INEIGHT CONTROL OVERVIEW

Lesson Duration: 30 Minutes

Lesson Objectives

After completing this lesson, you will be able to:

- Describe the InEight cloud platform and how it relates to your project management process
- Define InEight Control and its purpose

Lesson Topics

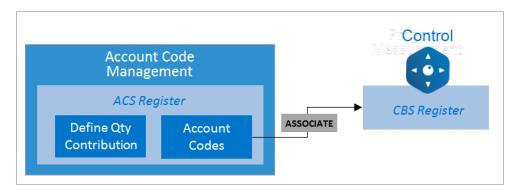

1.1 INEIGHT CONTROL OVERVIEW

As one of the applications within the InEight portfolio of products, InEight Control is a project management tool used for:

- Managing account codes
- Measuring progress
- Forecasting final man-hours and costs
- Managing revenue
- Managing budget/contract changes

1.1.1 Account Code Management

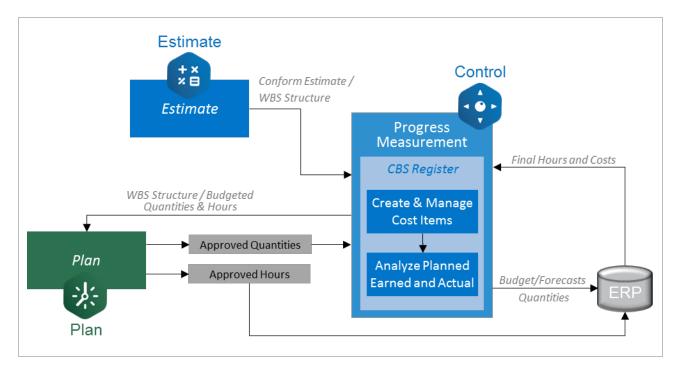

Within InEight Control, you can define and assign account codes to your cost items. This association can be synced to your ERP, and can also be used to benchmark data with other projects.

1.1.2 Progress Measurement

InEight Control is the application where your Cost Breakdown Structure and budget are established and where you can monitor project progress. You can:

- Import your conformed estimate and structure from InEight Estimate
- Create and manage cost items
- Import approved quantities from InEight Plan
- Import final hours and costs from your ERP system
- Track your actuals and compare them against your Current Budget and earned values

The following workflow illustrates how these functions relate and pass information between systems.

You can utilize this information to analyze trends, track productivity factors, and measure progress.

Tasks		:	Progress Ove				
	CBS Pos	Description	% Complete 👘	C B-Total C	C B-Earned Total	Total Cost (To Date) 👘	C B-Total Cost G/L (T
		Infrastructure	0.01	\$14,193,548.20	\$80,054.65	\$3,000.00	\$77,051.61
	1.1	Mobilization	0.00	\$10,794.00	\$0.00	\$0.00	\$0.00
	₹1.2	West Screen Demolition	0.38	\$4,605.59	\$1,772.88	\$3,000.00	(\$1,227.13)
	1.2.1	West - Removal-Conduit	0.34	\$3,448.93	\$1,172.88	\$3,000.00	(\$1,827.12)

1.1.3 Forecasting

InEight Control provides options for forecasting final costs, man-hours, and productivity for your project.

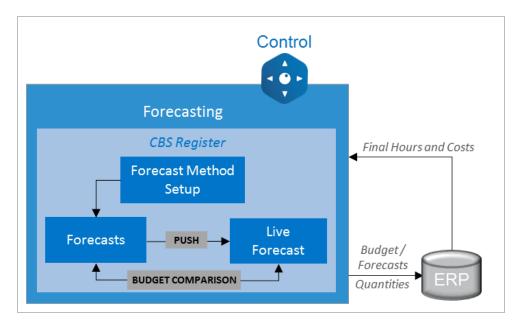

Tasks		Task details < •••• >				Forecast Creat	< ••• >		
	CBS position	Description	Resource	Forecast (T/O)	UoM	Forecast final	Forecast final	Forecast final man hours/Unit	Forecast final productivity factor
	2	Earthwork	5	10,000.00	CY	\$ 400,000.00	8,000.00	0.80	1.
	3	Concrete	6	10,000.00	СҮ	\$ 1,500,000.00	30,000.00	3.00	1.
	∧ 4	Structural Steel		1,000.00	Ton	\$ 1,000,035.71	20,000.71	20.00	1.
	4.1	Erect Steel - Heavy	5	800.00	Ton	\$ 800,000.00	16,000.00	20.00	1.
	4.2	Erect Steel - Light	5	200.00	Ton	\$ 200,000.00	4,000.00	20.00	1.
	4.3	Bolted Connections	8	2,000.00	Ea	\$ 35.71	0.71	0.00	1.

You can forecast your remaining work based on any of the following Forecast Methods:

- Current Budget
- Current Estimate
- Average performance
- Committed Cost
- Manual Entry

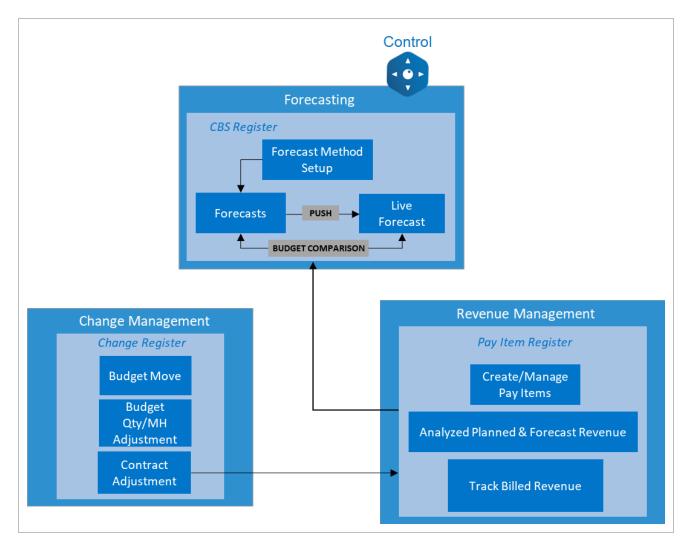

You can save personal forecasts, share them with others, and push them to a "live" forecast which can be reviewed by all and used for official reporting. You can also compare the Live Forecast to other forecasts created, for example to compare to the previous month's forecast.

The workflow diagram below illustrates how forecasting functions relate to the rest of InEight Control and other systems.

1.1.4 Revenue Management

Within InEight Control, you can create and manage pay items for tracking pay quantities, actual and forecasted revenue, and how much has been billed to the client.

1.1.5 Change Management

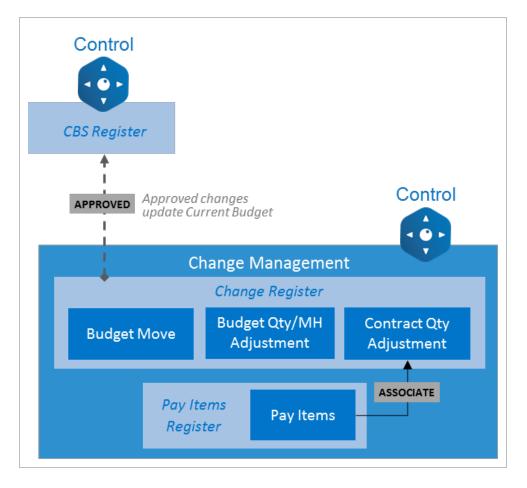

InEight Control allows you to manage changes to quantities, man-hours, and costs in each cost item as needed during the execution of the project. You can make three different kinds of changes within the Change Management register:

• **Budget move** – Movement of costs between cost items where the total dollars moved must balance to zero. There is no revenue associated with this type of change

- Budget quantity and man-hour adjustment change to quantities or man-hours within the project without changing costs
- Contract adjustment both the budget and the revenue either increase or decrease and are not required to be a net zero transaction. You will associate pay items with the change order to reflect the revenue change

Approved changes update your Current Budget within the CBS register.

The below workflow shows the relationship of Change Management to the rest of InEight Control.

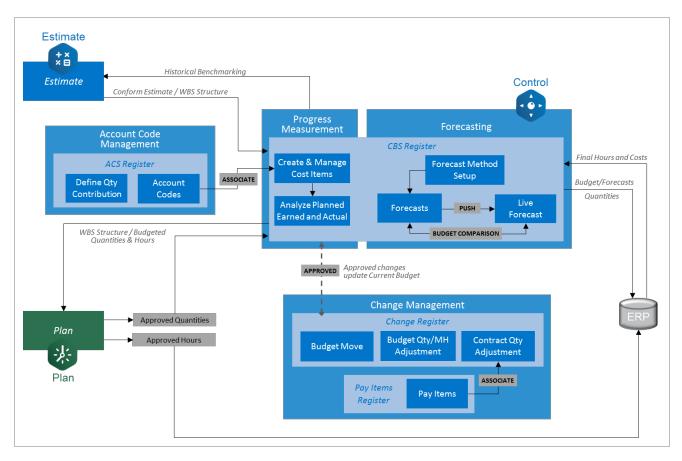

Below is an example of what the Change Register looks like in InEight Control.

Change R	legister										
D	- CCO	-	Issue #	-	Description	Туре	-	Discipline	÷	Total Budget \$ adjust	-
20.0	001		001		Increase budget in the code for Plan and Progress	Contract adjustment			1	\$4,80	0.00
21.0					Increase budget quantity for proper production factor	Budget Qty&MH adjustment			1	S	0.00

Review

- 1. Which InEight application do you use for capturing time and quantities in the field?
 - a. InEight Control
 - b. InEight Plan
 - C. InEight Progress
 - d. InEight Inspect
- 2. What key data is imported from the ERP system into InEight Control? (Select all that apply.)
 - a. Costs
 - b. Quantities
 - C. Hours
 - d. Notes
- 3. Which of the following is NOT a function of InEight Control?
 - a. Budget Management
 - b. Daily Planning
 - C. Change Management
 - d. Progress Measurement
 - e. Forecasting

Summary

As a result of this lesson, you can:

- Describe the InEight cloud platform and how it relates to your project management process
- Define InEight Control and its purpose

GENERAL NAVIGATION

Lesson Duration: 45 minutes

Lesson Objectives

After completing this lesson, you will be able to:

- Navigate the InEight Control Workspaces page
- Manage columns
- Group Pay Items
- Manage data blocks
- Create viewsets
- Change row density

2.1 PAGE NAVIGATION

In the following lesson, you will open the InEight cloud platform to explore the layout and start to navigate around the application. You will access InEight through your web browser, using the link provided by your manager or facilitator.

This takes you to the All projects & organizations page, where you can select any project you are associated with.

				PROJECTS	ORGANIZATIONS

2.1.1 Right Toolbar Overview

The right toolbar allows you to use functions for the register page displayed. The toolbar options will change depending on what tab you have selected (CBS, ACS, Pay Items, Change Register, Audit Log). You will most commonly use the right toolbar for the CBS register page:

Overview – Workspaces Page CBS Tab – Right Toolbar

	lcon	Function
1	Group Columns	Allows users the ability to group rows of the cost breakdown structure by like information from selected columns.
2	Undo	Undo button to undo changes.

Overview – Workspaces Page CBS Tab – Right Toolbar (continued)

	lcon	Function
3	Display Currency	Change currency displayed in data blocks.
4	Add Data Block	Add a data block to your register view.
5	Import	Import CBS Data or Actuals from an Excel File.
6	Export	Export your register view to an Excel file. Only the data blocks currently displayed on the page will be exported to the file.
7	Row Density	Adjust the line height at which the register content is displayed. Options are relaxed, narrow, or tight. Allows for more lines to be viewed on the page if desired.
8	Find	Find value in register content by selecting a data block column, selecting either the Begins with or Contains criteria, then entering the value to search for.

2.2 COLUMNS/GROUPING/SORTING

InEight Control allows you to customize columns in your data blocks according to your preferences. Changes made to the placement of your columns will be retained the next time you access any page you have customized.

2.2.1 Move Columns

You can move a column from one place to another to customize your view using drag and drop.

Move Columns

1. On the Pay Items tab, click and hold any column.

Pay it	ems	. <u>–</u>	Line number	Row number	Total price	Unit price	Pay quantity
	001	Eart	1	1	\$759,887.01	\$759,887.01	1.00
	002	Con	2	2	\$2,919,020.71	\$2,919,020.71	1.00
	003	Ste	3	3	\$1,821,092.28	\$1,821,092.28	1.00

2. Drag it to the left of right of another column.

		Total price			
 Row number	-	Total price	Total pl	Pay quantity	-
1		\$759,887.01	\$759,887.01	•	1.00

• Two black arrows appear to guide you to the location the column will be dropped

2.2.2 Sort Columns

You can sort columns in ascending or descending order for both for alpha and numeric fields on any column by clicking once on the column header.

Sort Columns

- 1. On the CBS tab, select any **column header**.
 - A yellow arrow appears, facing downward, indicating that you are sorting that column alphabetically from A-Z or numerically.
- 2. To revert the sort, select the **column header** again.
 - The yellow arrow faces upward indicating the reverse sort.
- 3. Select the **column header** once more to return the column to the original sort.

2.2.3 Filter Columns

You can filter your column data to show only specific, pertinent information that you need. There are two ways to set a filter:

2.2.3.1 Method 1: Filter from Column Header

You can set a filter for a column by clicking on the filter icon on any column header. This brings up a drop down list of items that you can filter by to apply to that specific column.

Task details	< •••• >		Live forecast
Resource	Forecast (T/O) quantity	UoM	Tinal cost
	1.00000	PLS	Show items with value that:
	1.00000	PK-UoM-01	Equal
	10.00000	K\$	equal
1	450.00000	QA_Test-01	Select value _hm
1	200.00000	#NAME?d	AND
1	100.00000	K\$	AND
	10.00000	K\$	Equal
1	0.00000	Lb	Coloring to a
	1.00000	PLS	Select value
	1.00000	PLS	Clear Apply
	1.00000	PLS	Clear Apply
	0.00000	14.4	1

NOTE If you wanted to remove a single filter, locate the column you filtered, click the filter icon, and select the **Clear** button.

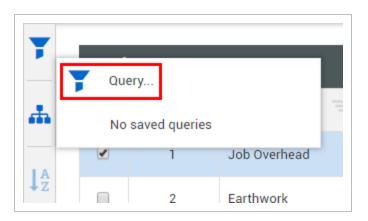

On the resulting filter, you can hover over the filter icon on the right icon selection to view which filters are applied.

	 UoM equ 		
F		method equal Current	
	L	1.1.1.8	_
.		1.1.1.0	
.		1.1.7	К
-			K te

Selecting the filter icon will remove all the filters applied to the columns.

2.2.3.2 Method 2: Filter from Right Toolbar

You can also set a filter by selecting the Filter icon from the right toolbar and selecting Query.

This option is helpful when you:

- Need to search for the column you need to filter
- Need to apply filters to more than one column

Selecting the Filter icon from the right toolbar opens the Query builder slide out panel, where you can set the filter value.

2.2.3.3 Filter Slide Out Panel

The Filter slide out panel contains three key settings:

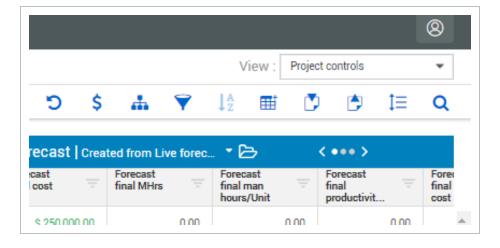

Filter Settings

	Title	Description
	Columns	Drop-down list to select the column to filter.
2	Operator	 Determines what kind of filter to apply. Includes the following Equal Greater than Greater than or equal Is not null Is null Less than Less than or equal Not equal
	Query Name	Name of query.
Г	New query name	•
(Columns	s Operator: 1 Value: 2 (T/O) quantity Equal - X

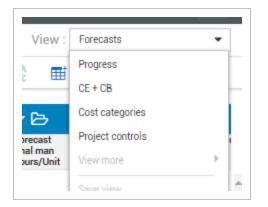

The following steps walk you through how to set a filter using the filter icon on the right toolbar.

Filter Columns

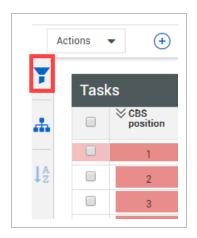

1. From the CBS tab of the Control Workspaces page, click on the View drop-down arrow.

2. Select the **Project controls** viewset.

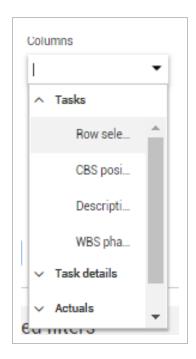

3. Select the **Filter**, then **Query** icon from the left toolbar.

• The Query builder slide out panel appears

New qu	ery name	-	\bigotimes	
	Columns	Operator:	Value:	
(+)		 Contains 	•	(\mathbf{x})

4. Click on the **Columns drop-down arrow** to select a column.

- Notice that the column titles are grouped by the data block in which they are housed
- 5. Select the Forecast Method column.
 - This can also be typed into the text box to search for the column you need
- 6. Click on the **Operator drop-down arrow** and select **Equal**.

Query b	uilder		
New que	ry name	▼ 🖪 😣	
\sim	Columns	Operator:	Value:
(+)	Forecast method	Equal	Current budget
		Is not null	
		Is null Not equal	

7. Click on the Value drop-down arrow and select Rollup.

New que	ry name	•		
	Columns	Operator:	Value:	
+	Forecast method	Equal	🔹 Rollup 💌 🛞	
			Current budget Current estimate Average performance Manual (EAC) None Rollup Manual (ETC)	

Note that you can add additional filter criteria by clicking the plus icon

- Note that you can click **Save** to add the filter to the My saved filter section for future use
- 8. Click **Apply** to apply the filter.

2.2.4 Pay Item Grouping

Pay item grouping allows you to group your data in the most efficient way that makes sense to you. This is useful if you want the option to group certain columns, and subtotal pay items.

			<	PAY ITEM:	S	CHANGE REGIS	STER	AUDIT LO	G >			
Actions	• +	\otimes								7	↓ ^A Z	‡≡
Billing	methods $ imes$					G						
	Pay item number	- De	Line number 😑	Row number =	Total price	Unit price	Pay quantit =	Foreca: (T/O) Qty	UoM	ls billed 📃	Billing methoc =	Chan order
Billing m	ethods: Cost Plus											
	Р1	Test	2	2	\$ 40.0000000	\$ 40.0000000	1.0000000	0.0000000	AU		Cost Plus	
	asdf	fawd	3	3	\$ 3,630.000	\$ 30.0000000	121.0000000	120.0000000	AU		Cost Plus	··· (3)
					\$3,670.0000							
Billing m	ethods: Fixed Fina	I Price										
	333		4	4	\$ 24,032.00	\$ 400.0000	60.0800000	90.0000000	Bag	<	Fixed Final	
	P_1	P_Test	7	7	\$ 250.0000	\$ 22.0000000	11.3636364	150.0000000	K\$		Fixed Final	(1)
					\$24,282.000							

The following steps walk you through how to set a pay item group by using drag and drop.

Pay Item Grouping

1. From the Pay Items tab of the Control Workspaces page, click and drag the **Billing methods** column header, and drop it in the space above.

Actio	ons 🔻 🤆	Ð 😣		CBS		ACS	PAY ITEMS	CHA	NGE REGISTER	AUDIT LOG		Ţ ↓ ^A Z	•
				_		Drag a column	header and drop	it here to group b	y that column	➡ Billing methods		Billing methods

2.2.5 Subtotal Grouping

Subtotal grouping lets you group your data based on the subtotals in the CBS. This is useful if you want the option to group certain columns. You can group the following columns:

- Forecasting columns
- Current Estimate
- Current Budget
- Actual columns
- Cost columns
- Man Hour columns

The following steps walk you through how to group by subtotals using drag and drop.

Subtotal Grouping

1. From the CBS tab of the Control Workspaces page, click the **Group By** icon.

				CBS	AC	S P	AY ITEMS	CHANGE REGISTER	AUDIT LOG		Vie	W : CE + C8	3	
Act	ions 🔻	⊕ 🖻 ⊗								C 🗉	\$	mt 🕑	3	t≡ o

2.2.6 Pay Item Move Option

The move to feature is the only way to adjust the pay item order. This feature is similar to the adjust CBS position feature in the CBS register. For a pay item to become a parent, billed revenue, billed quantity, and current price must be zero, and no cost items can be assigned to it.

Selecting one or many pay items activates the Move to icon.

≡	යි Stee	el Structure	Trainir	ng Job 10	5091 / Co	ontrol / Workspac
						CBS
Actio	ns 🔻	(+)	\otimes	•	Move to

	1			001	E	arthwork - Lab
	2			002	С	oncrete - Lab
	3			003	S	teel - Labor &

Selecting the move to icon opens the move-to field, where you can select the pay item you want to move your selected pay item to.

≡	ଜ	Ste	el Structure	e Training	Job 105091 / Control / Workspaces		
					CBS	ACS	
Actio	ons	•	(+)	\otimes	2 - 002 - Concrete - Labor & Material		0

After selecting the move to pay item and then clicking on the Move to icon, you have the option to move the pay item as a child or a sibling.

					CBS		ACS
Actions	•	(+)	\otimes	Move to 2 as:	🚍 Child	E Sibling	0

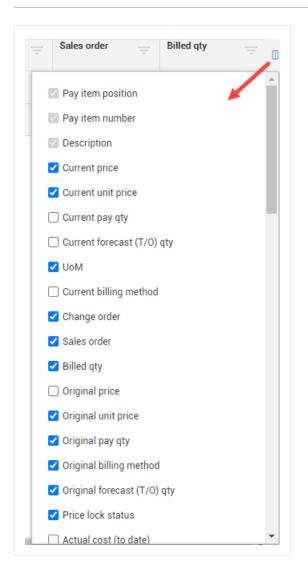

2.2.7 Pay Item Views

After your page view is arranged to your preference in the Pay Items page, you can create and save pay item views.

