Planning Steps/Tasks

Steps are created by selecting the Add icon in the toolbar. After steps are added, you can then select the step to fill in information for description, dates, duration, planner, and SIP units or quantities for the task to be completed.

The screenshot shows the top toolbar of the SIP software with a red box highlighting the 'Milestones' icon. Below the toolbar is a table with the following data:

ID	Description	Start	Finish	SIP Steps	Planner	SIP Planned
4072	Install and Maintain Environments					
4073	Code-merge Install Landscaping (QSR)	1 Jan 2025	15 Jan 2025			
4074	Step 40	1 Jan 25	7 Jan 25	5	None	
4075	Step 41	1 Jan 25	7 Jan 25	5	None	

10.0.1.2 Milestones

Milestones are visually indicated on the SIP timeline and in the SIP activities. This provides clarity and reference to important dates when updating the short term plan on a project. When a blue milestone icon (◆) or a red critical milestone icon (◆) shows in the date timeline, you can click the icon to open a link and jump to the milestone in the step task chart.

10.0.1.3 Resources

When adding steps, you can assign predefined SIP resources to complete the steps or create and assign them in real time. If the resource does not exist in the schedule, enter a UoM and units, save the resource, and then apply it to steps while planning. You can also enter SIP units to set and track daily progress for the resource.

10.0.2 Short Interval Planning View

When a schedule is ready for production, schedulers can move to the Short Interval Planning (SIP) view to begin planning out the day-to-day tasks involved with completing scheduled activities. This type of planning can be done in intervals of 17, 25, and 50 days based on a selected interval.

To open the Short Interval Planning view, go to the project navigation menu and select **Short Interval Planning** from the list.

In the SIP view there are three primary sections:

1	Toolbar	Contains view adjustment settings such as, filtering, grouping, annotations, and date range.
2	Activities	Work package and activity structure are brought in from the Plan view. Tasks are further broken out in the SIP view.
3	Calendar	Shows a segment, or interval, of the schedule based on settings in the toolbar.

Step actions and functions

The toolbar shows SIP step and action icons, view options, and other functions.

The SIP step action icons show enabled in the toolbar when you are actively in a step.

Description	Function
Add step	Adds a step under the selected activity.
Zoom to start	Moves the Gantt chart to show one day prior to the step start date.

Description	Function
Add comment	Opens a dialog box where you can type text and save a comment for the step.
Add SIP resource	Opens the Add SIP Resource dialog box where you can select and assign an existing SIP resource for the task. Add values for units or quantities to track progress at a granular level.
Remove step	Deletes the selected step.
Copy	Opens a dialog box that lets you copy the selected step or steps into other activities.
Snap To	Lets you select multiple steps in an activity and move them to new dates while maintaining the relationship relative to the initial step in the activity.

The SIP functions include [Builder Menus](#) with SIP view variations that have similar functionality to those in other Schedule views.

Description	Function
View options	Select metrics, view row numbers, annotations, color coding for the view, and resource histogram.
Detail level	Select the level of detail shown in the Activities section.
Refresh SIP data	Click to update the view with the latest changes.
Export	Exports the current view to an Excel spreadsheet.
Zoom level	Sets the date range interval shown in the calendar.
Views	Use column filters to group and sort, then save as a view. Can also use templates and View builder. By default, the SIP Units/Qty and Row Numbers toggles are set to <i>On</i> .
Group By	Allows you to see activities grouped together based on the option selected. This functionality provides flexibility to schedulers and execution planners in how they want to organize and assess tasks, resource utilization, and activity progress. You can also group activities and tasks by codes when knowledge tags are used on the project.
Sort	Filters the columns according to the parameters selected.
Filter	Opens the filter function to set parameters for the activities and tasks that

Description	Function
	show in the view.
Column Set	Allows you to add and remove columns to customize the view. Column sets can be saved and reused.
Search	Search and find a specific task or step.

SIP resource histogram

The SIP resource histogram lets you perform resource management at a short-term plan level that gives you another level of granularity when analyzing resources. The SIP resource histogram shows the assigned SIP resources for the project with functionality like the Plan view resource histogram. In SIP view, click the **View options** icon. Under Resources, select **Histogram** to show SIP planned units in the view. In the Status drop-down list, you choose additional SIP data to show in the histogram.