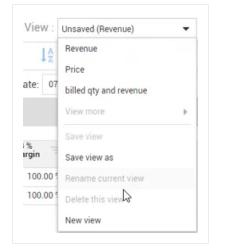

The pay item view feature lets you select which columns to display in the current Pay item view, with the Price and Revenue views as the default views.

	PAY ITEMS	CH	ANGE RE	GISTER	AUI	DIT LOG				Viev	V : Save view as	
										T	A Unsaved (Price)	
											Revenue	
						Reve	enue snapsho	t: Current revenu	e forecast 💌	Billed date:	07 Price

oM -	Current billing method	Price lock status	Ŧ	Change			unit "	Original 😑	forecast	Original billing method	Save view Rename current view	•

You can click the pay item column selection icon to choose which fields to include in your view.

Like the view feature in the CBS, you can create, save, rename, and delete views.

2.3 DATA BLOCKS

Each data block is a set of columns grouped together based on categories of information. Using data blocks helps you organize and manage all the columns on a page.

Data blocks are customizable, and you can view them side by side and move them around in the register. The information in each data block displays in a grid like format, maintaining a spreadsheet look and feel.

					CBS		ACS	PAY	TTEMS	CH	IANGE REGISTER	AUDI	T LOG		View	: Forecasts			•

ubtota	ıls 13										\$ 4,650,730.71		8,011.71						

Each type of data block has its own unique default settings such as date range selectors and date preset options (for financial periods). You can choose the total number of columns and panels for each data block.

2.3.1 Resize column width

Data blocks can be customized based on your viewing preferences.. You can resize the columns widths within a data block, so you are able to see all the data within a column.

In the below example, the Tasks Data block contains a column called Description. There are values in the Description column which have the capability of being expanded for better visibility. The shortened descriptions to be expanded are denoted by a '...' after the shortened description name.

Fas	ks		
	CBS position		Ŧ
	4.3	Bolted Con	1006
	3	Concrete	1071
	5.2	Concrete	1086
	2	Earthwork	1069
	5.1	Earthwork	1085
	4.1	Erect Steel	1074
	4.2	Erect Steel	1005

If you want to resize and move the Description column to the right, select the Description column border, and drag it to the right. Stop dragging the column when you're satisfied with the column width.

CBS position	Description	++++ hase ↑ = ode
5.4	Materials	-
1	Job Overhead	1002
4.2	Erect Steel - Light	1005
4.3	Bolted Connections	1000
2	Earthwork	1069
3	Concrete	107
4	Structural Steel	1073
4.1	Erect Steel - Heavy	1074

2.3.2 Data Block Categories

There are three categories of data blocks: Standard, Cost Category and Custom data blocks.

2.3.2.1 Standard Data Block

These include the following default data blocks:

- Task Details
- Actuals
- Current Budget & Estimate
- Forecast
- Forecast Delta

- Live Forecast
- Schedule

You can customize the columns grouped within each of these data blocks.

2.3.2.2 Cost Category Data Block

These data blocks organize key project progress information by cost category, and include the following:

- Cost categories: Actuals
- Cost categories: Current Budget
- Cost categories: Current Estimate
- Cost categories: Forecast

You can change the columns in Cost Category data blocks.

2.3.2.3 Custom Data Block

There are nine types of custom data blocks, each with their own unique characteristics:

Define title and type 2 Choose and custom	ize columns		
* Data block title	Preview		
Title here	Title	here <••>	:
* Data block type			
General			
Forecast			
Live forecast			
Forecast delta			
Actuals			
Schedule			
Revenue			
Cost category			
Tasks			
		Genera	

You have the freedom to choose the type that best meets your needs. You will then select which columns go into the custom data block.

2.3.3 Add a Data Block

The following step by step walks you through adding a standard or cost category data block to the CBS tab of the Workspaces page.

Add a Standard Data Block

1. On the CBS tab of the Workspaces page, click on the **Add data block** button on the right toolbar to open the Data block slide out panel.

2. On the slide out panel on the left, drag and drop the **Cost categories: CB** data block into the register page on the right.

NOTE Each view holds a maximum of five data blocks.

• This will drop the data block at the very far right side and you can then move it via drag and drop in the register

Add data block		asks		1	Task	details	; < •••• >	:	Actuals 6/15/201	18 to 7/2

		Schedule	
		Cost categories : Actuals	
		Cost categories : CB	
		Cost categories : CE	
		Cost categories : Forecast	

2.3.4 Create a Custom Data Block

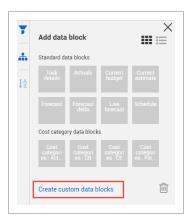

The following steps walk you through creating a custom data block from scratch.

1. On the CBS register page, click on the **Add data block** button, to open the data block slide out panel.

2. At the bottom of the Data Block menu, select **Create custom data blocks**.

- 3. Select Data Block Type: General.
- 4. In the Data block title, enter in [your initials] Training Unit Cost.
- 5. Select Next.
- 6. Using one of the methods above, add the following columns to the data block on the right:
 - Unit Cost (To Date)
 - CE Unit Cost (To Date)
 - Forecast Remaining Unit Cost
 - Forecast Final Unit Cost
 - CE Forecast Unit Cost G/L
- 7. Once your data block is finalized, click **Save** at the bottom right of the slide out panel.
 - NOTE On the Add data blocks slide out panel, you will only see the Custom data blocks you create. Custom data blocks created by other users will only show up under their respective logins.

2.3.5 Forecast Data Block

When you open the Forecasts view, you can select existing individual forecasts or choose to create a new private or shared forecast. This helps to create a more manageable list of personal and shared forecasts.

Ac	ctions	• •								c	\$	щ	D	D	‡≡	۹

2.3.6 Data Block Context Menu

The data block Context Menu allows you to perform different operations specific to the data block you select.

Task details	; < •••• >		
Resource	Forecast (T/O) quantity	UoM	Filter
	1.00	Lump Sum	Save data block as
	10,000.00	СҮ	Remove data block
1	1.00	Each	Hemore and brook
5	10,000.00	CY	0.00

The following table provides an overview of Context Menu options:

	Data Block Context Menu
Title	Description
Choose columns	Open the column chooser menu and move, add, and remove columns from the data block.
Filter	Filter data within a data block.
Save data block as	Create a copy of the existing data block and save it.
Remove data block	Remove the data block from the current view.
Color coded terminal items (Tasks data block only)	Add colors to terminal items of your current data block.
Color-coded CBS position (Tasks data block only)	Adds colors to all CBS lines.
Show/Hide WBS Phase Code (Tasks data block only)	Display or remove the WBS Phase Code column within the Tasks data block.

In the following step by step, you will learn how to modify a custom or an existing data block using the Context Menu.

Edit a Data Block

- 1. In the CBS register, select the **Context Menu** icon of the custom data block you created.
- 2. Select **Choose columns** from the context menu.
- 3. Add a new column to your custom data block.
- 4. Remove a column from your custom data block by selecting the header and clicking the leftfacing arrow to return it to the left column.

CBS > Edit data block						
Define title and type 2 Choose and customize columns						
ALPHABETICAL BY CATEGORY RECENT					Actuals : Pa < ••••	
Search		Actuals	to	m

				• · · · ·		date)
CE cost earned (to date)		uate)				
-	- +	date)				

5. To close the slide out panel, click the **APPLY** button on the bottom right of the slide out.

2.3.7 Filter Data Block Data

You can filter the columns in your data blocks to see relevant information pertaining to your specific needs.

The following Step by Step walks you through filtering data block columns.

Filter Data in a Data Block Column

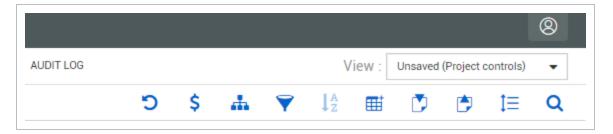

- 1. From any tab, on any column header, select the **yellow arrow** icon.
- 2. Select your desired operator from the first drop-down list.
- 3. Enter the value in the next field.
- 4. Select the next fields for filters logic and additional operator.
- 5. Select **Apply**. The pyramid turns yellow.
- 6. To clear the filter, select the same **column header** and **yellow arrow**.
- 7. Select Clear.

2.4 VIEWSETS

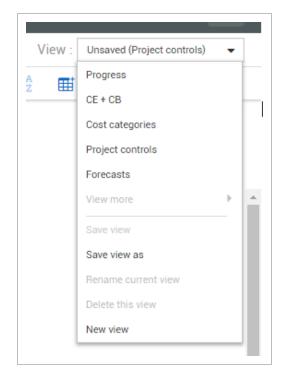

Once you have all desired data blocks organized to your liking, you can create a saved view of your page so that you can always revert to it. This saved view is called a Viewset. The viewset can also be shared with other users.

Create and Save a Viewset

1. From the CBS register page, click on the **View** drop-down arrow.

2. From the Viewset drop-down list, select **Save view as**.

3. Name your view [your initials] – Saved view.

Save view as:	
JP- Saved view	
	Cancel Save

4. Click Save.

2.4.1 Sending Views and Data Blocks

NOTE Certain permissions are needed to send views and data blocks to roles.

You can send views to all users that have a certain role. You can also send it to specific projects or full organizations. To send to a project, you have to be a user on that project or in that organization.

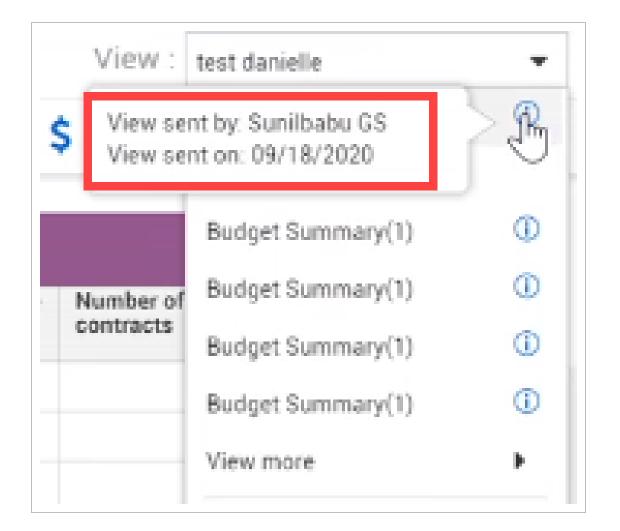

- 1. With the Viewset selected and shown, from the Viewset drop-down list, select **Send view**.
- 2. In the Search for a User field, type an employee's name and select their name from the list.

Users	-
Search for a user	٩
Send to	
Users	
No users selected	Θ
Roles

Projects	5
No projects selected	Θ
Organizations	
No organizations selected	Θ

• To send to a project, you have to be a user on that project or organization. Then select the Send View to drop down list and select the option you want.

Users	•
Users	
Users who have access to the organization	
Roles	
Users who have access to specific role	
Projects	
Users who have access to project	
Organizations	
Users who have access to an organization or subprganizati	on
No projects selected	Θ
Organizations	
No organizations selected	Θ

- 3. Click Send.
- 4. The selected Viewset will send a notification to the selected employee, and will be available in their drop-down list with sender's name and when the Viewset was sent.

NOTE If the user does not have the proper permissions to view all the columns in the view that was sent to them, then the employee will only be able to view the columns for which they have permissions.

2.5 ROW DENSITY

The row density feature allows you to change the spacing between rows within the various pages and slide out panels in Control, allowing you to view your data with the amount of spacing you prefer.

There are three options available:

Relaxed

Tas	ks	:	Task details < •••• >

_									

• Tight

uu	ks		:	Task ueta	ils <••••>	
	CBS position	Ŧ	Description	Resource	(T/O) - quantity	UoM
_	I		Job Overneau		1.00	comp Sum
	^ 2		Earthwork		10,000.00	CY
	2.1		Earthwork Review	1	1.00	Each
	2.2		Earthwork	5	10,000.00	СҮ
	3		Concrete	5	10,000.00	СҮ
	^ 4		Structural Steel		1.000.00	Ton

The Row density icon is available on the CBS, ACS, Pay Items, Change Register, and Audit Log tabs.

When you select the Row density icon, a drop-down menu appears, where you can select the row density (space between rows) you prefer.

Row density	
Relaxed	
Narrow	
Tight	

The row density you select applies to all registers within Control, including all tabs and slide out panels on the Workspaces and Project Library pages.

Row density is user-specific, so different users can apply different row densities within Control, and the row density option you select will remain the next time you log in.

NOTE Row density is independent from the Viewsets you create. The row density you select is therefore not saved as part of your viewsets.

2.6 AUDIT LOG

The **Audit Log** tab within the CBS register is used to capture changes that were made within InEight Control and is broken down into five sub-tabs located on a left sidebar menu. Each log is designed to capture the changes that happened within each of the different registers and during synchronization.

All five audit logs can be accessed by selecting the Audit log tab on the menu bar, then selecting each individual audit log on the far left.

			CBS		AC	S	P	AY ITEMS	C	HANGE REGIS	TER	AUDIT	LOG
Actions 💌													
CBS	Audit ID =	Data type	ltem type =	Desci	WBS	Attrik	Chan	Chan date =	Value befor	Value after	Actua comp	Forec total co	Forec total co
ACS	4871359	CBS	Cost Item	Concrete	1071	Schedule	Michael M	07/23/20	False	True			
Pay items	4871358	CBS	Cost Item	Earthwork	1069	Schedule	Michael M	07/23/20	False	True			
Integration	4871357	CBS	Cost Item	Job Overh	1002	Schedule	Michael M	07/23/20	False	True			
Import history	4871356	CBS	Cost Item	Structural	1073	Scheduled	Michael M	07/23/20	False	True			

2.6.1 CBS

You can access the CBS audit log by selecting CBS from the left side menu.

The **CBS audit Log** captures changes in the CBS register and utilizes an attribute field to identify what type of change was made. Other columns include:

- Changed By (who made the change)
- Change Date (the date and time the change was made)
- The attribute value before and after
- Forecast cost before and after
- Forecast man-hours before and after
- Posting date before and after

CBS	Audit ID =	Data type -	ltem type -	Desci	WBS	Attrit	Chan by -	Chan date -	Value befor	Value after -
ACS	4871359	CBS	Cost Item	Concrete	1071	Schedule	Michael M	07/23/20	False	True
Pay items	4871358	CBS	Cost Item	Earthwork	1069	Schedule	Michael M	07/23/20	False	True
Integration	4871357	CBS	Cost Item	Job Overh	1002	Schedule	Michael M	07/23/20	False	True
Import history	4871356	CBS	Cost Item	Structural	1073	Scheduled	Michael M	07/23/20	False	True

2.6.2 ACS

You can access the ACS Audit Log by selecting ACS from the left side menu.

The **ACS Audit Log** functions similarly to the CBS Audit Log, but contains the changes that were made within the ACS (Account Code Structure) tab. The fields utilized to capture what changes were made are:

- Change attribute
- Changed By (who made the change)
- Changed Date (the date and time the change was made)
- Attribute value before and after

CBS	Audit ID 🤍	Defa type 🤝	hen type 🤍 👻	Description -	AC No. 👻	Attribute 🗸 🗸	Changed by	Changed date 🤟	Value before	Value after
ACS	177	ACS	Account Code	Structural Steel Industrial.	62.03.02.004.02	Primary Auto Quantity	Paul bennion	11/19/2018 12:28 PM	False	True
Pawitema	176	ACS	Account Code	Structural Steel industrial.	62 03 02 004 02	Primary Auto Cuantity	Paul bennion	11/19/2018 12:24 PM	True	False
Paynama	175	ACS	Account Code	Structural Steel industrial	62.03.02.004.06	Primary Quantity	Paul bennion	11/19/2018 12:21 PM	800.00	400.00
Integration	174	ACS	Account Code	Structural Steel Industrial.	62.03.02.004.06	Primary Auto Quantity	Paul bennion	11/19/2018 12:21 PM	True	False
Import history	170	ACS	Account Code	Structural Steel Industrial.	62.03.02.004	Contribute Primary To Pri	Paul bennion	11/19/2018 11:39 AM	False	True

2.6.3 Pay Items

You can access the Pay Item Audit Log by selecting Pay Items from the left side menu.

CBS	Audit ID	Data type	Item type	Description	Pay item No.	Attribute	Changed by	Changed	Value	Value after
ACS	4873330	Pay Item	Pay Item	Pay Item 1	001	Billing Method	Renee Japp	07/26/2019 01:	Cost Plus	Fixed Final Price
Pay items	4872029	Pay Item	Pay Item		1	Pay item tag 8	Renee Japp	07/24/2019 02:		PY 8
Integration	4872028	Pay Item	Pay Item		1	Pay item tag 6	Renee Japp	07/24/2019 02:		PY 6
Import history	4872027	Pay Item	Pay Item		1	Pay item tag 4	Renee Japp	07/24/2019 02:		PY 4

The **Pay Item Log** again functions similarly but contains changes that were made to the pay items. The fields utilized to capture what changes were made are:

- Attribute
- Changed By (who made the change)
- Changed Date (the date and time the change was made)
- Value before and Value after
- Total price before and after

Audit ID	Description	Attribute	Changed by =	Changed date =	Value before	Value after	Total price before
1333638	Testing 07/31	Description	paul trippi	07/31/2019 08:	Test	Testing 07/31	\$1040.0000000.
1333637	Testing 07/31	Sales Order	paul trippi	07/31/2019 08:		S1	\$40.000000000.

2.6.4 Integration

You can access the Integration/Sync Audit Log by selecting Integration from the left side menu.

CBS	Audit ID	Interface	Status	Processing details	Start	Finish	User name	Log Handle
ACS	65639	ActualQty	Succeeded	<u>4 of 4</u>	07/29/2019 03:23 PM	07/29/2019 03:24 PM	pavithra baskaran1	4a2a98f6-eaa6-431b-81f
Pay items	65638	LiveForecast	Succeeded	<u>4 of 4</u>	07/29/2019 03:23 PM	07/29/2019 03:24 PM	pavithra baskaran1	ce90c8df-f916-4a50-847.
Integration	65637	Budget	Succeeded	<u>4 of 4</u>	07/29/2019 03:23 PM	07/29/2019 03:24 PM	pavithra baskaran1	43b8dc1c-6825-413a-9c.
Import history	65636	CBS	Succeeded	<u>4 of 4</u>	07/29/2019 03:23 PM	07/29/2019 03:24 PM	pavithra baskaran1	0985605a-745c-4f27-88

The **Sync Audit Log** is different from the other three. This log is used to capture:

- Whether the syncronization process between InEight Control and the ERP system was completed successfully
- How long the sync process took to complete and who requested the sync

It keeps track of the functions performed under the Actions > Sync menu.

The syncing process will be discussed further in the11.3 Audit Log Integration on page 492.

To help troubleshoot sync issues, you can click the link under the Processing details column to get more information on which steps succeeded, are suspended, or failed.

<u>©</u>	Last updated: 08/29/2018 01:03 PM Use shortcut key F5 to refresh status
Completed details Plan quantities pull: 31570	
Step	Status
Step 1: Recieving data	Complete
Step 2: Populating data	Complete
	Close
© 2018 InEight Inc. Privacy and Terms v18.3	INEIGHT

If a sync error should occur, you can click on the Log Handle link to obtain troubleshooting information.

This brings you into the InEight **Suite App Logs screen**, where you can see information relating to the error including Level, Time, Domain, Area, Exception Message, Exception Type and Correlation Id, which can help you determine the cause of the sync error.

2.6.5 Import history

You can access the Import history audit log by selecting Import history from the left side menu.

The Import history log contains status information for all imports coming into all InEight products. For example, cost item and actuals import processes can both be viewed in the Import history log for status, then you can eventually make corrections and reprocess.

CBS	File name	Status	Processi Details	Total line -	Errors	Total imported =	Added estimate resource	Added pay items	Created	Created	Last edited -	Last edited = date
ACS	Market_St_9_8_17_GMP_Baseline.xer (Mark	😣 Failed	Step 3	1842	0	0	0	0	Renee Japp	07/24/2019 1	Renee Japp	07/24/2019 1
Pay items	Market_St_9_8_17_GMP_Baseline.xer (Mark	😣 Failed	Step 3	1842	0	0	0	0	Renee Japp	07/23/2019 1	Renee Japp	07/23/2019 1.
Integration	Book1.xlsx	<u>▲ Pe</u> ▶⊘		2	2	0	0	0	Renee Japp	07/12/2019 0	paul trippi	07/30/2019 0.
Import history	Market_St_9_8_17_GMP_Baseline.xer (Mark	🖉 Cancelled	Step 5	0	0	0	0	0	Renee Japp	07/10/2019 0	Renee Japp	07/23/2019 1

The Import history audit log allows you to take action on import and sync failures, based on error messages. Error messages are contained within the error file for those imports that have failed import.

You can view progress in sync longs, view error messages, and then resolve issues in effort to continue with your import.

Control – Audit Log

	Section	Description
1	File name	The name of the actual import file being used to import data.
2	Status	The current status of the import file. There are six import status that can define the current state of an import process.
3	Processing Details	This column describes the processing state in which the file is being processed. This column is not applicable for all statuses.
4	Total line items	This is the total line items that are included within the Excel import file.
5	Errors	This is a count of the number of errors during import.
6	Total import	This is the total amount of records that were successfully imported from the Excel import file.

Control — **Audit Log (continued)**

	Section	Description
7	Added estimate resources	This is the total amount of added estimate resources that were added in the CBS.
8	Added pay items	This is the total amount of pay items successfully imported from the Excel import file.
9	Created by	This is user responsible for importing the Excel upload file.
10	Created date	This is the actual date the Excel upload file was imported.
11	Last edited by	This is the last user to edit the Excel upload file.
12	Last edited date	This is the last date the Excel upload file was edited.

File name	Status	Processing Details	items	Errors	Total imported	Added estimate resources	Added pay items 8	Created by	Created date	Last edited by	edited date
NEWPROJ.xer (D	▲ <u>Pend</u> ▶⊘	Step 5	18	0	0	0	0	paul trippi	08/02/2019 12:1	paul trippi	08/02/2019 12:1

NEWPROJ.xer (D	🖉 Cancelled	Step 5	0	0	0	0	0	paul trippi	08/02/2019 12:0	paul trippi	08/02/2019 12:1
NEWPROJ.xer (D	🖉 Cancelled	Step 5	0	0	0	0	0	paul trippi	08/02/2019 12:0	paul trippi	08/02/2019 12:0

If you hover over one of these Status symbols below, it provides you with a brief explanation of the selected status.

Here are some examples:

Database update failed	S Failed C
Import Cancelled 0 of 0 items contains errors User cancelled the import	Cancelled
Import complete Ø Complete Ø42 items imported successfully	

🔺 Pending	▲ <u>Pend</u> ► ⊘
0 of 111 line items contain errors	A Pend DO
Cancel	Complete

There are six possible import statuses listed below.

Import history Statuses

Status	Status Icon	Definition
Failed	S Failed	Import failed due to a duplicate row within the Excel file.
Failed with errors	S Failed wi ↓	Import failed with an attachment to download with further information.
Pending	A Pend. >> Ø	The Excel import file is pending, further action is needed. The double blue arrows will open a new window where you can correct and re- process the Excel import file. The blue circle with the line through it will cancel the import completely.
Cancelled	Cancelled	The Excel import file has been cancelled.
Processing	OPercentry	The Excel import is still processing. Once this is complete, the status will move into one of the other five statuses.
Complete	Complete	Processing of the Excel import files is complete.

2.6.5.1 Pending status

When an import is in a **Pending** status, this means that further action is needed to complete the Excel file import.

There are two options:

Option 1

1. By selecting the double blue errors, you will be taken to another window to continue processing the faulty records.

As an example, in the below screenshot, there are 3 existing errors. If you hover over one of the errors, it will tell you what needs to be corrected.

In this case, there is an issue with the account code assignment, as the pop-up hover suggests.

	Find	previous error 3 err	ors remaini Find r	next error			Cancel Impo		
Status Details (& WBS phase code) Import Columns 🔺									
mport status	CBS match status	Import method	CBS position	Description	WBS phase code	Account code			
Pending	✓ to 1002 [1] [Job Overhead]	Update existing items o	1	Job Overhead	1002	20			
Pending	✓ to 1069 [2] [Earthwork]	Update existing items o	2	Earthwork	1069	51			
lending	✓ to 1071 [3] [Concrete]	Update existing items o	3	Concrete	1071	61			
ending	✓ to 1073 [4] [Structural Steel]	Update existing items o	4	Structural Steel	1073				
ending	✔ to 1074 [4.1] [Erect Steel - H	Update existing items o	4.1	Erect Steel - Heavy	1074	62.03.02.004.06			
ending	✔ to 1005 [4.2] [Erect Steel - Li	Update existing items o	4.2	Erect Steel - Light	1005	62.03.02.004.02			
ending	✔ to 1006 [4.3] [Bolted Connec	Update existing items o	4.3	Bolted Connections	1006	62.03.02.006			
ending	✓ to 1084 [5] [Materials]	Update existing items o	5	Materials	1084	1112233			
rror	✓ to 1085 [5.1] [Earthwork - M	Update existing items o	5.1	Earthwork - Materials	1085	1112234			
ror	✔ to 1086 [5.2] [Concrete - Mat	Update existing items o	5.2	Concrete - Materials	1086	1112235	Value must match an existing account code		
rror	✓ to 1087 [4.4] [Module 01 - Er	Update existing items o	4.4	Module 01 - Erect Steel	1087	1112236			

2. When you double click into one of the 3 errors, it will take you directly into an account code assignment screen where you can make the correction.

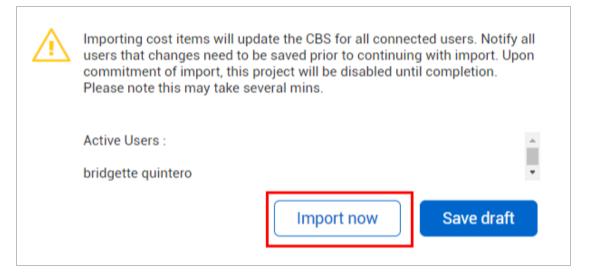

From here you can select an account code and click on Assign.

Search		Q	
Select	Account code	Description	UoM
0	00	Overhead.6233 EDIT	PLS
\bigcirc	00.03	OH - Get Work	MWk
\bigcirc	00.03.02	OH - Estimating	MWk
۲	00.03.02.002	OH - Estimating - Engineering	(Pr MWk
\bigcirc	00.03.02.006	OH - Estimating - Research & C	Qu MWk
\bigcirc	00.03.02.008	OH - Estimating - Prepare Estir	na MWk
\bigcirc	00.03.02.010	OH - Estimating - Review (Pre-	Bid) MWk
\bigcirc	00.03.02.014	OH - Estimating - Post Bid	MWk
\bigcirc	00.03.02.016	OH - Estimating - Managemen	t MWk
\bigcirc	00.03.02.018	OH - Estimating - 2nd Estimate	es MWk

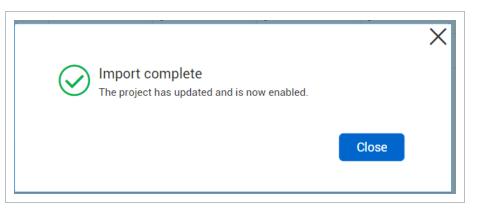

3. After all corrections have been made to the existing errors, you can select the Import button on the top right on the screen.

Find	next error		Cancel Import
	Description	WBS phase code	Account code
	-		
	Job Overhead	1002	20
	Earthwork	1069	51
	Concrete	1071	61
	Structural Steel	1073	

4. A warning message appears stating that changes will be made, and this project will be disabled until completion.

5. Once processing has finished, you will receive an Import complete message.

6. The Import history page now shows that the imported file is now successfully imported and updates the Last edited date.

File name Status	-	Total line items	Errors	Total imported =	Added estimate resources	Added pay items	Created by	Created date	Last edited	Last edited
CBS Import.csv 🛛 📀 Con	plete	11	0	0	0	0	Keith Anderson	06/19/2019 06:30	paul trippi	07/31/2019 10:32

Option 2

1. Selecting cancel, the blue circle with the line through it, will cancel the import completely.

File name	Status	-
CBS Import.csv	1 Pending	₩⊘

2.6.5.2 Failed with errors status

When an import is in a **Failed with errors** status, the system will generate a Word error report. The document displays detected errors while attempting to import the Excel file values. Errors will need to be reviewed within the Word document

An example of the Failed with errors Word **error file** provides direction on how to proceed with correcting the Excel import errors, and a course of action to run the import again

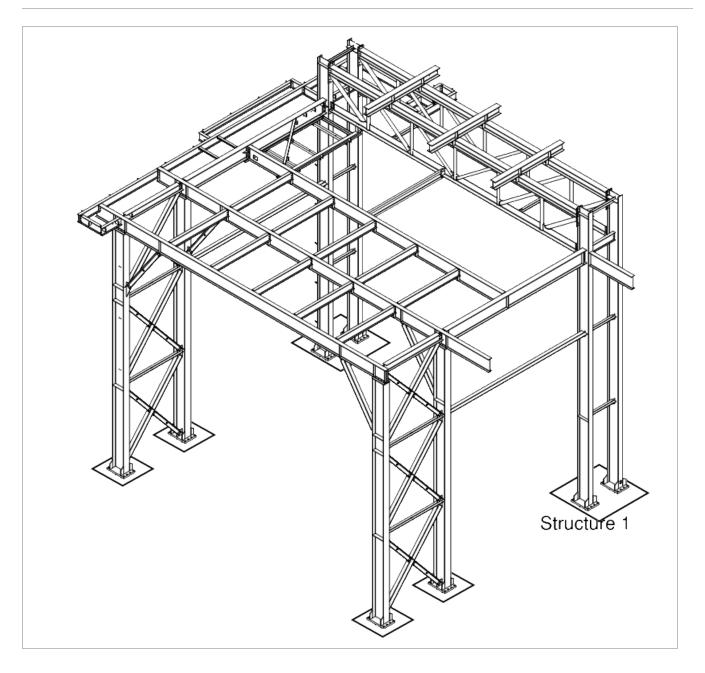

```
Import actuals CBS data: CBS import.xls
File Import attempted on: 7/31/2019 3:45:03 PM
The following errors were detected while attempting to import actual
values into control.
Review the errors below, once all the errors have been resolved,
reattempt the import to Control.
Error 1: Posting date in external system must be valid (this error
affects 10 WBS/CBS items out of 10 total attempted imported WBS/CBS items and 10 rows out of 10 total attempted imported rows)
      WBS: 2904
      CBS: 10
      Row: 7
      WBS: 2905
      CBS: 11
      Row: 8
      WBS: 2906
      CBS: 12
      Row: 9
      WBS: 2907
      CBS: 13
      Row: 10
```

The only option with a Failed with errors status is to review the errors, resolve them within the initial Excel file import, and then re-import the file.

2.7 PROJECT INTRODUCTION

You will be using the project titled "**Steel Structure Training Job**" for the InEight Control training. Within this Control training, you will create cost items and other data that will be utilized in trainings covering the other InEight products (Plan, Progress, etc.)

The project consists of the construction of multiple steel support platforms in a greenfield site. The project scope ranges from site preparations, concrete foundation and footing pours, steel erection, and bolted connections.

Тур	ical all n	nodules				North	ı Area

Review

1. Match each term to its correct definition:

Term	Definition
Home Menu	Select available actions for the current register tab you are viewing.
Actions Menu	Navigate to the CBS, ACS, Pay Items, Change Register and Audit Log register pages.
Tabs	Select what application you want to use (Control, Plan, etc.), as well as other project settings.
Right Toolbar	Contains functions for the register page you are currently viewing.
Second Level Menu	Returns to the Organization or Project home landing page

- 2. Which two of the following are not a data block category?
 - a. Standard
 - b. Unique
 - C. Cost category
 - d. Custom
 - e. Audit
- 3. How are filtered columns in InEight Control indicated in the content register's data blocks?
 - a. Column header is highlighted green
 - b. Column will shade red

- c. Sort/Filter button in column header is yellow
- d. No indication is given
- 4. How do you change the spacing of your rows in Control?
 - a. Select the Row density icon from the right toolbar
 - b. Select Row density from the Actions menu
 - C. Change Row density in the Project settings

Summary

As a result of this lesson, you can:

- Navigate the InEight Control Workspaces page
- Manage data blocks
- Group Pay Items
- Manage columns
- Create viewsets
- Change row density

COST ITEM SETUP

Lesson Duration: 45 minutes

Lesson Objectives

After completing this lesson, you will be able to:

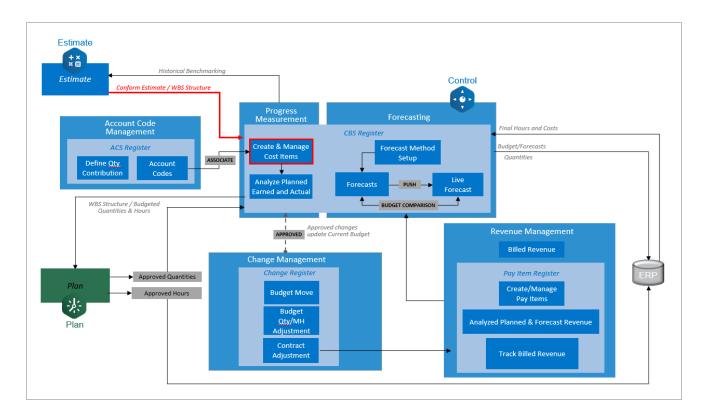

- Explain the Cost Breakdown Structure and its purpose
- Create, arrange and delete cost items
- Import cost items

Lesson Topics

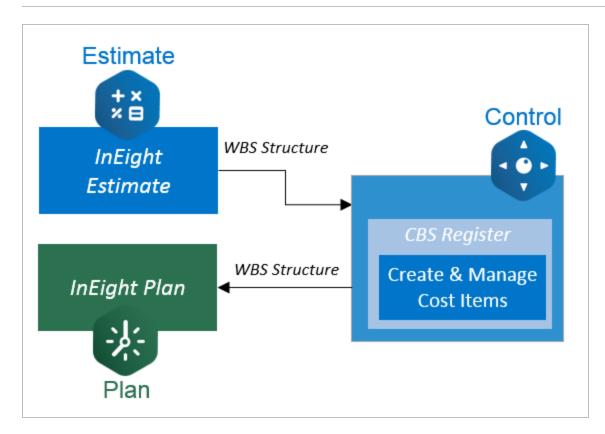

3.1 InEight Control Workflow - Cost Item Setup	83
3.2 Cost Item Overview	. 84
3.2.1 Cost Breakdown Structure	84
3.2.2 CBS Tree	87

3.4.3 Best Practices and Recommendations	
3.4.4 CBS Hierarchy	
3.4.5 Resolving Import Errors	
3.4.6 Excel Import for committed cost	
Review	
Summary	

3.1 INEIGHT CONTROL WORKFLOW - COST ITEM SETUP

InEight Control is the application used to create and manage cost items. The cost breakdown structure developed and maintained in Control is utilized by other InEight applications which inherently share the same data set to eliminate duplicate data entry.

3.2 COST ITEM OVERVIEW

3.2.1 Cost Breakdown Structure

The CBS (Cost Breakdown Structure) is the main tab of the Workspaces page in Control and is the tab where you typically spend most of your time. Each row in the CBS represents a work activity and is called a cost item. In Lesson 2 – General Navigation, you learned how to customize data blocks of the CBS register to only the columns you need to manage your project.

			< CBS		ACS	PAY ITEMS	CHANGE REGIS	> View : P	T view	-
cti	ons	• + 🗹 🤇	\otimes				5	USD 🚮	t∃ t∃	0
	Task	s		:	Task details	< •••• >	:	Cost categorie	s : Actuals	
		⊗ CBS position	Description	WBS phase code	Resource	Forecast (T/O)	UoM	Labor total cost (to date)	Construction equipment total cost (to	Field and main
		1	Job Overhead	1002	16	1.00	Lump Sum	USD \$ 1,958,088.00	USD \$ 1,275,613.00	U
		2	Earthwork	1069	5	10,000.00	СҮ	USD \$ 2,157,313.00	USD \$ 1,057,874.00	US
		3	Concrete	1071	6	10,000.00	СҮ	USD \$ 2,105,378.00	USD \$ 989,283.00	US
		<u>∧</u> 4	Structural Steel	1073		1,000.00	Ton	USD \$ 6,208,007.00	USD \$ 3,543,115.00	US
		4.1	Erect Steel - Heavy	1074	5	800.00	Ton	USD \$ 2,060,138.00	USD \$ 1,089,968.00	US

The CBS is organized in a hierarchy of superior and subordinate cost items. A cost item is superior and/or subordinate based on its relationship to other cost items. This is similar to a parent and a child relationship where an individual can be both a parent and a child at the same time. The CBS is color coded to identify which level of the hierarchy a specific cost item is located.

IS			:	Task details		:	
	CBS position	Description	WBS phase	Resource	(T/O)	UoM

If a cost item has no subordinates it is considered a terminal cost item. Terminal cost items are where cost is tracked. All superior items are a roll up of the budget, manhours, and cost of the cost items below. Terminal items are identified with a special symbol located at the first column of each data block.

CBS position	Description	WBS phase code		WBS phase code		Pay item assignme nt	
1	Job Overhead		1002		1002		
<u>∧ 2</u>	Earthwork		1069		1069

5.2	Concrete - Materials		1086		1086		
5.3	Structure Steel - Materials						

This terminology and associated graphics provide a way to communicate and understand the hierarchy of the Cost Breakdown Structure. The following table provides definitions for each of these terms.

Term	Definition
Superior	Cost item that has subordinate subcost items that roll up under it.
Subordinate	Cost item that is a child to a superior cost item.
Terminal	Cost item that has no subordinate beneath it. Costs and hours are defined at the terminal level.

As accurate as estimators try to build the estimate, changes occur during the project's execution that affect the CBS register in Control. To learn how to maintain, improve, and use the CBS register properly, this topic focuses on the fundamentals of the Cost Breakdown Structure.

3.2.2 CBS Tree

The CBS tree provides a way to navigate up and down your Cost Breakdown Structure and a way to filter down to a subset of the structure.

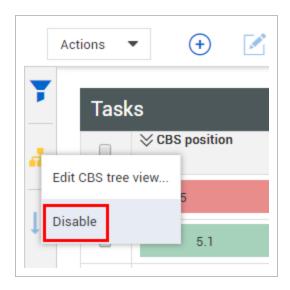

You open the CBS tree slide out panel by clicking on the CBS Tree icon on the Side Toolbar.

Ac	tions	• (+)	ľ	\otimes
•	Task	(S		
-		⊗ CBS position	-	Description
		1		Job Overhead
÷		2		Earthwork
		3		Concrete
↓A		~ 4		Structural Steel

When selected, the CBS tree icon turns yellow and the slide out panel appears.

Ŧ	CBS tree	×
	Expand all Collapse all	
J₽	1 Job Overhead 2 Earthwork 3 Concrete 4 Structural Steel 5 Materials 6 7 Equipment	

- Select Expand all to expand the entire Cost Breakdown Structure
- Select Collapse all to collapse the entire Cost Breakdown Structure
- Click on the arrow icons to expand a cost item to view its subordinates
- Select a cost item and then click Apply to filter your view to that cost item and its subordinates
- To clear the CBS filter, click the CBS tree icon and then click Disable

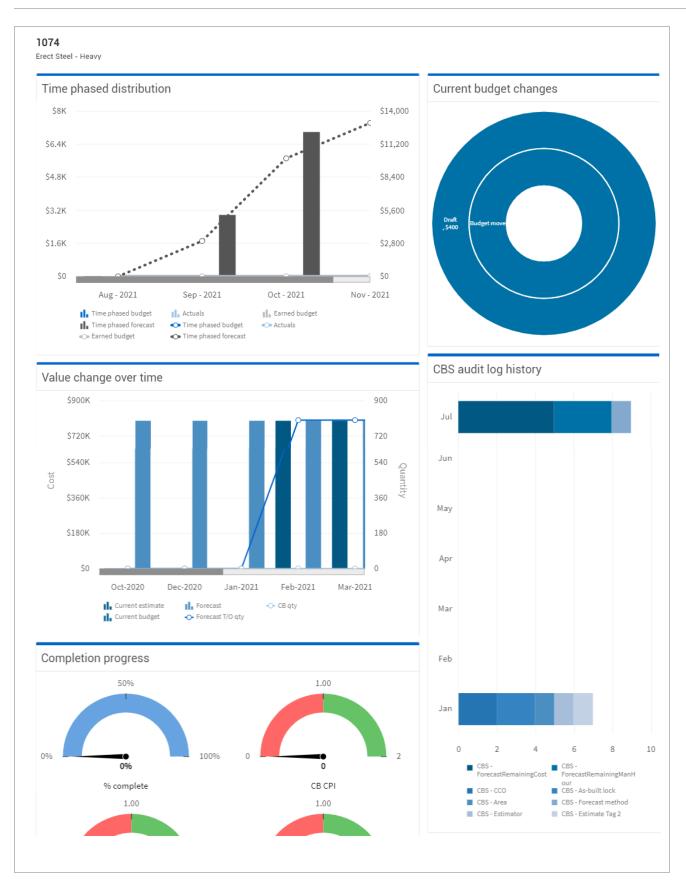

TIP

You can select more than one cost item on the tree to create a customized view.

3.2.3 Cost Item Dashboard

The Cost Item Dashboard slide-out panel shows multiple cost item affiliated graphs. These graphs let you further analyze cost item past and current performance trends related to time-phased distribution, current budget changes, value over time, completion progress indicators, and a CBS audit history log.

You open the Cost Item dashboard slide out panel by right-clicking on a cost item, and then selecting **Cost item dashboard**.

3.3 COST ITEM SETUP

3.3.1 Cost Item Creation

While typically most of your structure imports from your estimating system, you may need to revise the CBS to reflect the way the work will be performed in the field. You may also encounter contract changes or new work. To accommodate these needs, you can add, edit and arrange cost items as needed.

If you need to build additional structure from scratch, you can create new level one cost items as needed. If needed, this would allow you to create an entire new structure from scratch on a blank project, giving you the flexibility to create a complete project structure within Control.

The New cost item window includes a section where you can add multiple cost items. Newly added cost items become positioned at the bottom of the CBS hierarchy. As part of the cost item creation process, you can quickly create multiple cost items and then click Save when you are finished.

						\times
	New cost item					
N	lew cost item		DETAILS	ATTRIBUTES		
e	Add new cost item	Forecast T/O qty	UoM	CE unit cost	CE total cost	•
		1.00	PLS	\$0.00	\$0.00	
		Description	* Forecast T/O qty	* UoM	WBS phase code	
			1.00	PLS -	Generated on Save

		Plug 👻	\$0.00	0.00	0.00	
		CE unit cost	CE MHr/Unit	CE Units/MHrs	CE labor cost/MHrs	-
					Cancel Save	

The following steps walk you through how to create cost items.