Activities and steps

In the Activities section, Schedule activities from the CPM are shown. Each of these activities can be broken into steps or tasks for more detail when planning field execution.

Planning packages and activities are shown in a hierarchy. Planning packages group activities the same way as in the CPM schedule. Each activity line shows a planned start date, end date, activity ID, and the activity description.

When steps are defined, they show as a subordinate of the activity. An overview of the step details are noted that includes, start date, end date, duration, planner, and quantity.

Activities	Start ↓↑	End	Days	Planner	Units
^ Pipeline	1 Jun 18 A	1 Nov 33			22,600
^ Design	1 Jun 18 A	10 Feb 23			17,600
^ Piping	1 Jun 18 A	7 Jun 22			17,600
^ A2340 30% Design	1 Jun 18 A	12 Jul 18 A			
Step 38	1 Jun 18	7 Jun 18	5	None	▼
Step 37	1 Jun 18	7 Jun 18	5	None	▼
Step 36	1 Jun 18	7 Jun 18	5	None	▼
Step 26	1 Jun 18	7 Jun 18	5	None	▼

In the SIP step, you can track progress of a resource for the task. Values can be edited directly in the step and depending on the field that is changed they are calculated as follows:

- SIP Planned Units/Qty – Values entered are spread evenly across all days.
- SIP Actual Units/Qty – Values entered are spread evenly across all days prior to current day.
- SIP Remaining Units/Qty – Values entered are spread evenly across days after current day.
- SIP At Complete Units/Qty – Shows the value entered. Use to adjust for a forecast that is greater than the budgeted value in SIP Planned Units/Qty.
- SIP Units/Qty % Complete – Updates both actual and remaining units. The percentage shown is value of $(\text{SIP Planned Units/Qty} - \text{SIP Remaining Units/Qty}) \div \text{SIP Planned Units/Qty}$.
- SIP Duration % Complete – Shows the percentage calculated value of the number of SIP dates prior to current day $\div$ total number of SIP steps.

Use the column chooser to select the SIP Units/Qty columns you want to show.

[illegible]

You also have the option to track actuals at a more granular level if needed. Click the **Add SIP** resource icon and enter values for the specific dates.

[illegible]

Copy

Select rows in an activity to copy, and then click the **Copy** icon to open the Copy SIP Steps dialog box. In the dialog box, you can select up to ten activities to copy the rows into. You can also choose to remove steps that are selected from the list to be copied.

Snap To

You can select and move individual activity steps to a new date on the timeline. The Snap To feature lets you select multiple steps in an activity and move them all to new dates, maintaining the relationship relative to the initial step in the activity.

After you select the steps to move in the activity, click the **Snap To** icon to open the dialog box. Click in the **Snap to Start Date** field to open the calendar, and then select the new start date for the initial step. In the Include column, use the toggle to add or remove steps to move.

After selecting the new start date, click **Preview** to show an overlay of the steps with the new start date. You can save the changes in the preview or click **Back** to close the preview and open the dialog box again to make additional changes as needed.

Calendar

Click the **Zoom level** icon in the toolbar and select the calendar date range of the SIP view header to 3 weeks, 30 days or 60 days. In the calendar there are two primary indicators, the blue and red CPM schedule activity bars, and the colored step bars.

The blue and red CPM schedule activity bars represent working days and non-working days. The thicker segments indicate working days in the activity's calendar and thinner segments are non-working days.

The colored bars in the step indicate the days that work is being done for the activity. As a Planner, you can click and drag the bars along the timeline to adjust the start date and end date of the step and add or delete days for the step.

Weather Settings

Schedule has built in functionality to pull in weather data when a project location has been set up in Project Settings > **Project configuration**. When this function is setup, the weather shows in the date column header for the current day and a forecast for the next seven days.

F	S	S	M	T	W	T	F	S	S	M	T	W	T	F	S	S
10	11	12	13	14	15	16	17	18	19	20	21	22	23	24	25	26

Click the **Weather** icon to open the selected day’s weather forecast. This data is powered by Open Weather.