Create New Cost Items

- 1. From the project's home page menu, select **Control.**
- 2. Select **Control > Workspaces** on the left side of the Main menu.

	Plug	0.00	0.00	
	CE unit cost		CE labor cost/MHrs	•

9. Click Save.

• Your new cost items are now created in the CBS

Create a New Subordinate Cost Item

- 1. From the project's home page menu, select **Control.**
- 2. Select Workspaces.
- 3. On the CBS tab, scroll down and find a **superior cost item** in the Tasks data block where multiple subordinate cost items exist.
- 4. Right click the **superior cost item** to bring up the options menu.
- 5. Select New Subordinate Cost Item to create a subordinate cost item to your superior cost item.
- 6. Select the Inherit data from parent cost item radio button, then click Yes.
 - This allows you to copy the parent item's information and avoid entering common information a second time.

TIP You can create a new cost item in two ways:

- New Cost Item: This creates a new cost item with the next available number at the current hierarchy level that you selected. Example: If you select 1.6 it creates 1.7 if available.
- New Subordinate Cost Item: This creates a new subordinate cost item with the next number available one level lower than the current level selected. Example: If you selected 1.6, it will create the next 1.6.x where X is the next number available.

3.3.2 Required Cost Items

The Required cost items feature lets you create standardized or commonly used cost items at the organization level, and then add them at the project CBS level. Changing any of the required cost items at the organization level, such as the account code or UOM, also updates the cost items at the project level.

When required cost items are added in Settings > Control > Others > **Required cost items**, the feature provides standardization across all projects for those cost items that are commonly used.

PROJECT TRACKING	FORECAST	ESTIMATE RESOURCES	SCHEDULE	OTHERS				
							Cancel	S
Required	cost items 🥐							
+ 🗹 🛇								
Description	n	WBS phase code	UoM	Account code	Allow as-built

3.3.3 Design Total Qty and Man-hours Columns in CBS

Control displays the sum of the Forecast T/O quantity from the associated InEight Design items against the attributed cost items. You can compare the Design total quantity and Design total man-hours to the Forecast (T/O) quantity and Forecast hours columns, to make sure the values match up with what is in Design.

	and pull applicat	otal qty t T/O qty as determir ed from the Design ion (Quantity item - t TO qty)	ned	Design total MHrs Current estimate man hours as determined and pulled from the Design application (Quantity item - CE MHrs)

\$ 5,760,	886.07	370.00	00		0.651	Rollup				

3.3.4 Create Cost Items in InEight Change

You can also create cost items with resources in Change, and then have them created in Control upon the approval of a contract adjustment. This reduces the amount of extra steps needed for creating cost items in multiple areas.

Creating cost items in Change is performed by first creating an issue with your newly created cost items, then executing your change order.

С	hange management > CCO-Demo 22.2-New scop	e	Executed Change order sent to Control		୩ 4 ⁵⁵ 8 ତ

3.3.5 Cost Item Arrangement

As the project progresses, you may need to rearrange cost items to accommodate project changes.

Move a Cost Item

- 1. On the CBS register tab, highlight the new subordinate cost item you created.
- 2. Right click on the cost item of your choice.
- 3. Click on Adjust CBS position.
- 4. Click and drag your cost item and move it directly under the superior cost item you want it to go under.
- 5. Click Save.
 - Your subordinate cost item should now be moved.

3.3.6 Viewing the CBS Grouped by Column

Navigating throughout the CBS can be difficult and tedious when searching for specific information, as data is spread across the entire CBS. Jobs can contain a lot of various data, and can be difficult to sort through and view the desired information, especially in a list format. The CBS Group by feature allows users to display the CBS in groups of "like" information. This feature allows you to drag and drop columns that you are interested in grouping.

The Group Columns by feature is invoked by selecting the Group Columns icon in the upper the right set of action icons, which opens up a gray bar above the CBS data blocks. Clicking the Group Columns icon a second time disables the feature.

Once you navigate away from the page, the groupings will still exist. Selecting a different view will retain the same groupings as well.

CBS Group by Column

- 1. On the CBS register tab, select the **Group Columns** icon on the right toolbar.
- 2. Drag the **column header** of a column and drop it into the grey bar area.

- 3. Drag and drop a second column header into the grey bar area.
- 4. Your project cost items are now grouped by both columns.

3.3.7 Cost Item Deletion

You can delete one cost item or multiple cost items by selecting the cost items, right clicking, and then selecting **Delete Cost Item**.

When deleting cost items from the CBS, deleting the forecast, clearing out the account code, or changing attributes to delete a cost item is not necessary.

You can also select a cost item and click the **Delete** icon on the left toolbar.

Actions 💌	+	-	\otimes	_
Tasks				
CBS positi		Dee	cription	

NOTE A cost item must meet the following conditions to be deleted:

- Total Cost (To Date) = 0, MH (To Date) = 0, Eqp Hours (To Date) = 0, Qty Complete (To Date)=0
- C B-Total Cost = 0, C B-Total MH = 0, CB-Total Quantity = 0, C B-Qty Remaining = 0
- If the cost item is a parent item, all the subordinate cost items will also need to be checked to see if they can be deleted

If you are deleting multiple cost items and do not meet the following conditions for deletion, a downloadable file appears that lists all of the validations and why they failed.

3.3.8 Copying Cost Items with Resources

You can copy and paste entire cost items with resources from the CBS tab to any cost item you select.

NOTE When you copy a cost item, you cannot copy the current budget because the current budget must be approved in a contract adjustment or budget move.

Follow the step by step to copy a cost item.

Copy and paste cost items

1. From the CBS tab, select one or more cost items that you want to copy that contain a resource.

NOTE This can be checked in the Resources column. If the cost item has a 1 or higher, then a resource is attached to that cost item.

- 2. Right-click your selected cost items.
- 3. Hover over the Copy selection and select **Copy cost item**.

3.4 COST ITEM EXCEL IMPORT

When you need to add multiple cost items to your project, adding them manually can be tedious and time consuming. To save time, if you can export your cost items to Microsoft Excel (e.g., export to Excel from your estimating software), you can import them into Control, allowing you to update your estimate in bulk, without needing to manually enter data into individual cells.

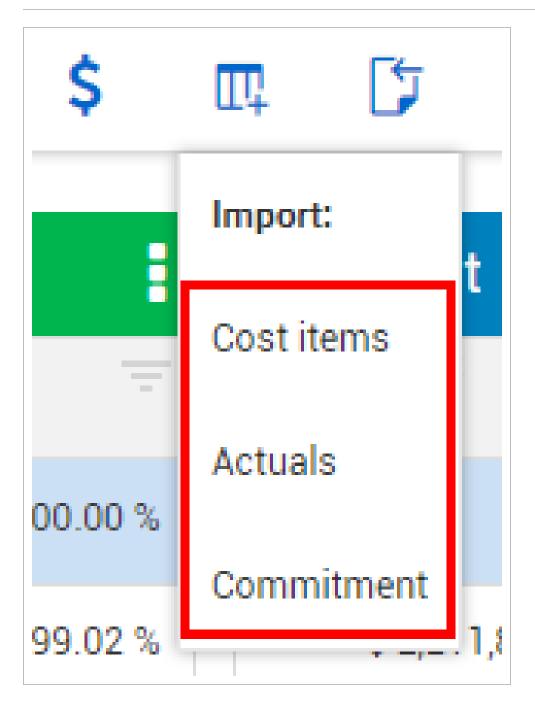

Click the **Import** icon on the right toolbar of the Control > **Workspaces** page to go access the Excel import feature.

The table below indicates the data you can import into Control from Excel.

Data Type	CBS Columns
Tasks	CBS position, Description, UoM, code-related fields, user-defined fields, other settings found in the Task details data block in Control.
Schedule	Schedule ID, schedule dates, Scheduled, Schedule plug days, Plug days, Cost curve, Roll up schedule
Current Estimate	CE final MHrs, final costs, total equipment hours, MHr/Unit, units/MHr, equipment hour/unit, labor cost/MHr, equipment cost/MHr, Secondary Qty, Scales 1, 2, and 3.
Cost Categories	Total and unit costs.

When you click on the **Import** icon on the CBS tab of the Workspaces page, you have three import type options. You can import cost items, actuals, or a schedule.

After you make a selection, the Import CBS data window opens.

Overview – Import CBS Dialog box

Title Description		Description
1	Import from Excel	You can either drag and drop or browse to the file to import. Microsoft Excel files (.xlsx,, .xls) and Comma Separated Value (.csv) files can be

Overview – Import CBS Dialog box (continued)

	Title	Description	
		imported.	
2	Options	You can add new cost items and update cost items that already exist in the project, choose to only update existing cost items, or only add new.	
3	Cost item matching criteria	When adding and updating cost items, the structure in the spreadsheet you are importing from may be in a different order than the structure in Control. By specifying a code for matching your cost items, the import routine will know which cost items in the spreadsheet are new when adding new items, and which cost items to update with data from the spreadsheet when updating cost items.	
4	Information message	This information provides a description of available functionality and instructions for proceeding to the next step.

3.4.1 Forecast Excel Import

When manually importing cost items by either updating existing cost items or importing new cost items, you can also import forecast values via Excel. How the fields are mapped in Excel determines which CBS forecast columns are populated.

Examples of some forecast columns that can be mapped via the Excel CBS import cost item process include, Forecast total cost, Forecast total MHrs, and Forecast total unit cost. Cost categories can also be selected for importing into Control.

3.4.2 Spreadsheet Rules

For the import process to work correctly, the items in your Excel spreadsheet must be formatted in a certain way so that Control can recognize the items. The following table indicates important spreadsheet rules to follow to make sure your data imports successfully.

Attribute	Rules
Import	Reads the first worksheet within the referenced workbook.

Attribute	Rules
function	
First row of data	Considered to be the header row of the data. This imports as titles which are referenced during the mapping process. The import stops reading headers if it encounters a blank header cell.
NumbersNeeds to be the actual number, and not the summation of cells.Values cannot contain the \$ symbol or other currency symbols.	
Second row of data	Considered the first row of data to be imported.

NOTE If you make changes in the spreadsheet, you must save the spreadsheet before importing (only saved data will be imported).

Below is a list of items to be aware of during the population of the import template.

- 1. The Excel file should not be open while simultaneously using the import wizard.
 - a. If there are any edits made to the spreadsheet, it must be saved and closed prior to importing.
- 2. CBS positions cannot be duplicates. They must be unique to each cost item.
 - a. The system will show an error if there are any duplicates.
- 3. The WBS phase codes are not required during the import but must also be unique per cost item.
- 4. Cost categories are spelling and case sensitive, and must match directly to the cost categories spelling.
 - a. The cost categories list can be exported from the import wizard.
- 5. The Excel sheet cannot contain any blank cells during the import. Blank cells show an error and cause the import to stall.
- 6. Make sure any blank columns from an export file are removed before importing again.
- 7. Date formats must match spreadsheet date formats. The Import Wizard will prompt you to chose a date format used in the spreadsheet.
 - a. The Import wizard will prompt you to chose adate format prior to initiating the import.

3.4.3 Best Practices and Recommendations

- 1. Use WBS phase code as the matching criteria for updating existing items.
 - a. WBS phase code are tied 1:1 for each cost item. The CBS position can be changed, but the WBS phase code remains the same regardless of CBS position.
- 2. Set up the views for exporting of data to match the import template created. Views are customizable for flexibility in what is being imported/exported.
- 3. Import template mapping is unique to each individual user. Master mapping cannot be set at a global level. It is recommended to provide users with a step-by-step import mapping document to set up data mapping initially during the on-boarding of InEight.
- 4. When exporting data in Control, current system drops trailing zeros on CBS positions. Example: 1.10 exports as 1.1.
 - a. One way to get around this is opening data as a CSV file in Excel.
- 5. Once you have downloaded the export file, proceed to the following steps.
 - Open blank Excel sheet
 - Navigate to **Data** tab
 - Click Get Data > From File > From Text/CSV
 - Choose downloaded export file
 - Click Import
 - Click Load

Your data will now be imported into the sheet where updates are made. Once you have completed your updates, you may save and re-import the same file.

3.4.4 CBS Hierarchy

If you select CBS position as the matching criteria for the import, the import routine recognizes the hierarchy of your structure by the numbering of the codes.

A2	•	$\times \checkmark f_x$	1.1.1.5
	A	В	с
1	CBS position	Description	Forecast T/O qty
2	1.1.1.5	Parent	1
3	1.1.1.5.1	Child 1	10
4	1.1.1.5.2	Child 2	1
5	1.1.1.5.2.1	Child 2.1	15
6	1.1.1.5.2.2	Child 2.2	20
7	1.1.1.5.3	Child 3	1

After the import is complete, if the CBS position for the new cost items match existing cost items in the CBS, your new CBS cost items will import as you have defined them. The existing CBS cost items will shift down and be relabeled to match the next corresponding number.

When adding new cost items to an existing CBS position, a warning message displays informing you the CBS positions you have picked already exist. The message then asks you to confirm if you would like to continue with this import.

3.4.4.1 CBS Predictive Hierarchy

New cost items created via the import process automatically adjust the CBS structure hierarchy to match your import as needed and predict the movements in the current hierarchy, and the hierarchy that is being added via the Excel import.

Tasks					
	⊗ CBS =	Description	WBS phase		
	✓ 1	A - Road materials	1000		
	➤ 1.1	B - Rock	1001		
	1.1.1	C - Mix	1002		

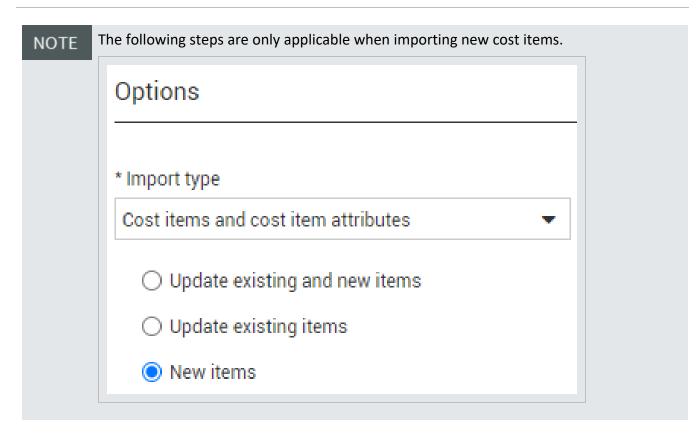

For example, you have three cost items that you want to import, as shown below. Positions 1 and 1.1 already exist in the CBS, and position 2.1.2 is new.

	А	В
1	CBS position	Description
2	1	D - Maintenance
3	1.1	E - Equipment
4	2.1.2	F - Subcontracts

The import process imports Excel CBS positions 1 and 1.1, and places 2.1.2 at the bottom of the hierarchy.

Task	(S		:
	⊗ CBS position =	Description	WBS phase
	∨ 1	D - Maintenance	1003
	1.1	E - Equipment	1004
	∨ 2	A - Road materials	1000
	✓ 2.1	B - Rock	1001
	2.1.1	C - Mix	1002
	2.1.2	F - Subcontracts	1005

The following steps walk you through the import process.

Import CBS Data

1. From the Control > Workspaces page, on the CBS tab, click on the **Import** icon on the right toolbar.

- 2. Select **Cost Items** when the Import CBS data window appears.
- 3. Click on the Browse button to select a file to import.

Import from Excel (.)	xlsx, .xls) or Comma sepa	arated value (.csv)	
	Dr	ag and drop the file here or browse	
		Browse	

- 4. Browse to the Excel file you wish to import.
 - The file and its location should be indicated by your instructor if you're in a classroom setting, otherwise you can select one of your own
- 5. Select the import file and click **Open**.

	\times
You are about to update the CBS structure. Upon commitment of import, this project will be disabled until completion. Please note this may take several mins.	
Import now Save draft	

15. Click Import now.

 A prompt appears informing you that the project is currently locked for the importing process

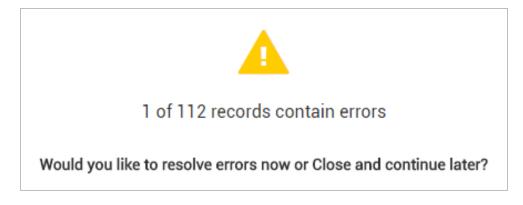

• Once completed, you will receive the following prompt, informing you the data imported successfully

3.4.5 Resolving Import Errors

When conducting the import, you may run into errors. This will be indicated when you attend to run the import routine by the following prompt:

The prompt window includes a Review errors and items for import link, which you can click on to resolve any issues prior to final import. An error resolution page opens where you can identify and resolve your errors.

	Find previous e	rror 1 errors remaini	Find next error		Cancel impo	rt	Import
Status Details (& CBS position) Import Columns 🔺

Pending	No match found, new item	Add new items and upd		Materials			0
Pending	No match found, new item	∆dd new items and und		Fauinment		4	n

NOTE There can be situations where the cost item Excel import process will successfully process some cost items, but fail to import other cost items. In this situation the process will show as failed. For example, you imported 100 cost items, and 90 of the cost items import successfully. There are 10 cost items that did not import successfully. In this scenario you would need to resolve the import errors.

3.4.6 Excel Import for committed cost

Importing committed cost mainly helps to keep track of subcontract cost items where you would have a purchase order that would drive all of your cost.

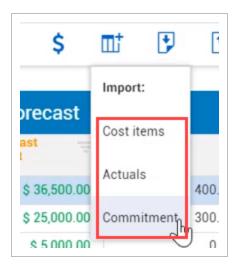

You can import two types of committed cost:

- Open/Remaining Committed Cost
- Total committed cost

Open/Remaining Committed Cost is the cost you still have left to pay on the purchase order. Total committed cost is the total purchase order amount for the purchase order.

Committed cost were previously located in different areas of Control. You can have Open and Total committed cost columns in your CBS. The same columns are also in the Commitments tab of the Actual Details Slideout where you can make manual edits to the committed costs. Columns in CBS for Open and Total committed costs only reflects the manual edits you made in the Actual Details Slideout. Open and Total committed costs are also shown in cost item details slideout cost categories tab.

You can import committed costs using the import icon on the CBS and selecting **Commitment**.

3.4.6.2 Generating the commitment cost Excel spreadsheet

To bring in committed cost from the excel import, you first need an existing value in your CBS that matches the Excel Spreadsheet value. This can be one of two options:

- · WBS phase code
- CBS position

You will also need the **Type** of committed cost you want to import, either Open/Remaining Committed Cost or Total commitment.

E1		• :)	X V.	<i>f</i> x Туре		
	А	В	С	D	E	F
1	WBS phase	e code	Cost	Category	Туре	
2	1003		100	Undefined	Open com	mitment
3	1003		100	Undefined	Total com	nitment
4	1004		450	Undefined labor	Open com	mitment
5	1004		750	Undefined labor	Total com	nitment

NOTE

Open/Remaining Committed Cost and Total commitment types need to be spelled exactly word for word as it is written in the screenshot. If you shorten any of the wording in the Type column, the system will not accept the import and you will receive an error.

Each Type of committed cost has to be its own line item on the Excel spreadsheet. You can do multiple transactions for one cost item, but only one commitment type per line item. if they are different types, you need to separate them out into different line items.

D3		• : >	× 🗸	<i>fx</i> Undefined		
	А	В	С	D	E	F
1	WBS phas	e code	Cost	Category	Туре	
2	1003		100	Undefined	Open com	mitment
3	1003		100	Undefined 다	Total com	nitment
4	1003		100	Undefined labor	Total com	nitment
5	1004		450	Undefined labor	Open com	mitment
6	1004		750	Undefined labor	Total com	nitment

Each column needs to be created and defined if you are to do a Commitment Excel Import. You must include a Cost column and a Category column as shown in the above image.

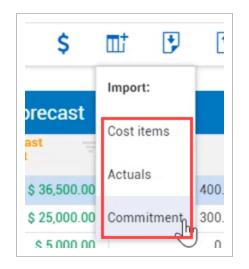

NOTE Open/Remaining Committed Cost should never be greater than your total. Open/Remaining Committed Cost cost should either be equal or less than the Total commitment cost.

3.4.6.3 Importing commitment data

Follow the step by step to Import commitment data.

Import Commitment Costs

1. From Control's CBS tab, select the import icon. Then select **Commitment**.

- 2. After you have created your Excel spreadsheet with your commitment costs, select **Browse** from the Import from Excel window. Then select the Excel file name you saved.
- 3. After you return to the Import commitment data window, under the Options section, select the **Import type** drop down arrow. If it is not already selected, select the **Commitment values** option.

mport type	
Commitment values	•
Select one	
Cost items and cost item attributes	
Actuals values	
Commitment values	

4. Select the Cost item matching criteria drop down and choose either WBS phase code or CBS position.

Cost item matching cr	riteria	
WBS phase code		•
WBS phase code	(here)	
CBS position	2	

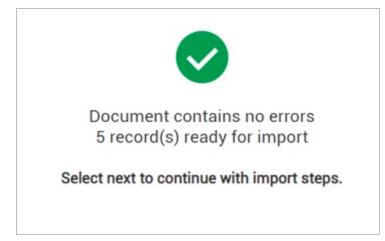

- 5. After selecting the drop down options, select **Next** in the bottom right corner.
- 6. From the Map columns screen, select the columns you are importing from your Excel spreadsheet.

/lap columns			
	Template	Unsaved template	- 8 8 (
Control field		Mapped	File columns
Tasks			
CBS position			only used if matching
WBS phase code		9.	•
Commitments			
* Commitment type			
Cost			Blank-do not import
Cost categories			WBS phase code
			Cost
			Category
			Туре

7. The Control field should match the File columns. For example, Commitment type in Control field should match Type in File columns as shown below. Once done, select **Next**.

	Template	Unsaved template	• 🖹 📓	\times
Control field		Mapped	File columns

* Commitment type		~	Туре	
Cost		~	Cost	
Cost categories		~	Category	
				-
				-

8. If there are no errors in the mapping stage, you should see a green check mark on the next screen, indicating everything is ready to be imported.

If you receive any errors in the mapping stage, you will receive an error with a download option to download a word document that shows you all the errors.

```
Import commitments CBS data: CBSDataBlock - 2020-12-08T121215.813.csv
File Import attempted on: 12/8/2020 9:04:55 PM
The following errors were detected while attempting to import commitment
values into control.
Review the errors below, once all the errors have been resolved,
reattempt the import to Control.
Error 1: Invalid commitment type. (this error affects 2 WBS/CBS items out
of 2 total attempted imported WBS/CBS items and 4 rows out of 4 total
attempted imported rows)
WBS: 1003
CBS: 1.3
Row: 1, 2
WBS: 1004
CBS: 1.4
Row: 3, 4
```

- 9. Click **Next** and then select **Import now**. This will create a line item in the Import history section of the Audit Log tab.
- 10. From Control, go to the Audit Log tab. Then select **Import history**. Hover over the yellow triangle to view the information on the pending import item.

CBS	🔺 Pending		Status	
ACS	0 of 5 line items con Continue Import	0 of 5 line items contain errors Continue Import		
Pay items	O Cancel	Pe ► C		
Integration	CBSDataBloc	Commitment	🗙 Failed 🤳	
Integration	CBSDataBloc	Commitment	🗙 Failed ↓	
Import history	CBSDataBloc	Commitment	Complete	

NOTE After the pending import is Complete, the committed costs populate in the Cost Categories Details tab, as well as the CBS. It the costs also appear in the Commitments tab from the Actuals Details Slideout and populates into the new Open and Total cost committed columns.

If the imported commitment costs fail to import, the Aduit Log Import history would show that the import failed completely.

Review

- 1. Which of the following is how can you identify a terminal cost item on the CBS register page? (Select all that apply.)
 - a. The row is highlighted a different color
 - b. A symbol displays on certain cost item fields
 - C. The row is indented
 - d. The 'Is Terminal' column is checked
- 2. When moving a cost item to be above another cost item at the same level, which icon should display when you drag and drop the cost item?
 - a. The one with a subordinate bar
 - b. The one with three equal bars
 - C. The one with an equal sign
 - d. The one with a plus sign
- 3. If you make changes to your spreadsheet, you must _____ the spreadsheet prior to importing it into Control.
 - a. close
 - b. copy
 - C. save
 - d. refresh

Summary

As a result of this lesson, you can:

- Explain the Cost Breakdown Structure and its purpose
- Create, arrange and delete cost items
- Import cost items

This page intentionally left blank.

COST ITEM MANAGEMENT

Lesson Duration: 30 minutes

Lesson Objectives

After completing this lesson, you will be able to:

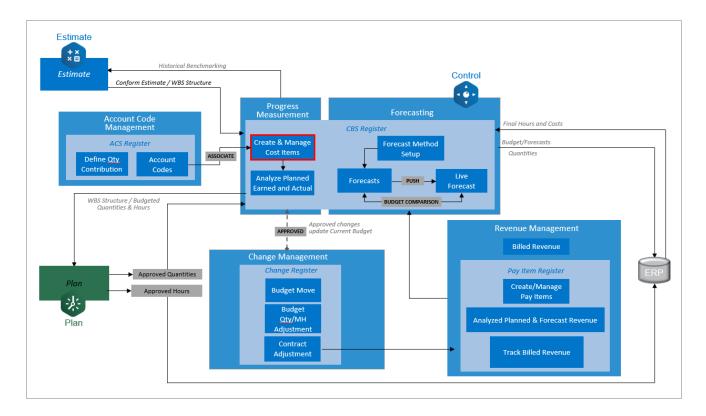

- Manage estimate resources
- Gain visibility into resource billing rates
- Manage cost item details
- Lock the budget

Review	,
Summary)

4.1 INEIGHT CONTROL WORKFLOW - COST ITEM MANAGEMENT

4.2 ESTIMATE RESOURCES

InEight Control refers to labor, equipment, material, installed equipment, and supplies as resources. You will use these resources as the basic building blocks for detailing the estimated costs which creates your budget.

The Project library contains all resources used to estimate costs for the cost items within the CBS.

TIP Most of your CBS cost detail will import directly from InEight Estimate, but you may need to create additional cost item detail for conforming your budget and creating change orders.

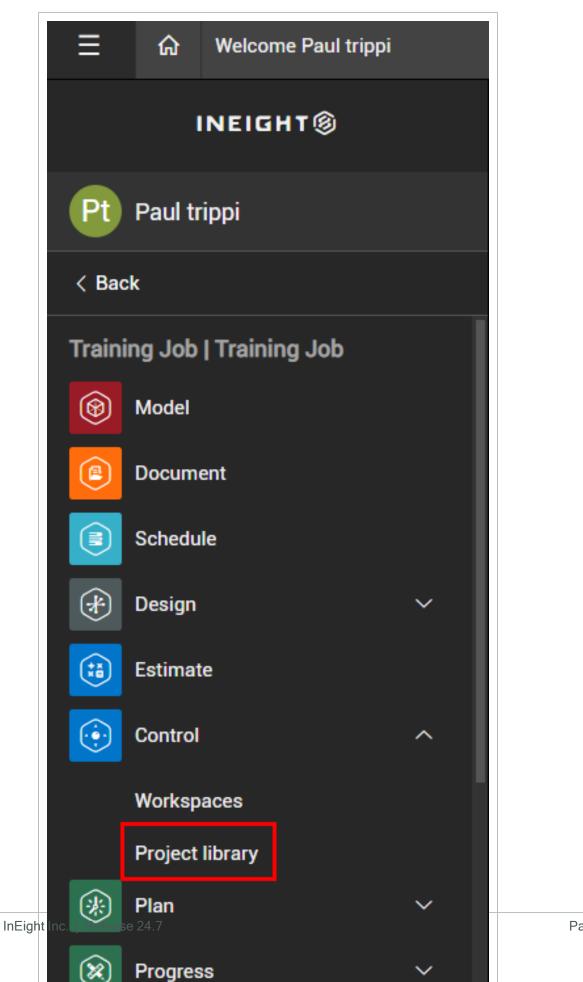

Estimate resources in the Project library are organized into seven resource types:

Resource	Description
Labor	The human resources that do the work, classified by trade (e.g., pipefitters, electricians, iron workers).
Construction Equipment	Owned construction equipment.
Rented Construction Equipment	Construction equipment rented from a third party.
Installed Material	Materials that will remain installed on site after the project is completed, (e.g., concrete, piping, aggregate).
Installed Equipment	Equipment that will remain installed on site after the project is completed, (e.g., boilers, heat exchangers, vessels, cooling towers).
Supplies	Expendable items that will not be permanently installed (e.g., small tools, consumables).
Unique	Resources that are of a "unique" nature and do not fit well into the other types (e.g., dump fees, hauling charges and equipment rented by the month, and subcontracted work).

TIP Estimate resources are the equivalent of the Resource Rate Register in InEight Estimate.

You can access the Estimate resources page from the home page slide-out menu:

1. From Menu > Control > Workspaces > Project Library and then selecting the Estimate Resources tab.

Page 139 of 556

			ESTIMATE RESO	JRCES	REVENUE
\oplus \square \otimes					
Labor	Resource	Description	Default Quanti		Utiliza count
	 LC1	Carpenter Apprentice	1.00	Hour	594.37
Construction equipment	LOT	ourpenter Apprentice	1.00		
Construction equipment	LC2	Carpenter Journeyman	1.00	Hour	1,188.73

2. Another way to access Estimate Resources is from the CBS page. Highlight a **line item** and hovering over the number in the Resource column for that cost item, as shown below.

Actions	•	CBS		ACS

Overview – Estimate Resources

	Resource	Description
1	Resource Type	The seven resource categories for organizing your resources.
2	Resource Code	Alphanumeric label to quickly identify resources.
3	Description	Additional label to provide more resource detail.
4	Default Quantity	The quantity the resource will have by default when it is assigned to a cost item.
5	Unit of Measure	The unit the resource is measured by.
6	Utilization Count	The number of units of that resource being used in the project.
7	C E-Unit Cost (Scale 1)	The resource's rate per unit.
8	Cost Driver	Tells you what drives the cost for that resource when it is assigned to a cost item (cost, quantity, or fixed).
9	Account Code	Code assigned to resources for accounting and benchmarking purposes.

4.2.1 Resource Billable Rates

Within the Resource Rates tab, you can import, modify and add billable rates to estimate resources. This is particularly helpful on time and material or cost plus contracts to drive accurate invoicing.

Resource billing rates are also used for Forecast final revenue, as it will rely on the billing rates of the resources on the cost items that are assigned to pay items. These values generate revenue forecast for cost items that are associated to a cost plus or time & material (billing method) pay item.

Code		* Description Welder I

Billing rate markup %		0.00%	0.00%	0.00%			

Create a Labor Resource

- 1. In the Steel Structure Training Job, select **Menu > Control > Workspaces** and make sure you are on the CBS tab.
- 2. Hover over the number under the Resource column of the Task Details data block for a **subordinate cost item**.
- 3. Select **Resource Library** from the Resource summary window.
- 4. With the Labor resource type selected, click on the **Addestimate resource** icon.
- 5. Fill in the blanks with the following:
 - Code: Lab001-XX (XX your initials)
 - Description: Welder
- 6. Scroll down to Default Quantity and change the value from 0 to 1.
- 7. Select the **Resource Rates** tab.
- 8. Select the Labor cost category and type **50.00** in the Scale 1 unit cost.
- 9. Scroll down to the Resource Rates and enter in values for the following Billing Rates:

- Scale 1
- Scale 2
- Scale 3
- 1. Click Add to add the new resource to the register of estimated resources.

Now that you have created a resource, you will add this resource to the Erect Steel – Heavy cost item in your Project.

Add Resource to Job

- 1. From the Steel Structural Training Job, make sure you are in the CBS.
- 2. Right click on your subordinate cost item.
- 3. Select Cost item details.
- 4. Select the **Resources** tab.
- 5. Select Add estimate resource.
- 6. Click Add.

4.3 COST ITEM DETAILS

The cost item detail slide out panel contains many different fields to edit and enter cost item-related information. To access this screen, select the cost item and right-click to open the menu. Select **Cost item details**. There are four tabs to select from:

- Details tab
- Attributes tab
- Cost Categories tab
- Current Estimate Resources
- Forecast Resources tab

DETAILS	ATTRIBUTES	COST CATEGORIES	CURRENT ESTIMATE RESOURCES	FORECAST RESOURCES

NOTE All editable cells in the cost item detail slide-out panel are single click.

4.3.1 Details Tab

The Details tab contains the values and settings related to the cost detail of the item.

DETAILS	ATTRI	BUTES (COST CATEGORIES	CURRENT ESTIMATE RESOURCES	FORECAST RESOURCES

All	•	001		USD \$	
* Quantity driver					
	•	CBS contri	bute qty	Hide in plan	/Progress

Below is an explanation of some of the key settings on the Details tab.

Term	Function
Cost source	 Indicates how costs are entered on the cost item. Detail - Resources and duration defined to determine costs Plug - Unit and total costs entered at the cost category level
Live Forecast method	Determines the Forecast Method for the cost item. (See <i>Lesson 9 - Forecasting</i> for more Forecast Method details).
Cost segment	 Categorizes whether the cost item is a direct or indirect cost. Direct Cost - costs that directly pertain to the deliverables (pay items) of the job Job Overhead - Overhead costs associated with running and managing the job (e.g., management, jobsite facilities) Business Overhead - Overhead costs associated with running the business (not directly related to running the job) Subcontract - subcontract associated costs
Allow as- built	 Determines whether you can enter actual costs and quantities for a cost item. None - Cost item does not accept cost or quantities. This is typically seen in Superior cost items All - Allows a cost item to accept both direct costs and quantities Quantities - Cost item only accepts quantities Cost - Cost item only accepts costs
Quantity driver	Superior cost item will have the Forecast T/O qty update when the superior cost item (parent cost item) receives an update. The change to the qty will be the original value multiplied by the same multiplier that was applied to the superior cost item. For example: if the superior cost item qty doubles, the item with Superior CI will double as well. Cost items with Fixed as the selection will not be affected by changes to the parent cost item.
Cost item contribute quantity	Checked cost items will have the Forecast T/O qty roll-up to the parent cost item if the UoM on both of the items are the same.
Pay item contribute quantity	Checking this box lets you choose which cost items contribute to the Pay item's forecast (T/O) quantity and can affect earnings rules for the associated pay item. This field is only visible if you have the Enable Pay item Forecast (T/O) quantity

Term	Function
	rollups setting turned on in Settings > Control > Revenue .

4.3.1.1 Pay item contribute quantity

The Pay item contribute qty function works only when the Pay item Forecast (T/O) qty rollups toggle is set to *On* in Settings > Control > **Revenue**. If you have a unit price pay item, its forecast (T/O) quantity is the sum of all the contributing cost items forecast (T/O) quantities.

This function lets you define which cost items roll up their quantities to a pay ite

>>	PROJECT TRACKING	FORECAST	ESTIMATE RESOURCES	SCHEDULE	REVENUE
\bigcirc					
	Unit p Earnings	rice amounts based on:			
(*)(*)	 Forect CE tot 	ast (T/O) qty tal cost

4.3.2 Attributes Tab

The Attributes tab allows you to tag the new cost item with user-defined entries.

- 1. User-Defined Fields free text fields that you can type values into manually
- 2. **Tags** Many of these fields are validated fields (known as tags), meaning you can choose from options in a drop-down list

DET	AILS	ATTRIBUTES	COST CATEGORIES	RESOURCES	
CBS tag 16	•	CBS tag 17	•	CBS tag 18	
CBS tag 19	•	CBS tag 20	•	Hand Place Machine Finish	A
CBS tag 22	·	CBS tag 23	•	Other Shoulder Barrier - Walls	
CBS tag 25	•	CBS user defined 1		Cut Off Pile Splice Pile	•
CBS user defined 3		CBS user defined 4		Clear 888 over defined 5	
CBS user defined 6	-0	CBS user defined 7		CBS user defined 8	
CBS user defined 9		CBS user defined 10		CBS user defined 11	
CBS user defined 12		CBS user defined 13		CBS user defined 14	
CBS user defined 15					

Some of these tags and their drop-down values are defined at the organizational level and others are customizable via the Project Settings under the Configure tag list value.

4.3.3 Cost Categories Tab

The Cost Categories tab allows you to view your current budget, actuals, live forecast and forecast remaining cost, broken down into more detailed cost categories (e.g., labor, construction equipment, supplies, materials, etc.).

The header in the Cost Categories tab shows the **% Complete**, Live forecast method, and the Latest actuals in forecast values.

	DETAILS	ATTRIBUTE	S CC	OST CATEGORIES	RESOURCES

✓ Construction	\$ 0.41477	\$ 0.02304	\$ 0.41477	\$ 0.02304	\$ 0.000
✓ FOM Rented	\$ 0.04148	\$ 0.00230	\$ 0.04148	\$ 0.00230	\$ 0.000
✓ Supplies	\$ 0.00000	(\$ 14,000.00000)	\$ 0.00000	(\$ 14,000.00000)	\$ 0.000
✓ Materials	\$ 0.00000	(\$ 51.40000)	\$ 0.00000	(\$ 51.40000)	\$ 0.000
✓ Subcontract	\$ 0.00000	\$ 0.00000	\$ 0.00000	\$ 0.00000	\$ 0.000
✓ Fees	\$ 99,54376	\$ 5.53021	\$ 99,54376	\$ 5,53021	\$ 0.000

If you have the correct permissions, you can change the Live forecast method. You can also change the view of the Cost Categories values to show either **Total** or **Per Unit** cost.

1004 Permitsss					
	DETAILS	ATTRIBUTE	S C	OST CATEGORIES	
% Complete	* Live forecast method	Latest actuals in values	forecast		
97.7777778%	Committed cost	O 08/21/2020			
	Current budget	т	DTAL PE	RUNIT	
	Current estimate				
Cost category	Average performance	otal cost (to date)	Current estimate	* Live forecast	*
∧ Total	None	\$ 30,565.15556	\$ 100.00000	\$ 31,565.15556	
✓ Labor	Committed cost	\$ 44,111.00000	\$ 0.00000	\$ 45,111.00000	
× Constructio		\$ 0.02304	\$ 0.41477	\$ 0.02304	

This is also where you enter the estimated cost into the different cost categories for the plug cost source.

You can expand the labor category and enter your cost at the appropriate level (e.g., Labor Base wages). You need to enter the cost under the appropriate level of the category. For example, if you

enter the cost at the Labor category level, the cost will appear in Undefined Labor level because you did not enter it at a specific sub-category level.

DETAILS	ATTRIBUTES	COST CATEGORI	ES RESO	URCES		
4.1 - Erect Steel - Heavy

Construction Equipment	\$0.00	\$0.00	\$0.00	\$0.00	\$0.00	

The following Step by Step walks you through adding costs to the Cost Categories tab of the Cost item details slide out panel.

Enter Costs in Cost Categories

- 1. Within the InEight Control main page, on the CBS tab, right click on the cost item you created.
- 2. Select **Cost Item Details** to open the Cost item details slide out panel.
- 3. Click on the **Cost Categories** sub tab.
- 4. Under the Current Estimate column, expand the **Labor** cost category.
- 5. In the Current Estimate column, enter a value in the Current Estimate column for Labor Base, then press the **Tab** key.

4.3.4 Current Estimate Resources tab

The Current Estimate Resources tab is where you can view and manage the CE resources for terminal cost items.

From the Current Estimate Resources tab you can view and manage:

- Cost item details
- Current estimate resources
- Productivity and overall settings

• Resource details

NOTE

When the cost item's cost source is set to **Plug**, you will not use the Current Estimate Resources tab. Instead, costs are "plugged" or entered directly into cost categories on the Cost Categories tab of the cost item.

4.3.4.2 Cost Driver

Each type of resource has a default cost driver. For example, Labor resources are duration driven so their default cost driver is CI Duration, meaning their costs are driven by the duration of the cost item. If you want a resource to only be assigned to a specific cost item or work activity for half the time, you can change its quantity to .5 and it will be driven by half of the cost item's hours.

	DETAILS			ATT	RIBUTES	COST CAT	EGORIES	CURRENT RESO	ESTIMATE JRCES		FORECAST	r resour	CES	
ost ite	em details	s												/
Forecas	st T/O qty		UoM		CE total cost	c	E remaining cost	CBS p	osition		Cost source	e		
200.0	00		Ton		\$ 155,000.00	s	3 155,000.00	4.2			Detail		~	7
urrent	t estimate	e resc	ources											1
urrent (+)	\otimes	e resc			Description		Quantity	HaM		Work		CE unit		1
		e resc	Code		Description	Ŧ	Quantity	UoM		Work hours		CE unit cost		1
+	\otimes	e reso = 1			Description Laborer	Ŧ	Quantity	UoM 2 Each						1
(+)	\otimes		Code			Ŧ					800 200			1

NOTE If you change the Cost Driver to CI Quantity, the fields below will not be editable. It causes the adjusted duration to become zero or read-only. However, it can be editable if it does make a cost impact.

With CI Quantity as your cost driver for your resources, you can adjust the Work Hours manually, where previously that column was read-only. For example, perhaps you want your Laborer to work specifically 80 hours.

orecast	(T/0) Qty	UOM	1	CE Final Cost	WBS Phas	se Code	Cost Source		
700		Ton		\$708,000.00000	1074		Detail	•	
	Row #	Code	Description		Work Hours	CE - Unit Cost	CE - Total Cost	Cost Driver	_ (
	1	L001	General Labor	our	14000	\$50.00	\$700,000.00	CI Duration	ľ
4	2	Lab001	Welder	ach	80	\$100.00	\$8,000.00	CI Quantity	

The Forecast (T/O) Qty is very significant when it comes to quantity driven resources. It determines how the cost is driven and what affects the cost of that specific line item.

For example, perhaps there is a scope change and you need to change the Forecast (T/O) Qty from 700 to 350.

4.1 Er	ect Steel -	Heavy	
Forecast	(T/0) Qty	UOM	l
350		Ton	
	Row #	Code	Description
	1	L001	General Labor
	_		

A screen appears to have you choose whether it will affect the C E-Final Unit Cost or CE-Final Cost. Typically, you will keep the Unit Cost constant and adjust the Final Cost.

C E-Final Cost	
9166.666666665	

Notice your Welder's work hours adjusted from 80 to 40 because they are driven by the Forecast (T/O) Quantity of the cost item.

Forecast	(T/O) Qty	UON	1	CE Final Cost	WBS Phas	e Code	Cost Source			
350.000	000	Ton		\$354,000.00000	1074		Detail	•		
	Row #	Code	Description	ом	Work Hours	CE - Unit Cost	CE - Total Cost	Cost Driver		
					- Hours -	COSI	COSL	Driver	-	
	1	L001	General Labor	our	7000	\$50.00	\$350,000.00	CI Duration		1
	2	Lab001	Welder		40	\$100.00	\$4,000.00	CI Quantity		

If the Cost Driver is set on Fixed, you can only update the resource's hours by typing into the resource itself and updating the work hours directly.

orecast	(T/0) Qty		UOM Ton		CE Final	Cost		WBS Pha	ise Code	Cost Source		
350.000	000		Ton	Ton \$354,000.00000 1				1074		Detail	•	
	Row #		Code	Description		M	Work Hours		CE - Unit Cost	CE - Total Cost	Cost Driver	
		1	L001	General Labor		Jr		7000	\$50.00	\$350,000.00	CI Duratio	
4		2	Lab001	Welder		h		40	\$100.00	\$4,000.00	Fixed	

Many of the numbers are tied to equations under the Productivity resources below. If you edit the numbers, it will have an impact on the resources depending on the cost driver.