CHAPTER 11 – REGISTER ITEMS

Organizational Register Items

Events Register

Knowledge Library Register Items can be viewed by accessing the Knowledge Library, and clicking on the **Register** tab

From the Knowledge Library, items can quickly be edited using the following fields:

1	2	3	4	5	6	7	8	9			
Verified	Id	Type	Description	Mitigation	Probability	Schedule Impact	Cost Impact	Score	Activities	KA	Delete
	R3	Risk	▼ Risk of competing work in the fabyard	Identify overflow yards	High	High	High	16	2	KA	
	R2	Risk	▼ Risk of change in permitting authority	Schedule review with permitting office	Medium	High	Medium	12	5	KA	
	R7	Risk	▼ Risk of unknown soil conditions		Medium	High	Medium	12	2	KA	
	R4	Risk	▼ Risk of final route may not be known until 30 days before site access		Low	High	Medium	8	4	KA	
	O2	Opportunity	▼ Opportunity of identify third party engineering firm to support design		Medium	Low		6	5	KA	
	R1	Risk	▼ Risk of design rework due to first of a kind design resulting in engineering dela	Work with client to refine requirements prior to design	Low	Medium	Low	6	14	KA	
	R6	Risk	▼ Risk of weld issues causing rework		Low	Medium	Low	6	1	KA	
	R5	Risk	▼ Risk of local regulatory changing requirements		Very Low	Medium	Low	3	5	KA	
	O1	Opportunity	▼ Opportunity of use alternate pre-fab modules to accelerate delivery		Medium					KA	
	R10	Risk	▼ Risk of Hurricane due to weather resulting in destruction						1	RM	

Name	Description
Verified	Items can be either created directly in the Knowledge Library, or pushed from individual projects. Items pushed from projects shows here as unverified, and are not used as Smart Suggestion options in other projects until verified.
Type	This describes the type of register item, such as Risk, Opportunity, and Action Item.

Name	Description
Description	Items descriptions can be edited at any time.
Mitigation	Mitigation strategies can be captured here.
Probability/Schedule Impact/Cost Impact	Probability and impact can be reviewed and edited in a centralized view. The scoring here becomes the default score when the risk is applied to a project.
Score	Based on the probability and impact of items, a score is automatically generated.
Activities	The number of times the register item appears schedules are shown here. Specific Project and WBS element appearances can be reviewed by clicking on the number. You can select the All drop-down to filter the list by project. 
Created By	The name of the user that raised the register item.
Delete	Deletes the item.

Register Types

Additional Register Types can be defined by selecting the **Register type** tab.

Import and Export

You can import and export risks in the project register.

There are options for Oracle PRA – Pertmaster as well as Deltek Acumen. These are Excel formats that can also be generated outside of any tool and used for importing into Schedule.

The export file closely reflects what is exported from the Schedule Plan view. A color-coded key has been added in the upper left corner in the export file that shows you the required, optional, validated, and ignored records. Additional mapping tabs are also included at the bottom of the Microsoft Excel file.

Add Register Event

You can manually add a register event to the project register. Select **Add Register Event** and define the event type and description.

Active	Id	Type	Description	Mitigation	Probability	Schedule Impact	Cost Impact	Score	Markup	Basis	Publish	Delete
☐												

Matrix Definition

Qualifiers applied to register items can have the Probability percentage, schedule impact, and cost impact updated to reflect your organization’s preferred values. This becomes the default matrix when creating a new project.

Events Register

Register Types

Matrix Definition

Description	Probability	Schedule Impact	Cost Impact	Color
Very Low	10%	≤ 11 days	≤ \$13	
Low	25%	≤ 30 days	≤ \$10,000	
Medium	50%	≤ 60 days	≤ \$100,000	
High	75%	≤ 90 days	≤ \$1,000,000	
Very High	95%	≤ 180 days	≤ \$10,000,000	

11.0.1 Project Register Events

The Project Register houses all events pertaining to the project. These events are used to notify schedulers of potential project ideas, changes, opportunities, threats, and issues.

11.0.1.1 Event Types

There are several Event types available in the Project Register. Of the available events, the following three are focused on: Idea, Opportunity, and Threat.

Idea

Ideas are events that do not necessarily yield a positive or negative schedule impact. Often, ideas are schedule notes regarding an activity. They might have a favorable or unfavorable outcome in the schedule and can be replaced with a Threat or Opportunity event if circumstance dictates it.

Opportunity

Opportunities are events with the potential to yield a favorable schedule outcome such as time savings or cost reduction.

Threat

Threats are events that may occur, posing possible schedule delays or increased cost on the project.