4.3.5 Forecast Resources tab

The Forecast Resources tab is where you can view and manage estimate resources assigned to a cost item.

From the Resources tab you can view and manage the:

- Forecast details live forecast method
- Add new resources and adjust duration-driven resources by changing their productivity
- View and adjust resource rates of assigned resources

Resource details					

4.3.5.4 Resource Details

Resource Details shows the unit cost category breakdown of the selected resource listed above. The Resource rates tab expands to a unit breakdown on a selected item under resources. It is fully editable if you have the right permissions to do so.

I.C.05.1.04										
onworker Apprentice										
Cost category	Scale 1 unit cost	Scale 2 unit cost	Scale 3 unit cost							
∧ Total	\$ 45.00	\$ 45.00	\$ 60.00							
✓ Labor	\$ 45.00	\$ 45.00	\$ 60.00							
✓ Construction Equipment	\$ 0.00	\$ 0.00	\$ 0.00							
✓ FOM Rented Equipment	\$ 0.00	\$ 0.00	\$ 0.00							
✓ Supplies	\$ 0.00	\$ 0.00	\$ 0.00							
	\$ 0.00	\$ 0.00	\$ 0.00							

Orphan Indicator

If you change the resource rate of one of the assigned resources, then a triangle will appear. The triangle is an **orphan indicator**. This means a value associated with this resource does not match the resource's value in the Estimated resources in the Project library. When you hover over the triangle, it will give you a summary of all the differences between the library value and the orphaned value.

Attribute	Library value	Orphan value	Last changed by	Last changed on
Fotal - Scale1	50.00	100.00	Susan Cappelloni	09/25/2017 02:24 PM
FOM Rented Equipm	0.00	50.00	Susan Cappelloni	09/25/2017 02:24 PM
Undefined FOM Rent	0.00	50.00	Susan Cappelloni	09/25/2017 02:24 PM

F	Row #	Code	Description		Quantity	UOM		Work Hours	CE - Unit Cost	CE - Tota Cost
2	2	lab1	lab1			1 Each		27.78	60.00	10 🗖
b	3	lab1	lab1			1 Each		41.67	\$60.00	\$1,5
	estimate reso	urce			=					
PRODU			Unit cost ch	large r						
RODU	ICTIVITY		Unit cost ch	-			Scale 2	unit cost	Scale 3 unit co	st
RODU	ICTIVITY			-	ates ale 1 unit cost	70.00	Scale 2	unit cost \$0.00	Scale 3 unit co	ist \$0.00

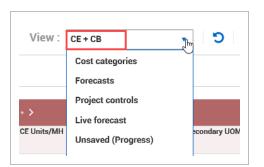

This is shown in case you want to change the values back to match the library. If you change the values back to match the library, the triangle will disappear.

4.3.5.5 Cost Item Man-Hours

Aside from on the Cost Estimate Resources tab, you can also define productivity on the CBS register page. The following steps walk you through how to add the planned man-hours for a cost item from the CBS register page.

Define Cost Item Man-Hours

1. On your CBS register tab, make sure the Current estimate data block is displayed on the page, by selecting the **CE + CB** viewset.

2. Under the CE Final MHrs column, enter **16,000** for a cost item, then press the **Tab** key. Note – If the cost item is a "detail" cost source you will not be able to manually adjust this field.

Actions	•	CBS	ACS	PAY	TITEMS	CHA	NGE REGISTER	AUDIT LOG
Tasks (?	:	Task Details	s <••••>		:	Current estima	te
	CBS Position	Description	Resource	Forecast (TO) Quantity	UOM	Ŧ	CE Final MH	CE Final Cost
	3	Concrete	1	10,000.00	CY		30,000.00	\$1,500,000
	₹4	Structural Steel		1,000.00	Ton		20,000.00	\$1,050,000
	4.1	Erect Steel - Heavy	1	800.00	Ton		16,000.00	\$800,000

4.3.6 Issue tagging in the CBS

You can associate an issue to a cost item in the CBS. Issue Ids in Change have a hierarchy of issues and subordinate issues. Associated an issue to a cost item applies to parent-level issues. Child issues take on the cost item of the parent issue.

Actio	ons .	• 🕂 🗹	\otimes												
I	Task	s					i					Fo	rmula desc iss	ription: [ue: N/A	Docun
1		℅ CBS position	Ŧ	Description	7	WBS phase code	7	nt- =	Last estimated actual man hours reversal	7	Last estimated actual equip hours reversal	Ŧ	Issue	3	Ŧ
		30				1785		0.00	nours reversus		nours reversus				
		31				1790		0.00							
		32		Cost item 1 up				0.00							
		33		Cost item 2				0.00							
		34		x				0.00							
		35		Detail - labor				0.00							
		36		Detail - CE				100.00							
		37		Detail - other				0.00							
		38		Detail - mix				10.00							
		39		Plug				0.00							
		40		plug2				0.00							
		41		Cost item 1		01		0.00							
		42		Cost item 2		02		0.00							
		43		Cost item 3		03		1.00	04/06/2021 1:18:1.		03/29/2021 3:08	.7			
		44		Cost item 4		04		0.00							
		45						0.00							

When you click in the Issue column, the Assign issue dialog box is shown. The list of issues originates from the list of the issues in Change.

Search			
Select	Issue	Issue name	
0	7	new5_copy67	-
0	8	new5	-

NOTE The Assign issue dialog box does not contain the full list of Issues that Change contains.

				NEW ISSUE	7 ISSUE LOG	POTENTIAL CO LOG
(\cdot)	→ Å	jej (f)				
	Issue ID 📘 👘	PCO ID	Client CO ID	Issue name 🛒	Issue start date 👘	Issue stat 🛒 Assi
	^ <u>12</u>			G Testing 2/1	02/17/2021	Open
	12.2			G Testing 2/1	02/17/2021	New
	12.1			G Testing 2/1	02/17/2021	New
	11 B			new6 (B)	11/05/2020	New
	<u>11 A</u>			new6 (Original)	11/05/2020	New
	^ <u>10</u>			new6	11/05/2020	Open
	10.1			new6	11/05/2020	New
	9_		new1	new5cj	11/04/2020	Executed 🕢
	~ 8			new5	11/04/2020	Open

If a parent issue in Change becomes a subordinate while you already have that issue assigned to a cost item in the CBS, the cost item then changes Issue ID to match the parent item that the linked issue was then relocated under. For example, if the parent issue ID was a 2 in Change and it was moved under the parent issue ID 1, then the cost item previously linked to the parent 2 changes to the parent issue 1.

4.4 LOCK BUDGET

4.4.1 Budgets vs Estimate

You can maintain an Original Budget, a Current Budget, and a Current Estimate, as is shown from the CBS tab of the Control main page, using a custom data block.

Tas	sks	:		Fask De	t < ••••	· >	BM Budget View		
	CBS Position	Description	F	VBS Thase = Code	Foreca st TO Oty	UOM	O B-Total Cost	C B-Total Cost	C E-Final Cost
	1	Job Overhead		1002	1.00	Lump Su.	\$250,000.00	\$250,000.00	\$250,000.00
	2	Earthwork		1069	10,000.0	CY	\$400,000.00	\$400,001.00	\$400,000.00
	.▼3	Concrete		1071	10,000.0	СҮ	\$0.00	\$8,000.00	\$5,000.00

	3.1.1	Place/Strip Footing Forms		1090	500.00	SF	\$0.00	\$8,000.00	\$5,000.00
	3.1.2	Pour Footings		1091	0.00	СУ	\$0.00	\$0.00	\$0.00

4.4.1.1 Original Budget

The Original Budget (OB) is a snapshot of the project plan in its original state, prior to execution. It is a baseline used for comparison as the project progresses. You cannot edit your Original Budget values; they are read-only in the CBS register, available for reference only.

Once set, the Original Budget never changes.

In the CBS register, you can find the OB values for man-hours, quantities, and costs.

Tas	sks		Task De	t <••••	> I	BN	BM Budget View <+>						
	CBS Position	Description	WBS Phase = Code	Foreca st TO Qty	UOM	0 B	tal Cost Descr. Original Budget Total Cost Formula: N/A	Ŧ	C B-Total Cost	C E-Final Cost			
	1	Job Overhead	1002	1.00	Lump Su.		\$250,00	0.00	\$250,000.00	\$250,000.00			
	2	Earthwork	1069	10,000.0	CY		\$400,00	0.00	\$400,001.00	\$400,000.00			
	.▼3	Concrete	1071	10,000.0	CY		8	0.00	\$8,000.00	\$5,000.00			
	▼3.1	Concrete Footings	1089	1,000.00	CY		8	0.00	\$8,000.00	\$5,000.00			

4.4.1.2 Current Budget

The **Current Budget (CB)** is the project's operational budget, including only project changes approved through a controlled process. The Current Budget is therefore the sum of your Original Budget, plus or minus any approved changes.

See the Change Management section for more details on managing and approving budget changes.

In the CBS register, you can find CB values for planned, earned and forecasted costs, hours and productivity.

TIP

Tas	sks			Task De	:t < ••••		BM Budget View		<·>		
	CBS Position	Description		WBS Phase - Code	Foreca st TO Oty	UOM	O B-Total Cost	C B-Total Cost	Descr: Current Budget Total Cost Formula: N/A	Ŧ	C E-Final Cost

	3.1.2	Pour Footings		1091	0.00	СУ	\$0.00		\$0	1.00	\$0.0

4.4.1.3 Current Estimate

The **Current Estimate (CE)** represents the most up to date estimate of your work. You can update your Current Estimate quantities, hours, and costs at any time in the CBS register, with no required approval process or work flow.

You can use the Current Estimate as a sand box to build out change orders and do what-if analysis to plan for potential changes, without worrying about affecting the Current or Original Budgets.

Tas	sks	:		Task De	:t < ••••	·>	BM Budget View		
	CBS Position =	Description	1	WBS Phase - Code	Foreca st TO Qty	MOM	O B-Total Cost	C B-Total Cost	C E-Final Cost Estimate Final Cost Formula: N/A
	1	Job Overhead	I	1002	1.00	Lump Su.	\$250,000.00	\$250,000.00	\$250,000.01

	3.1.2	Pour Footings	1	1091	0.00	CY	\$0.00	\$0.00	\$0.01

NOTE All editable cells in the Current Estimate CBS grid are single click.

4.4.2 Lock Budget and Price

When you first create your project, your cost breakdown structure is unlocked, meaning you can make changes to your current estimate, but there is no locked down budget for tracking purposes. Your Original Budget and Current Budget data blocks therefore contains no values.

	1	Job Overhead	0.00	\$ 250,000.00								
	2	Earthwork	1.25	\$ 40.00								
	3	Concrete	0.33	\$ 150.00								

Locking your budget creates an Original and Current Budget based on your Current Estimate values. Keep in mind that:

- Your Original Budget cannot change
- Your Current Budget can only change via approved change orders (see *Lesson 7 Change Management*)
- During project execution, you can compare your actual costs and man-hours to your Original and Current Budgets to track you progress

In the CBS you can lock the budget by selecting Actions > Lock/unlock budget > Lock Budget or Lock project budget and price.

		CBS	₽ /	ACS	PAY	ITEMS	CI	HANGE REGISTER	AUD	IT LOG		View	: Forecasts	
Actions 🔻 🕂 🗹	8								່ວ \$		T 1	A Z	1 🗗	•

001	Earthwork - Lab	1.00	6
002	Concrete - Lab	1.00	
003	Steel - Labor &	1.00	

4.4.3 Unlock Budget and Price

After you lock your budget, in rare instances, it might be necessary to unlock your Original and Current Budgets, though this is typically not recommended. For example, after initial import of your estimate into Control, you might need to make further adjustments to your cost breakdown structure to conform your estimate to the working plan for the project. Normally, unlocking your budget is the exception, not the rule.

Actions 🔻 🕀 🗹	8	
Global forecast method		
Set forecast method	ription	WBS code
Time phased forecasting	worhead	1002
Claim multiple CBS quantities Budget move and contract adjustment	work rete	1069 1071
Lock/unlock budget	Lock budget	73
Sync 🕨	Unlock budget	74 05
Reverse estimated actuals	Lock project budget and price	06 84
51 Ear	thwork - Materials	1085

In Pay Items, like locking the budget for cost items, you unlock the price from the Actions menu.

Review

- 1. When you first import or create your cost breakdown structure, by default your budget is:
 - a. Locked
 - b. Unlocked
 - C. Suspended
 - d. Auto-filled
- 2. Under the Cost Details tab, what are the three types of cost segments that you can choose from?
 - a. Direct Cost, Job Overhead, Business Overhead
 - b. Detail, Plug, Quote
 - C. Superior, Subordinate, Terminal
 - d. Fixed, Superior Cl
- 3. The Resources tab is where you can:
 - a. Adjust the unit rate of your project's resources
 - b. Adjust Man-Hours
 - C. Adjust and add equipment costs
 - d. All of the above
 - e. None of the above

Summary

As a result of this lesson, you can:

- Manage estimate resources
- Gain visibility into resource billing rates
- · Manage cost item details
- Lock the budget

This page intentionally left blank.

PROGRESS MEASUREMENT

Lesson Duration: 60 minutes

Lesson Objectives

After completing this lesson, you will be able to:

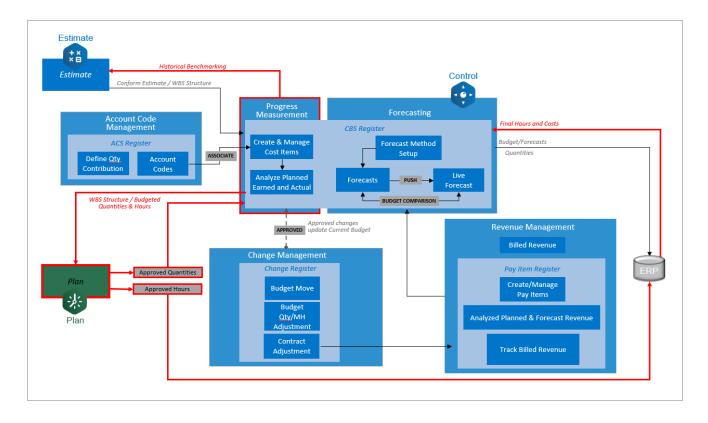

- Define the measurements for analyzing the progress of a project
- Set up a Date Range for progress data
- Get Plan quantities, actual costs, and actual man-hours using the Sync feature
- Explain the settings used for managing progress data shared between applications
- Add and adjust actuals manually
- View actuals history

Lesson Topics

5.1 InEight Control Workflow - Progress Measurement	77
5.2 Progress Measurement Overview	77
5.2.1 Budgets vs Estimate	77

Exercise 5.1 – Progress Measurement	
Review	228
Summary	

5.1 INEIGHT CONTROL WORKFLOW - PROGRESS MEASUREMENT

5.2 PROGRESS MEASUREMENT OVERVIEW

One of the standard forms of contract payment terms in the construction industry is based on the value of specific contract deliverables. It is also based on the work completed during the previous month towards those pay items. Throughout the life of a project, you will want to track the progress of work completed.

It is important to identify and define a few key terms related to progress measuring, and to identify how to utilize InEight Control as a tool for accessing and maintaining critical job factors.

5.2.1 Budgets vs Estimate

Within InEight Control, you can maintain an Original Budget, a Current Budget, and a Current Estimate, as is shown from the CBS tab of the Control main page by using a custom data block.

Tasks			I	Task De	t < ••••	· >	BM Budget View			
	CBS Position	Description	F	VBS Phase = Code	Foreca st TO Oty	UOM =	O B-Total Cost	Ŧ	C B-Total Cost	C E-Final Cost

	2	Earthwork	I	1069	10,000.0	CY	\$400	,000.00	\$400,001.00	\$400,000.00
	▼3	Concrete		1071	10,000.0	СУ		\$0.00	\$8,000.00	\$5,000.00
	▼3.1	Concrete Footings		1089	1,000.00	CY		\$0.00	\$8,000.00	\$5,000.00
	3.1.1	Place/Strip Footing Forms	l	1090	500.00	SF	l	\$0.00	\$8,000.00	\$5,000.00
	3.1.2	Pour Footings		1091	0.00	СУ		\$0.00	\$0.00	\$0.00

5.2.1.1 Original Budget

The **Original Budget (OB)** is a snapshot of the project plan in its original state, prior to execution. It is a baseline used for comparison as the project progresses. You cannot edit your Original Budget values; they are read-only in the CBS register, available for reference only.

Once set, the Original Budget never changes.

Within the CBS register of InEight Control, you will find the Original Budget (OB) values for man-hours, quantities, and costs.

Tasks			isks Task Det < ••••• >				BM Bu	BM Budget View < • >			
	CBS Position	Description		WBS Phase = Code	Foreca st TO Qty	UOM	0 B-Total	Cost Descr: Original Budget Total Cost Formula: N/A	Ŧ	C B-Total Cost	C E-Final Cost
	1	Job Overhead		1002	1.00	Lump Su.	1	\$250,00	.00	\$250,000.00	\$250,000.00
	2	Earthwork		1069	10,000.0	CY	l	\$400,000	.00	\$400,001.00	\$400,000.00
	₩3	Concrete		1071	10,000.0	CY		81	.00	\$8,000.00	\$5,000.00
	▼3.1	Concrete Footings		1089	1,000.00	CY		si	.00	\$8,000.00	\$5.000.00

5.2.1.2 Current Budget

The **Current Budget (CB)** is the project's operational budget, including only project changes approved through a controlled process. The Current Budget is therefore the sum of your Original Budget, plus or minus any approved changes.

TIP See the Change Management lesson for more details on managing and approving budget changes.

Within the CBS register of InEight Control, you will find Current Budget (CB) values for planned, earned and forecasted costs, hours and productivity.

Ta	sks		 Task De	t < ••••	> I	BM Budget View		<·>		
	CBS Position	Description	WBS Phase - Code	Foreca st TO Oty	UOM =	O B-Total Cost	C B-Total Cost	Descr: Current Budget Total Cost Formula: N/A	Ŧ	C E-Final Cost
	1	Job Overhead	1002	1.00	Lump Su.	\$250,000.00		\$250,000	.00	\$250,000.0
	2	Earthwork	1069	10,000.0	CY	\$400,000.00		\$400,001	.00	\$400,000.0
	▼3	Concrete	1071	10,000.0	CY	\$0.00		\$8,000	.00	\$5,000.0
	▼3.1	Concrete Footings	1089	1,000.00	CY	\$0.00		\$8,000	.00	\$5,000.0
	3.1.1	Place/Strip Footing Forms	1090	500.00	SF	\$0.00		\$8,000	.00	\$5,000.0
	3.1.2	Pour Footings	1091	0.00	CY	\$0.00		ŝ	.00	\$0.0

Forecast (T/O) - CB qty delta column

The Forecast (T/O) - CB qty delta column shows you the difference between the Forecast (T/O) quantity and the current budget total quantity columns.

The calculation for this formula is [Forecast (T/O) qty] - [CB total qty].

				CBS	Ą	CS
	Actions	• (+)	ľ	\otimes		
•	Tas	ks			:	Current estimat
<u> </u>		⊗ CBS position	Ŧ	Description	WBS phase	Forecast (T/O) - CB qty delta
_		3.4.2.2.1		STS - Direct MHR	1056	522.0
.		3.5.2.3		SC Xaxlip Traffic Control Su	1071	466.0
↓ ⁹		3.5.1.5		PM Soil Anchors	1067	101.5
		3.4.1.2.2		Drill / Install / Grout Anchors	1014	101.5
		3.4.1.2.3		Build & Move Anchors	1015	101.5

You can filter on non-zero CBS records, which makes you aware to update either the Forecast T/O Quantity or CB Total Quantity.

Forecast (T/O) - CB qty delta	F O Forecast O Fore method total co
751,86	Show items with value that:
52	Greater than 👻
46	0
10	AND
10	Equal
10	
10	Clear Apply
	-

5.2.1.3 Current Estimate

The **Current Estimate (CE)** represents the most up to date estimate of your work. You can update your Current Estimate quantities, hours, and costs at any time in the CBS register, with no required approval process or work flow.

You can use the Current Estimate as a "sand box" to build out change orders and do what-if analysis to plan for potential changes, without worrying about affecting the Current or Original Budgets.

Tasks Task Det < ••••• >						· > •	BM Budget View		<·>	
	CBS Position	Description	F	NBS Phase	Foreca st TO Oty	UOM	0 B-Total Cost	Ŧ	C B-Total Cost	C E-Final Cost Estimate Final Cost Formula: N/A
	1	Job Overhead		1002	1.00	Lump Su.		\$250,000.00	\$250,000.00	\$250,000.00
	2	Earthwork		1069	10,000.0	CY		\$400,000.00	\$400,001.00	\$400,000.00
	▼3	Concrete		1071	10,000.0	CY		\$0.00	\$8,000.00	\$5,000.00
	▼3.1	Concrete Footings		1089	1,000.00	CY		\$0.00	\$8,000.00	\$5,000.00
	3.1.1	Place/Strip Footing Forms		1090	500.00	SF		\$0.00	\$8,000.00	\$5,000.00
	3.1.2	Pour Footings		1091	0.00	СУ	1	\$0.00	\$0.00	\$0.0

Within the CBS register of InEight Control, you will find a wealth of columns for measuring and analyzing your project progress. InEight Control uses its own terminology for these measurements that match up well with common Earned Value Management terminology. Before comparing these terms, the following section reviews some Earned Value Management basics.

5.2.1.4 Updating Forecast (T/O) Quantity

The different ways to update the Forecast (T/O) quantity include:

- 1. Direct entry into data block.
- 2. Direct entry into Cost item details slideout.
- 3. Excel import.
- 4. Undo.
- 5. Copy/paste into data block.
- 6. Rolldown from assigned pay item (need to have this setting enabled).
- 7. Cost item API.
- 8. Selective import.
- 9. Rolldown from parent (Qty driver is Superior CI).
- 10. Rollup from children (Contribute qty is checked).

Updating CE unit cost for CE total cost

When you update the Forecast (T/O) on both the CE and the Forecast, you are prompted to update either the CE unit cost for CE total cost. You can also choose to update either the CE labor cost/Mhr or CE total MHrs, and either CE construction equipment cost/hr or CE total equipment hrs (if applicable).

This will then update the Forecast values because Forecast is based off Remaining qty * selected unit cost, and your Remaining qty will update with a Forecast (T/O) qty change. This also affects your % complete (Qty claimed / Forecast (T/O) qty) which impacts all the earned value columns. It will also update the Forecasted revenue values as well (based on the % complete).

Ensuring Total Quantity alignment between Control and Plan

You can easily filter the Forecast (T/O) - Plan component qty delta column. There is also a menu option in the Actions menu to update the Forecast (T/O) qty to match the Plan qty - Update Forecast (T/O) qty with Plan component total qty

5.2.2 Planned Value (PV)

Planned Value (PV) are the costs and hours you have estimated and scheduled for the project. Think of PV as your approved budget of scheduled items. In Control, your PV includes the following columns:

- CE Total Cost
- CE Total MHrs
- CB Total Cost
- CB Total MHrs

Actuals 11/17/20	018 to 08/07/2023 🕻	1	
CE total cost 🚽	CE total MHrs	CB total cost	CB total MHrs
\$ 0.00	0.00	\$ 0.00	0.00
\$ 2,474,580.57	8,370.48	\$ 2,780,589.58	8,088.50
\$ 0.00	0.00	\$ 0.00	0.00
\$ 52,449.00	0.00	\$ 52,449.00	0.00

5.2.3 Earned Value (EV)

Earned Value (EV) Measures the amount of money you merit in return for the work performed up to that point. You can use EV to measure how much of your planned costs and hours you *should* have spent so far, according to the percent of work completed. It uses the below formula to calculate this:

Planned Value x % of work completed = Earned Value

In InEight Control, your EV includes the following columns:

- CE cost earned
- CE MHrs earned
- CB cost earned
- CB MHrs earned

CBS	PAY Current estimat	ITEMS	CHANGE REGISTEP	CB MHrs of Current be earned Formula	earned udget man hours ete] × [CB total MHr:	s]
Forecast (T/O) =	CE cost earned	CE MHrs earned	CB cost earned	- CB earr	MHrs -	CE total
1.00	\$ 0.00	0.00	\$0	.00	0.00	
1.00 PL	\$ 2,469,579.10	8,370.48	\$ 2,766,947	.48	8,088.50	
1.00	\$ 0.00	0.00	\$0	.00	0.00	

5.2.4 Schedule Performance Index

Schedule performance index (SPI) measures how close the work is being completed according to the designated schedule. It is Earned value/Planned value, and is calculated as earned current budget cost/CB planned value (to date)

CE	BS	ACS	P	AY ITEMS
Task d	etails		••• >	
SPI	-	CB planned value (to date)	Forecast (T/O)	UoM
	0.00	\$ 250,000.00	1.00	Lump Sum
	0.80	\$ 40.00	10,000.00	CY
	3.00	\$ 150.00	10,000.00	CY
	5.00	\$ 1,516.28	1,000.00	Ton
	0.00	\$ 25,666.00	800.00	Ton
	20.00	\$ 1,000.00	200.00	Ton
	0.50	\$ 24.98	2,000.00	Ea
	0.00	\$ 1,750,000.00	1.00	Each
	0.00	\$ 25.00	10,000.00	CY
	0.00	\$ 100.00	10,000.00	CY
	0.00	\$ 500.00	1,000.00	Ton
	0.00	\$ 0.00	1.00	PLS

The SPI calculation uses the time phased budget values as planned values. To accommodate the time phased budget values, the planned value includes the cumulative time phased budget planned value to date.

5.2.5 Actual Cost (AC)

Actual Cost (AC) refers to the costs you incur when you perform the work.

In InEight Control, AC is known as Total Cost (To Date). In addition, InEight Control refers to actual man-hours as MH (To Date).

Tas	ks			'ask De	t < ••••	>	Actuals 4/25/201	7 to 4/25/2017 🎬				
	CBS Position	Description	P	/BS hase = ode	Foreca st TO Oty	UOM	Qty Complete (To = Date)	MH/Unit (To 👘	C B-MH G/L (To = Date)	Total Cost (To Date)	Descr: Total Cost (To Date) Formula: N/A	% Complete
	1	Job Overhead		1002	1.00	Lump Su.	0.00	0.00	0.00	\$0.00	\$0.00	0.00 %
	2	Earthwork		1069	10,000.0	CY	0.00	0.00	0.00	\$0.00	\$0.00	0.00 %
	▼3	Concrete		1071	10,000.0	CY	0.00	0.00	0.00	\$0.00	\$0.00	0.00 %
	▼3.1	Concrete Footings		1089	1,000.00	CY	0.00	0.00	0.00	\$0.00	\$0.00	0.00 %
	3.1.1	Place/Strip Footing Forms		1090	500.00	SF	0.00	0.00	0.00	\$0.00	\$0.00	0.00 %
	3.1.2	Pour Footings		1091	0.00	СУ	0.00	0.00	0.00	\$0.00	\$0.00	0.00 %

5.2.6 Variance

Variance is the difference between EV and AC, expressed in the following equation:

Earned Value - Actual Cost = Variance

It indicates if you are performing better or worse than planned up to that point. InEight Control uses the term Gain/Loss (G/L) rather than variance, including the following columns:

- CE actual cost G/L (to date)
- CE MHrs G/L (to date)
- CB actual cost G/L (to date)
- CB MHrs G/L (to date)

5.2.7 Remaining

Remaining is a general finance term for money that is not yet used. InEight Control uses the following terms:

- CE remaining cost
- CB remaining cost

These terms refer to a very specific relationship expressed in the equation:

Planned Value - Actual Cost = Remaining Value

In other words, it is the difference between what you originally planned and what you have spent so far, to help you understand how much cost or how many man-hours you have left.

••••	>	Actuals 5/3/2017	to 5/19/2017 🛗	< ••	•• >		Descr: Current Budget
	UOM	Qty Complete (To Date)	MH/Unit (To Date)	C B-MH G/L (To Date)	Total Cost (To Date)	C B-Total Cost G/L (Tb Date)	Total Cost Gain or Loss (To Date) Formula: C B-Earned Total Cost (To Date) -

	3.1.1	Place/Strip Footing Forms	\$0.00	\$8,000.00	\$5,000.00	\$0.00	\$0.00	\$8,000.00
	3.1.2	Pour Footings	\$0.00	\$0.00	\$0.00	\$0.00	\$0.00	\$0.00

5.2.8 Productivity

If you are the contractor building a project, you will need to monitor the performance of your crews, including how productive they are and how much they are being paid.

Productivity is a measure of effectiveness. The rate of output per unit of input. An example would be if you have estimated that you can install a light switch in 1 hour and it takes you 1.5 hours you are not being very productive. In InEight **CB-PF** is productivity and can be measured with the following equation:

Productivity = $\frac{\text{Earned MH}}{\text{Actual MH}}$

$$0.667 = \frac{1}{1.5}$$

Газ	ks	:	Task D	et < •••	· >	Actuals 4/25/201	7 to 4/25/2017 🎬		Descr: Current Budget			
	CBS Position	Description	WBS Phase Code	St TO Oty	UOM -	Units/MH (To	MH (To Date)	C B-PF	Productivity Factor Formula: C B-MH Earned (To Date) / MH	(To	Labor Cost/MH (To Date)	CF (To Date)

5.2.8.5 Compensation Factor (CF)

Compensation is the amount of money paid to an employee for their hours worked. **Compensation Factor** is a numerical value comparing the budgeted compensation to the actual compensation. An example would be if you had budgeted using master electricians (making \$35/hour) to install light switches, but you actually used 2nd year apprentices (making \$26/hour) where you would have a compensation factor that is off. In InEight, Compensation Factor is displayed as **CF (To Date)**. You can calculate it as follows:

Compensation Factor = Budgeted MH Cost Actual MH Cost

1 35	_	\$ 35
1.55	_	\$ 26

Fas	ks	:	1	ask Dei		· > •	Actuals	4/25/201	7 to 4/25/2017 🋗						npensatio	
	CBS Position =	Description	P	/BS hase = ode	Foreca st T0 Oty	WOM -	Units/MH (To Date)		MH (To Date)	C B-PF	Unit Cost (To Date)	Labor Cost/MH (To Date)	CF (To Date) Fo Fo Unit	=actor (rmula: (t Cost /	To Date) C B-Labo ' Labor Ur	r
	1	Job Overhead	ł	1002	1.00	Lump Su.	1	0.00	0.00	0.00	\$0.00	\$0.00	_	Cost (T	o Date)	_

	3.1.1	Place/Strip Footing Forms	ł	1090	500.00	SF		0.00	0.00	0.00	\$0.00	\$0.00	0.0	00		
	3.1.2	Pour Footings	1	1091	0.00	СУ		0.00	0.00	0.00	\$0.00	\$0.00	0.0	00		

5.2.8.6 Labor Efficiency Index (LEI)

Labor Efficiency Index (LEI) is a numerical value assigned to indicate the effectiveness of resource utilization. You can calculate LEI using the following formula:

Labor Efficiency Index = Productivity x Compensation Factor

.90 = .67 x 1.35

NOTE

If LEI is greater than 1, it means that you are using your resource effectively.

If LEI is lower than 1, it means your resources are being used poorly.

5.2.9 InEight Plan Quantity

The Plan component total qty column shows the sum of the component quantities from Plan and Control and lets you update the Forecast (T/O) qty to match this value.

							CBS	ACS	
Ac	tions	• (+)	Ľ	\otimes			Sur	n component total qty m of component quantities	s
	Tas	⊗ CBS		Description	WBS phase	:	Actuals 11 Actual qty (to	Plan	Act
-		position			code		date)	component 👃 - total qty	MH date

	2	2	s	
		-	- A Forecas	. 109
		5	Install conduit	1139

In Plan, WBS phase code 1139 is assigned to components Conduit material with a quantity of 150 and Install conduit with a quantity of 120.

	Compo	onent details							
Ξ		Name		Claiming scheme			Quantity	WBS	
ф			Т		Ŧ	Т	T		Т
		Road Subgrade		Road Subgrade			293.60000	1008	
60		Conduit material		Conduit			150.00000	1139	
0		Install conduit		Electrical			120.00000	1139	

In the CBS, the Plan component total qty for the Install conduit is 270, which is a total of the two WBS 1139 components in Plan.

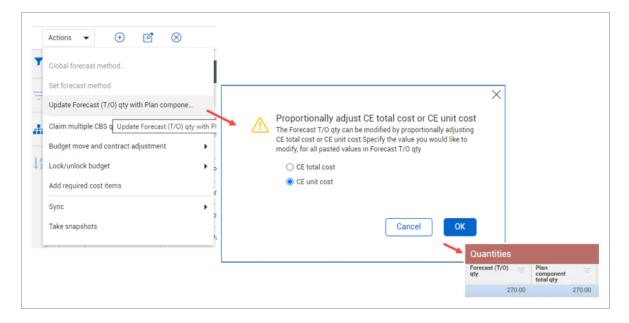

The Forecast (T/O) - Plan component qty column is the difference between the Forecast (T/O) and the Plan component quantity.

E	۲ ctions	9		Mile Slide	- Phase 2 (Carrying)	Control / Work	kspaces	CBS	,	Forecast (T/O) - Pla qty delta Difference between I (T/O) qty and Plan c total quantity colum Formula	Forecast	MS

5.2.9.7 Update Forecast (T/O) quantity with Plan components

The Update Forecast (T/O) qty with Plan component total quantity option located under the Actions drop-down, copies the Plan component total quantity over to the Forecast (T/O) quantity. You can also right-click in the context menu to see this option.

5.3 DATE RANGE SETUP

InEight Control gives you flexibility in the form of a Date Range option. The following Step by Step walks through how the Date Range setup feature works.

Date Range Setup

1. Click the View drop-down to change your view.

2. Select the **Progress** viewset from the View drop-down list.

	Vi	ew :	CE + CB 🔻
	D USD	m†	PT view
	-		Cost categories

0.00			0.00	Last month end	8	ι
0.00			0.00	Last month (period)		

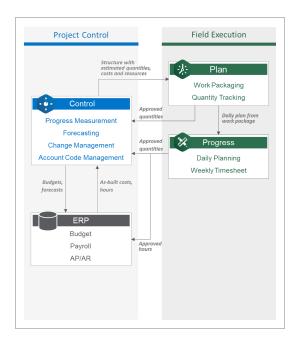

TIP Both week and month end date rules are determined during project setup within the Fiscal Calendar setting. (See lesson 12.2 Project Settings on page 504 for more information.)

5.4 ACTUALS BY SYNC

InEight Control allows you to import actuals by synchronizing with other systems. Using the Sync feature, you can import:

- Actual quantities from InEight Plan
- Actual hours and costs from your ERP system

The following diagram shows the flow of quantities, costs, and hours between InEight Plan, InEight Progress, your ERP system, and InEight Control.

You access all Sync operations from the Actions menu when on the CBS register tab. You will note there are other Sync related operations on the Actions menu, but for this lesson, you will focus on the *Get* operations that bring actuals into InEight Control. (See <u>InEight Control Interfaces</u> for more information on sync operations.)

5.4.1 Sync Actual Quantities from InEight Plan

The following steps walk you through the process for synchronizing quantities from InEight Plan.

Sync Quantities from InEight Plan

- 1. From the InEight Control main page, click the **Actions** menu.
- 2. Select **Sync** from the Actions drop-down list.
- 3. Select Get Plan Quantities from the Sync drop-down list.
- 4. Select the Through previous pay period option from the Get Plan Quantities drop-down list.

NOTE Follow the same steps for synchronizing with your ERP system to import actual hours and costs using the Get Actual Costs and MH option.

5.4.2 Sync Actual Hours and Costs from ERP

You follow the same steps for synchronizing with your ERP system to import actual hours and costs, using the **Get Actual Costs and MH** option.

5.4.3 Get Actual cost from InEight Contract

The Get actual cost from Contract feature lets you pull the actual cost from Contract and show in Control > **Workspaces**.

After the Get actual cost from Contract setting is enabled in Settings > Control > **Project Tracking**, contract actual costs can be shown in Control > **Workspaces** after the batch process between Contract and Control is run. The goods receipts and invoice receipts are sent to Control via the Actuals batch job which runs approximately every 10 minutes.

The actuals only include whichever is greater between the sum of the goods receipts and the sum of the invoices on the cost item.

5.4.4 Update % Complete from Contract

When a schedule of value line item is claimed against in Plan, the Contract progression information can be configured to interface with Control for cost items that are associated to the contract.

Contra	cts >	- New Cont	ract CAD S	3					
Actions	• < н	EADER	LINE ITE	MS	SCHEDULE OF VA	LUES		OOR CHANGE RDER LOG	BACK CHARGES
(+)									
	lule of value	items							
		Contr =	Descri	Schedule -	- UoM -	Unit price	÷	Schedule value \Xi	WBS code

In Settings > Control > Project Tracking > **Actuals**, you can switch the Update % complete from Contract toggle to *On* to let this information interface with Control.

Under the Update % complete from Contract toggle is the Calculate percent complete for individual cost items as a percentage of, drop-down menu option. This lets you define how you want to calculate the percent complete for cost items.

ROJECT TRACKING ES	TIMATE RESOURCES	SCHEDULE	REVENUE	SYNC INTEGRATIONS	OTH

ctions														
	ponent details													
	ponent details Name	Disc	ipline / Commodity	Claiming scheme	Quantity	WBS	Step	% Cl Com	Date	Quantity	Install qty	This perio	UoM	Qty joi.

The selection made in the Calculate percent complete for individual cost items as a percentage of setting in Settings > Control > Project Tracking > **Actuals** determines how the percent complete is calculated for your cost item in Control > **Workspaces**. The calculation for this is option: (updated % complete on the cost item) = (SOV unit price) x (Claimed qty in Contract or Plan) ÷ (Denominator in settings).

Update % complete from Contract (i)	\bigcirc
Calculate percent complete for individual cost items as a percen	itage of
Current estimate total cost	-
Current budget total cost	
Committed total cost	
Forecast total cost	
Current estimate total cost	

When the Get Quantities sync is run in Control > **Workspaces**, the claims made against the contract item generates a new % complete value based on the settings and claimed quantity in Control to match.

						4.3	JOB Forecast Correction	100.00 %	\$ 6,000.00	30.00						

5.4.4.1 Calculations

The calculation for this is option: (updated % complete on the cost item) = (SOV unit price) x (Claimed qty in Contract or Plan) \div (Denominator in settings). Actual qty (to date) = % complete * Forecast (T/O) qty OR CB total qty (depending on settings).

NOTE The Get Quantities sync must be executed in order for the claims made against the contract item(s) to show in Control > Workspaces.

5.5 IMPORT ACTUAL VALUES FROM EXCEL OR CSV

InEight Control allows you to import actual costs, manhours and quantities by using Excel or a CSV file. This can all be done without the need for any ERP software.

You can access the Import function by navigating to the CBS register tab in Control Workspaces, then selecting the Import icon and selecting Actuals.

		V	iew : F	Progress			•
:=	С	\$	Π4	٦		\$≡	Q
			Import	:	tuals	02/24/20	122 to
	-		Cost it	ems	ual qty (to e)		Actua MHrs
\$ 0.0	00		Actual	s	ŕ	0.00	date)
\$ 0.0			Comm	itment		0.00	
\$ 0.0	00					0.00	

Once Actuals is selected from the Import icon, the Import actuals data pop-up window appears.

Overview - Import actuals data

	Title	Description
1	Drag and Drop file	Once you have created your Excel or CSV import file, you will drop it here for further processing. You will be notified on any importing errors towards the end of the import process. You will be able to go back, correct your errors, and re-process the file.
2	Import type	The two options for Import type are:1. Cost items and cost item attributes2. Actual values3. Commitment Values
3	Cost item matching criteria	The two options for cost item matching criteria are:1. WBS position2. CBS position
4	Cost categories list	When selecting the Cost categories list, and Excel file downloads that contains a listing of all cost categories. This is to be used as reference when creating your Excel/CSV file import.
5	Information message	This information provides a description of available functionality and instructions for proceeding to the next step.

	Mile Slide - Phase 2	/ 0	Control

9	Holiday	Level 4	

You will need to create your Excel/CSV import file prior to uploading into Control. Below is an example of a possible Excel import file option.

Α	В	C	D	E	F	G	Н
CBS Positi	Posting Date	Qty	MH	EQP Hour	Cost	Cost Category	Notes
1.1.2.4.1	07/12/2022	5					
1.1.2.4.2	07/14/2022		3		300	Labor Base	
1.1.2.4.3	07/20/2022			6	450	Construction equipment	Backhoe hours

NOTE If you are uploading cost items with cost, then cost categories are required.

The following steps walk you through the process for importing actual costs from Excel.

Importing Actuals from Excel

- 1. Create an import Excel sheet containing either WBS phase codes or CBS position codes.
- 2. From the InEight Control Workspaces page, click the **Import** icon, from the right toolbar.
- 3. Select Actuals.
- 4. On the Import actuals data pop-up window, for Import type select Actuals values.
- 5. For Cost item matching criteria, select **CBS position**.
- 6. Select the **Browse** icon on the middle of the screen, to import your Excel sheet containing actual values.
- 7. After selecting your **Excel** file, the Drag and drop box will turn green.
- 8. Scroll to the bottom of the Import actuals pop-up window and select Next.
- 9. Start mapping your Excel fields with the Control system fields.
- 10. Select Next.
- 11. Choose a date format from the date drop-down list.
- 12. Select Next.
- 13. Select Next.
- 14. Select Import Now.

5.6 PROGRESS CONTROL SETTINGS

InEight Control integrates with several other programs. Within the tool, a few specific columns allow you to manage the information that is sent to other InEight applications and to your ERP system. Below is a table of the key columns and their functions.

Column Name	Function
Allow As-Built	Allows you to choose whether a cost item accepts actual cost, quantities, both, or none. Once this item receives actual costs, quantities, or man-hours, this setting

Column Name	Function
	cannot be adjusted (changed from All to None).
As-built lock	 Once you lock the ERP status, your ERP does not allow the WBS to be progressed. Example use cases for locking ERP status: Work will not begin for two more years Foreman is not allowed to claim more quantity because work is 100% complete Work is complete and you do not want people mistakenly charging cost to completed to cost items
Hide in Plan and Progress	 Allows the user to choose whether to have a cost item available to use in InEight Plan and InEight Progress. Example use case for Hiding in Plan and Progress: Indirect staff cost codes should not be available for direct labor to charge

The steps below walk you through the various columns and discuss options for changing the settings.