Event Values

When assigning an event to an activity, there are three additional fields to be populated depending on the type of event: Probability, Duration and Cost. These fields vary from event type to event type and not always need to be filled out. However, it is in the best interest of the team input as much information as possible for the Risk Analysis to be conducted.

● Lack of specs leads to re-design				SCORE
ID	Prob.	Dur.	Cost	
R5	%	🕒	💰	

- **Probability:** Likelihood of the listed event to occur and impact the schedule.
- **Duration:** Estimated days increased or decreased due to the event
- **Cost:** Estimated cost associated with the event
- **Score:** System generated value based on the Probability, Duration, and Cost Factors involved

Event Values

11.0.1.2 Events Library

In the Project Register Events Library, all events on the project and from the Knowledge Library are listed. These events can be selected and assigned to activities.

If a new event is to be created, the Project Register has an input field for new events.

Create an Event

1. To open the Project Register Events Library from the Markup Screen, click on the **Sticky note** icon of the activity or planning package the event will be associated to.

This icon might be red or yellow depending on the markup provided.

2. A new window opens with the Events Library.

3. At the bottom of the Events Library is the **Event Creation** function.
4. Click the **Event Type** drop-down menu to select from Risk, Opportunity, Issue, Idea and Schedule Change Request.

- Fill out the Event, Cause, and Effect fields. As these fields are populated, a summary of the event is shown below.

Risk

Additional Cure days

Cold Temperatures

Schedule Delay

+

Risk of Additional Cure days due to Cold Temperatures resulting in Schedule Delay

- Click the **Add** icon.
- Your selection now appears at the top of the window. Fill out the remaining fields (i.e. Risk - Probability, Duration, and Cost).

Risk

✖ Risk of Additional Cure days due to Cold Temperatures resulting in Schedule Delay

SCORE

ID	Prob.	Dur.	Cost
R2	%	!	\$

Risk

✖ Risk of Additional Cure days due to Cold Temperatures resulting in Schedule Delay

SCORE

ID	Prob.	Dur. ①	Cost	
R2	50%	30d	\$10K	6

- Close when finished.

11.0.1.3 Risk Range Scoring

The score calculation for risk range scoring is: Probability "%" times the greater of (Duration "Dur" range OR Cost "\$").

5 point = Very Low to Very High

7 Point = Extremely Low to Extremely High

9 Point = Ultra Low to Ultra High

Range	Score
Ultra Low	1
Extremely Low	2
Very Low	3

Medium	5
High	6
Very High	7
Extremely High	8
Ultra High	9

Project Register Items

Project register items (Risks, Opportunities, Action Items, etc.) can be reviewed at any point by clicking on the project view Risk Register link from the 1st level drop-down menu within a project.

From the Project Register, items can quickly be edited using the following fields:

1	2	3	4	5	6	7	8	9	10	11

Matrix Definition

The default matrix in the Knowledge Library is adopted when the project is created. The matrix can be tailored by project to create a probability and severity range that is appropriate for the project.

Description	Probability	Schedule Impact	Cost Impact	Color
Very Low	5%	7 days	\$100	Green
Low	25%	30 days	\$1,000	Light Green
Medium	50%	60 days	\$10,000	Yellow
High	75%	90 days	\$100,000	Orange
Very High	95%	180 days	\$1,000,000	Red

Assign Register Items

Register items consist of risks, opportunities, change orders, and any other qualifiers that your organization has defined.

Assign a Register Item

1. Go to the Plan view from the first level drop-down menu in a project, and then select a WBS element.

ID - Description	Actions	Register	Start Date	Finish Date	Remaining
Commercial Construction	...		26 Apr 2021	22 Sep 2022	36
General Conditions	...		26 Apr 2021	18 May 2021	17
Receive notice to proceed and sign c...	...		26 Apr 2021	28 Apr 2021	3
Submit monthly requests for payment	...		29 Apr 2021	29 Apr 2021	1

2. In the rightmost panel, expand project register, and click **Add event**. This causes a dialog box to open, showing any currently existing register items. New items can be added by selecting the

item type, and typing in the event, cause, and effect.

The screenshot shows a software interface with a modal dialog box titled "Submit shop drawings and order long lead items - electric 2.5". The dialog has a close button (X) in the top right corner. Inside the dialog, there is a section "Add new register event" with a dropdown arrow. Below this, there is a "Threat" dropdown menu with a red circle icon. To the right of the threat menu is a required field "Title" with a placeholder "Title". Below the title field is an optional field "Description" with a placeholder "Enter description". At the bottom right of the "Add new register event" section are "Clear" and "Add" buttons. Below this section are two expandable sections: "Existing register events" and "Suggested register events", each with a right-pointing arrow. A red arrow points from the "Add Event" button in the background interface to the "Add" button in the dialog box. The background interface shows a sidebar with various project management tools like "Smart Planning", "Logic", "Knowledge Tags", "Project Register", "Delegation", and "Resource Assignments". The main area shows a calendar view for the year 2021.

3. Click the icon to add the register item to the WBS element. Enter a probability, schedule impact, and cost impact to quantify the event. The available quantifiers are set up by your administrator based on the register item type.

11.1 INEIGHT SCHEDULE WORKFLOWS

11.1.1 InEight Schedule - Focused Workflow

This workflow shows the modules (or views) that make up the InEight Schedule application. It lists the key functions of each view and the relationships the views have to each other.

InEight Control General Workflow

11.1.2 Scheduling & Short Interval Planning Workflow

This interactive workflow looks at the key functions of InEight Schedule through the lens of a typical scheduling business process. As you click on each business process step, the workflow highlights the key functions involved, along with the InEight Schedule view you would use for that step.

Scheduling & Short Interval Planning Business Process

11.1.3 Scheduling Business Process Workflow

Similar to the previous workflow, this workflow also diagrams out the typical steps involved in a scheduling business process, but includes additional detail, including touchpoints between InEight Schedule and other InEight applications.

11.2 SCHEDULE FREQUENTLY ASKED QUESTIONS

How can I get schedule changes in and out of InEight Schedule?

As you manage a detailed schedule within the Plan view of InEight Schedule, you will need to make adjustments and changes. You may need to import change information from other sources, or export schedule changes to use in other applications.

You can import and export schedule data using the Import and Export options in the right toolbar within the Plan view.

For import, you have the options to import WBS items, activities, logic, codes, user-defined fields and resource assignments, using an Excel import file.

Notes:

1. To update a logic link **Type**, you must delete the existing logic link and create a separate row for the new logic link type

2. Lags can be both positive and negative

Predecessor Activity ID	Predecessor Activity Description	Successor Activity ID	Successor Activity Description	Lag	Type
Text	Text	Text	Text	Numeric	Text: "FS", "FF", "SP", "SS"
256	256	256	256	2	FS
A1430	Install Spool 3	A1540	Complete Line A	0	FS
A1530	Start Line A	A1410	Install Spool 1	0	SS
A1510	Spool 5	A1520	Spool 6	0	FS
A1500	Spool 4	A1510	Spool 5	0	FS
A1490	Spool 3	A1500	Spool 4	0	FS
A1290	Mechanical O	A1270	Mechanical B	0	FS
A1200	Electrical "L"	A1190	Electrical "B"	0	FS
A1280	Mechanical L	A1290	Mechanical O	0	FS
A1260	Mechanical S	A1230	Electrical "K"	0	FS
A1200	Electrical "L"	A1210	Electrical "O"	0	FS
A1230	Electrical "K"	A1240	Electrical "S"	0	FS
A1310	Mechanical K	A1280	Mechanical S	0	FS
A1270	Mechanical B	A1190	Electrical "B"	40	FF
A1290	Mechanical O	A1210	Electrical "O"	40	FF
A1280	Mechanical L	A1200	Electrical "L"	40	FF
A1260	Mechanical S	A1240	Electrical "S"	40	FF
A1310	Mechanical K	A1230	Electrical "K"	40	FF

For export, you have several options, including:

- Primavera P6 XER
- Excel Export
- MS Project MPP

How can I manage my resources in the Schedule Plan view?

From the Plan view of InEight Schedule, you can assign resources to an activity by selecting the **Actions** ellipses and selecting **Assign resource assignments**. This opens a window where you can select from available resources or add new ones to the activity, along with productivity and cost information.

Once added, you can review your resources' planned and actual productivity by turning on the Resources Histogram from the View Option menu.

I’ve set up groupings, filters, and column sets in my Plan view. How can I save them?

If you’ve customized your Plan view by applying groupings, filters or columns sets, you can save the view by selecting **Views** from the left toolbar and selecting **Save current view**.

How can I compare multiple schedules?

To compare multiple schedules, you can take snapshots and designate which ones to compare on the Baseline/Snapshot Management slide-out panel in the Plan view. You access this slide-out panel from the right toolbar.

You can perform this same function at any WBS level.

Published schedules (or portions of a schedule) are stored on the CPM Schedules tab in the Knowledge Base. An Administrator must review the schedule and mark it as Verified prior to it being used.

In existing schedules, at the WBS level, you can add portions of a schedule from the Knowledge Base. This is done from the Iris panel, under the Smart Planning section.

See Also:

[Knowledge Base](#)

Can InEight Schedule integrate with other InEight applications?

InEight Schedule currently includes import/export functionality to share schedule data between applications via Microsoft Excel and .XER files. Development is underway to more tightly integrate InEight Schedule with other applications including InEight Estimate and InEight Plan.

What is the difference between Short Interval Planning (SIP) resources and resources?

Resources used for scheduling in the Plan view are for considering durations, productivity and costs for the entire CPM schedule for the project and are assigned at the higher activity level.

SIP resources represent the labor, equipment and materials tracked on look-ahead schedules managed by the field team. These look-ahead or short interval plans break schedule activities down into the day-to-day steps to execute the work in the field and track the SIP resources at the step or task level.

Is there a standardized fill-down option in InEight Schedule?

Yes, there is a fill-down feature for calendars, codes and resources, where you can specify a value at a summary level and have it apply to the child elements below it. You access the Fill down feature by clicking on the Actions ellipses of your summary level item.

See Also:

[Project Resources](#)

How do we manage multiple schedules with external relationships?

InEight Schedule does not support a program level of schedule management, where distinct schedules for different projects are managed under a single program and have external relationships between them. You can still manage multiple schedules with relationships between them, however, by importing the individual schedules into one “master” schedule and then establishing logic links between them as needed.

Use Case 1: InEight Schedule only

Publish each schedule to the Knowledge Base, then add WBS items representing each schedule and import the corresponding schedule from the Knowledge Base for each WBS item using the Smart Planning feature.

Use Case 2: InEight Schedule and Primavera

Select multiple schedules in Primavera and export them as a single structure in an XER file. Then import the .XER file into InEight Schedule, where it becomes a single “master” schedule structure containing the individual schedules exported from Primavera.

Can we copy/paste data from the InEight Schedule Plan view to Excel?

You can send data from the InEight Schedule Plan view to Excel using the **Column Set Builder** and the Export feature. From the Column Set Builder Menu, select the Column Set Builder to specify

what columns you would like to include for exporting to Excel.

Then, you can export that set of columns and their related data to Excel, by selecting **Export** on the right toolbar.

How do I capture progress from field personnel?

InEight Schedule includes a review cycle feature that can be used to obtain progress updates from the field.

See Also:

[Input Progress](#)

Are my resources the same resources as are in InEight Control/Cloud Platform?

The resources used in InEight Schedule (both at the Knowledge Base and Project levels) are distinct from the resources used in other InEight applications. Any coordination of resources used by the different apps would therefore need to be managed via internal processes within your organization. For example, your organization could define a standard set of resources used by the company and share that list out to the various project teams to import or manually input within

each application.

How do I update my InEight Schedule from an .XER file?

You can import schedule data via an .XER file using the Import schedules function on the left toolbar of the Project List page.

Note that when importing you can import historical data from another schedule to bring in additional information including planners, assignments, and short interval plans.

How do I get access to a schedule from within the InEight Cloud Platform?

You can access InEight Schedule from the InEight Cloud Platform, either from an organization or project level. If you select Schedule from the Organization home page, it takes you to the Project List page within InEight Schedule, where you can then select your schedule as needed. If you

select Schedule from a Project home page, it will take you to InEight Schedule, and will be filtered down to that specific project’s workspace on the Project List page, making it easier to get to the schedules related to the project.

How do I link my schedule workspace to a project in InEight Platform? In the future, will schedule workspaces be created automatically when an InEight Platform project is created?

From the Project List page of InEight Schedule, you can link a schedule workspace to a project in InEight Platform by selecting Link project on the left toolbar.

In the future, the schedule workspace will be created automatically when an InEight Platform project is created.