Progress Control Settings

For this step you will need to have a subordinate available to use.

- 1. On the Control main page CBS tab, select the **Progress** view.
- 2. Navigate to the Task Details data block.
- 3. Select the second **Data Panel** in the Task Details data block.
- 4. Double click in the **Allow As-Built** field of the subordinate cost item and select the drop-down arrow.
- 5. Select All.
- 6. Navigate to the **Third Panel** of the Task Detail data block.
- 7. Select the Hide in Plan and Progress check box of the cost item.

5.7 VENDOR WORK HOURS FROM PROGRESS

5.7.1 Vendor MHrs from Progress

You can see the subcontract man-hours in Control for cost items that derive from InEight Progress. Subcontract performance can be tracked in Progress with data coming into Control for increased transparency, improved monitoring, and analysis.

In addition to assigning a vendor to a cost item, and viewing the assigned vendors from InEight Contract, you can also see the claimed MHrs originating from Progress in Control > **Workspaces**, upon approval in Progress.

After the claimed vendor hours are approved in Progress, the Actual vendor MHrs (to date) and Actual columns populate with the claimed hours. This helps to find and focus on the true causes of any issues and support the ongoing work in the best way possible.

Actions	→ (+)	Ľ	\otimes		CBS	ACS	F	PAY ITEMS

5.8 ACTUALS BY MANUAL ENTRY

5.8.1 Manual Entry Quantity Claiming

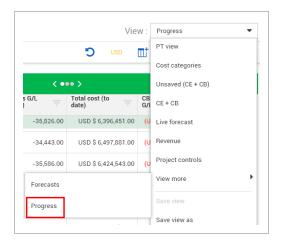

There are times when you will want to enter quantities directly in InEight Control. Reasons include any time you do not want a foreman to have access to codes to charge against or claim quantities to. A more specific example may include indirect staff codes or indirect costs that you do not want your foreman who are claiming progress in the field to have access to.

NOTE Any time you claim a cost item directly in InEight Control, the option will not be available to claim that cost item within InEight Plan.

Next, you will do a Step by Step for entering quantities in Control.

Quantity Claiming by Manual Entry

1. From the Control Workspaces page CBS tab, select the Progress view.

NOTE Before claiming quantities for a cost item, make sure the Hide in Plan and Progress column is checked.

2. In the Actuals data block, double click on the **Actual qty (To Date)** cell of the Module [your initials] – [description] cost item.

					CBS	ACS	PAY	ITEMS

• Changes are visible in the CBS Audit Log

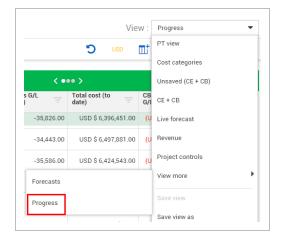

TIP You can enter negative quantities when claiming in Control.

5.8.2 Manual Entry Man-Hour Adjustment

To manually enter actual labor costs, you will need to adjust the man-hours. The following Step by Step shows how to make a manual man-hour adjustment in Control.

Man-Hour Adjustment by Manual Entry

1. On the Control Workspaces CBS tab, select the **Progress** view.

2. In the Actuals data block, double click on the **Actual qty (To Date)** cell of the Module [your initials] – [description].

				CBS	ACS	PAY	ITEMS

5.9 ACTUALS HISTORY

Once progress is tracked against a cost item, you can view its actuals claim history. You can view actuals history of a cost item by right clicking on a cost item and selecting **Actuals details** from the menu. On the resulting slide out panel, you can view the history of when actual quantities, costs, and man-hours were posted by clicking on the Actuals History tab of the cost item.

The Actuals history tab displays and groups the actual claim history by posting date. Within in each posting date folder you can view as-built progress details of quantity, cost, man-hours, and equipment hours of the specific cost item selected in the CBS.

	CLAIM ACTUALS	ACTUALS HISTORY			
	Posting date	Quantity	Cost	Man hours	Equipment hours
E	D <u>11/16/2018</u>	0.00	\$ 0.00	40.00	0.00

In addition, by clicking on the posting date link, you can view more specific claim history details such as actuals type, cost category, employee change by, and notes.

CLAIM ACTUALS	1	ACTUALS HIST	ORY						
Posting date	13	Actuals type	Ŧ	Actuals completed	 Cost category	Ŧ	Changed by	Notes	
≥ 11/16/2018		Man Hours		40.00			Control - [Paul Bennion]		

5.10 TRACK OPEN/REMAINING AND TOTAL COMMITTED COSTS

Additional information about purchase orders and contracts (for any particular task) can be viewed and updated within CBS columns. This provides users with a more comprehensive data set in one location.

Committed costs are the purchase orders or subcontract commitments that a cost item may have against it. To determine open and total commitments, look at the agreed or pending purchase order amounts that are associated to any particular cost item. This information is typically exported from your ERP or accounting system.

Open/Remaining committed cost: Total committed cost - Actual cost (amount that still needs to be paid for a cost item).

Total committed cost: The summation of all purchase order and/or contract obligation amounts assigned to a cost item.

Open/Remaining committed cost adjustment: A debit or credit to the existing Open committed/Remaining cost value.

New open committed cost: Open/Remaining committed cost + Open/Remaining committed cost adjustment.

However, there is also the option to use a generic API to push committed cost values into InEight Control. If your organization does not have an ERP system, you can configure the endpoints in APIM and push over your committed cost values.

Viewing Open/Remaining and Total Committed Costs

1. On the CBS register tab, select the **Group Columns** icon to the right of the page. The icon will turn yellow when turned on.

	PAY ITEMS	>	١	/iew :	Forecast	6
		C	\$	∎‡	•	•
ere to group by th	at column					
tails	< •••• >			:	Fore	cast

- Tasks, Task details and Commitments data block need to be present on this screen
- If the Commitments data block has not been created, create a custom data block using the Data Icon and include columns Remaining committed cost, and Total committed cost. Insert this data block into your view.
- 2. Drag the **UOM** column from the Task details data block, and drop it into the grey bar area

3. To view a more granular level of information, navigate into the **context menu** for a cost item, and select **Actuals details**.

Cost type	e: Subcontracts		
	1.1.3.5.5	Water & Ice Distril	Сору
	1.1.3.5.6	Trash Removal	Paste
	1.1.3.2.2	OSC - Third Party	
			New subordinate cost item
			(X) Delete cost items(s)
			Adjust CBS position
			Cost item details
			Actuals details

- 4. Once in the Actuals details, navigate to the Commitments tab.
 - Here is a more concentrated view of the cost category breakdown of the Open and Total commitments

 It's also possible to update information. For example: the below cost item for Water & Ice Distribution, the New total committed cost is showing that a contract was signed for \$1,267.87.

1069 1.1.3.5.5 Water & Ice Distribution					
	CLAIM ACTUALS	S ACTUALS HIS	STORY COMM	ITMENTS	
Open committed cost	То	otal committed cost		N	
\$ 700.00	s	1,267.87			
Cost category		Open committed cost adjustment	New open committed cost	Total committed cost adjustment	New total committed cost
∧ Total		\$ 0.00	\$ 700.00	\$ 0.00	\$ 1,267.
✓ Labor		\$ 0.00	\$ 0.00	\$ 0.00	\$ 0.
		\$ 0.00	\$ 0.00	\$ 0.00	\$ O.
FOM Rented Equipment		\$ 0.00	\$ 0.00	\$ 0.00	\$ O.
\vee Supplies		\$ 0.00	\$ 0.00	\$ 0.00	\$ O.
✓ Materials		\$ 0.00	\$ 0.00	\$ 0.00	\$ 0.1
✓ Subcontract		\$ 0.00	\$ 700.00	\$ 0.00	\$ 1,267.

• There is \$700.00 left remaining to pay the full \$1,267.87 subcontract, as shown in the New open committed costs column

1069 1.1.3.5.5 Water & Ice Distribution					
	CLAIM ACTUALS	ACTUALS HIS	STORY COM	MITMENTS	
Open committed cost	Total con	mitted cost			
\$ 700.00	\$ 1,267.8	7			
Cost category	Open adjust	committed cost tment	New open committed cost	Total committed cost adjustment	New total committed cost
∧ Total		\$ 0.00	\$ 700.0	D \$ 0.00	\$ 1,267.8
∨ Labor		\$ 0.00	\$ 0.0	0 \$ 0.00	\$ 0.0
		\$ 0.00	\$ 0.0	0 \$ 0.00	\$ 0.0
✓ FOM Rented Equipment		\$ 0.00	\$ 0.0	0 \$ 0.00	\$ 0.0
✓ Supplies		\$ 0.00	\$ 0.0	D \$ 0.00	\$ 0.0
✓ Materials		\$ 0.00	\$ 0.0	D \$ 0.00	\$ 0.0
 Subcontract 		\$ 0.00	\$ 700.0	0 \$ 0.00	\$ 1,267.8

 Assuming a bill of \$100.00 was just paid, it's possible to update the Open committed cost adjustment field with this value. Notice how the New open/remaining committed cost decreases to \$600.00, after making an adjustment of \$-100.00 to the Open committed cost adjustment field.

 Subcontract 		(\$100.00)	\$ 600.00	\$ 100.00	\$ 1,367.8

5. Select **Apply** to apply the above changes.

Tasks			:	Task details	< •••• >		Com	ni <	•>
	CBS position -	Description	WBS phase	Forecast (T/O)	UoM	Cost type 🚽	Open commit cost	ted 👘	Total committed cost
Cost type:	Subcontracts								
	1.1.3.2.2	OSC - Third Party I	1054	13.00	MWk	Subcontracts		\$ 7,525.23	\$ 13,000.0
	1.1.3.5.5	Water & Ice Distrib	1069	3,489.55	DMH	Subcontracts		\$ 600.00	\$ 1,367.8
	1.1.3.5.6	Trash Removal	1070	3,489.55	DMH	Subcontracts		\$ 309.00	\$ 873.2

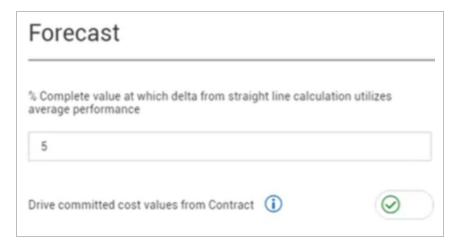

6. Back on the CBS, you can now see your new updated values for this cost item.

NOTE Both the Open/Remaining committed cost and the Total committed cost values can be edited in the Actuals details slideout > Commitments tab (with the right permissions).

5.11 COMMITTED COST FROM CONTRACT

When the Drive committed cost values setting is on, your committed cost is then derived from Contracts.

When the switch is off, your committed cost is driven from the ERP. Regardless of the state of the switch, you can always manually enter your committed cost directly in the product or via a Microsoft Excel import.

With the setting on, all of your committed cost values initially zero out, and then pull over all of your committed cost values that exist in InEight Contract.

For example, if you have a cost item that is associated with a contract, those values are pulled over from Contract and populate the total committed cost and open/remaining committed cost columns.

The calculation is *Forecast final cost* = your *Total committed cost; Forecast remaining cost* = your *Open/Remaining Committed Cost*.

In a contract on the Line items tab, change your view to Progress. Take note of the WBS phase code and then view the Gross amount. The gross amount for the cost item is the exact amount for the total committed cost, which includes your line item amount, plus tax.

Total gross amount is your line item amount plus tax. That is going to be your total committed cost value. The calculation for that: *Total committed cost = Line item amount + Tax* (this is also called Gross amount in Contract)

If you have a cost item that is associated with multiple line items in a single contract or across multiple contracts, the total committed cost for that cost item is the gross amount for all the line items that cost item is associated with.

If the WBS element is associated to three different line items, the sum of those three gross amounts is the total committed cost value. A best practice is to associate a single cost item to a single line item.

To get your Open/Remaining Committed Cost, calculate what you still have to pay for your remaining commitments. It is your total committed costs minus what you have already paid. You track payments in contract in three different ways:

- goods receipts
- accruals
- invoices

Invoices are generated in your payment forms.

The calculation is *Open/Remaining Committed Cost= Total committed cost - Max(Goods receipt amount, Invoice amount) - Accrual amount.*

Exercise 5.1 — Progress Measurement

The purpose of this exercise is to give you more familiarity with the InEight Control progress measurement terminology.

- 1. From the CBS register in InEight Control, create a new viewset with one or more custom data blocks that contain the planned, earned, and actual measurements you would want to see in your project.
- 2. Add additional productivity measurements (e.g., CF, LEI) as desired.

Congratulations, you have completed this exercise!

Review

- 1. How can you determine what your productivity is for a specific timeframe?
 - a. Excel Spreadsheet (Date Range Select)
 - b. Forecast Final MH (Date Range Select)
 - c. CB Total MH (Date Range Select)
 - d. Actuals CB Productivity Factor (Date Range Select)
- 2. What term describes your Original Budget plus or minus approved changes?
 - a. Current Actuals
 - b. Current Budget
 - c. Current Estimate
 - d. Current Cost Changes
- 3. How can you view the actuals history of a cost item?
 - a. Select the Actuals History viewset
 - b. Right clicking on a cost item and selecting Cost item details
 - C. Right clicking on a cost item and selecting Actuals details
 - d. Selecting Actuals History from the Actions menu

Summary

As a result of this lesson, you can now:

- Define the measurements for analyzing the progress of a project
- Set up a Date Range for progress data
- Get Plan quantities, actual costs, and actual man-hours using the Sync feature
- Explain the settings used for managing progress data shared between applications
- · Add and adjust actuals manually
- View actuals history

FORECASTING

Lesson Duration: 45 minutes

Lesson Objectives

After completing this lesson, you will be able to:

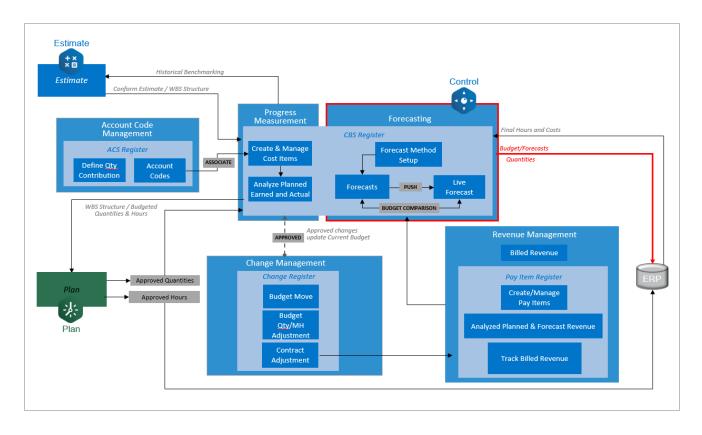

- Differentiate and utilize InEight forecasting methods
- Manage forecasts
- Manage Time Phased Forecasting
- Push to Live Forecast
- View the Fiscal Calendar settings

6.1 INEIGHT CONTROL WORKFLOW - FORECASTING

6.2 FORECASTING OVERVIEW

6.2.1 Forecast Data Block

All forecasting is done using the Forecast data block.

Forecast Final	Forecast Final HH	Forecast Final Man Hour/Unit 📃	Forecast Final PF	Forecast Final Unit Cost	Forecast Method
\$250,000.00	0.00	0.00	0.00	\$250,000.00	Current estimate
\$360,000.00	7,200.00	0.72	1.11	\$36.00	Current budget
\$1,500,000.00	30,000.00	3.00	1.00	\$150.00	Current estimate
\$1,000,000.00	24,000.00	30.00	0.83	\$1,250.00	Rollup

The Forecast data block contains columns for determining the Forecast Final Unit Cost, Forecast Final Cost, Forecast Final MHrs, and productivity, as well as the Forecast Method. Further in the lesson, you will learn the details of how to input a forecast.

The Control main page includes a default Forecasts viewset that contains the Forecast data block.

6.2.2 Individual Forecasts

TIP

The Control application allows you to create multiple individual forecasts as needed, giving you flexibility to try out different forecasting methods and "what if" scenarios. The Manage Forecasts section of this lesson walks you through how to save and share your forecasts with others on your project.

You can access all the forecasts you have access to via the drop-down on the Forecast data block header.

This shows you all your forecasts, as well as any other forecasts that have been shared with you.

6.2.3 Live Forecast

In Control, the Live Forecast is the official project forecast used for financial reporting and is shared with all members of the project automatically. Data from other forecasts can be pushed to the Live Forecast to keep it up to date. The Live Forecast is managed using its own data block.

🖈 Live forecast	This Month	<	•••••• >		O 11/15/2018
Forecast	Forecast final MHrs	Forecast final man hours/Unit	Forecast final = productivit	Forecast remaining cost	Forecast method
\$ 1,500,000.00	30,000.00	3.00	1.00	\$ 1,500,000.00	Current estimate
\$ 1,097,500.00	22,390.00	22.39	0.94	\$ 1,097,500.00	Rollup
\$ 800,000.00	16,000.00	20.00	1.00	\$ 800,000.00	Current estimate
\$ 200,000.00	4,440.00	22.20	0.90	\$ 200,000.00	Current estimate
\$ 97 500 00	1 950 00	0.98	0.51	\$ 97 500 00	Current estimate

TIP Th

The Control main page includes a default Forecasts viewset that contains the Forecast data block.

Only users with the right permissions have access to update the Live Forecast. Updating the Live Forecast is covered in greater detail further in the lesson.

6.2.3.1 Live Forecast grid navigation

You can access the cost categories slide-out panel quickly by clicking the **Live Forecast View Cost Categories** icon.

Live f	orecast				< •
Forection final cost		Forecast final MHrs	1	Forecast final man hours/Unit	T
	\$ 36,500.00	400	0.00		400.00
	\$ 25,000.00	300	0.00		0.03
1	\$ 5,000.00	(0.00		0.00
J	\$ 5,000.00	100	0.00		0.01
	\$ 1,500.00	(0.00		0.00

Clicking the icon takes you directly to the cost categories slide-out panel in the cost item details.

6.3 FORECAST METHODS

The Forecast Method establishes the appropriate forecast unit cost, which is used to calculate the total forecast cost. The Forecast Method applies to individual cost items and can be changed at any time.

You can use several forecast production methods to calculate the cost of the remaining work associated with a cost item. This enables the control of forecasting on a cost item by cost item basis by controlling the calculation of the cost of the remaining work. The different methods available for forecasting are:

	Forecast Methods	
Method	Calculation	Apply to
Current Budget (CB)	Actual Total cost + (Current budget unit cost * Quantity remaining)	Terminal or superior cost items
Current Estimate (CE)	Actual Total cost + (Current estimate unit cost * Quantity remaining)	Terminal or superior

	Forecast Methods	
		cost items
Average Performance	Actual Total cost + (Actual unit cost * Quantity remaining)	Terminal or superior cost items
Manual	Manually entered forecast value	Terminal or Superior cost items
Rollup	Forecast Total Cost = sum of subordinate forecast values	Superior cost items
Committed Cost	Actual Total cost + Open/Remaining committed cost	Terminal or superior cost items
None	The Forecast total cost will be 0	Terminal or superior cost items
Contract	Forecast total cost = Line item gross amount + Draft vendor change order amount + Remaining to buy (value allocated to the first line item in the contract)	Terminal or superior cost items
Detailed ETC	Actual Total cost + sum (Forecast remaining cost) for all assigned forecast resources.	Terminal cost items
Static manual time phased forecasting (TPF)	The sum of the manually distributed time phased forecast cost.	Terminal or superior cost items
Custom (customer specified)	Calculation specified by customer.	Terminal or superior cost items

6.3.1 Forecast Method Assignment

There are three different ways to assign a forecast method:

- Globally to all cost items in the project
- Selection of multiple cost items

• Individual cost item

6.3.1.1 Global Forecast Method

From the Actions menu, you can set the forecast method globally for all the cost items within the project.

NOTE The Global forecast method only applies to the forecasted items of the user who performs the function. It does not apply to other users in the project.

The following steps walk you through applying a global Forecast Method.

Set Global Forecast Method

- 1. From the CBS tab register, select the **View** menu.
- 2. Select the Project Controls viewset.
- 3. Click on the Actions drop-down menu and select Global Forecast Method.
- 4. Select the **Current Budget** Forecast Method.
- 5. Click Apply.

NOTE Only **terminal** cost items will adjust per the global Forecast Method selected. The parent item Forecast Method will stay as **Rollup**.

6. Click **Yes** on the prompt that appears.

6.3.1.2 Forecast Method for Selected Items

You can also set the forecast method for selected cost items, as shown in the steps below.

Set the Forecast Method for Selected Items

1. In the Tasks data block, select the **check box** next to the desired tasks.

6.3.1.3 Forecast Method for Individual Items

You may need to change the forecast method for a single cost item. The following Step by Step walks you through how to do so.

Set the Forecast Method for Individual Items

- 1. In the Forecast data block, locate the Forecast Method column.
- 2. Double click on the Forecast Method field for the your desired cost item.
 - A dropdown menu appears where you can select your Forecast Method from a list

au	(S 🕐		orquit	ed from Live forec

6.3.1.4 Average Performance Forecast Method

The average performance forecast method lets you use actuals for a specific time frame range to determine the unit cost and rate for the remaining work when calculating the remaining forecast. Forecasting using average performance lets you forecast the remainder of work based off completed work.

When Average performance is selected as the forecast method in the CBS, you can click the value in the Average performance settings column and select a date range to use for the actual rate of completion for the remainder of work.

This feature lets you identify a length of time you want to utilize a cost item's hours and quantities to determine the install rates for the remaining work.

Click an Average Performance Settings CBS record to access the Average Performance Settings window.

Setting	Usage notes
Calculate average performance over all dates	The average performance for the cost item takes all the dates into account when calculating its average performance.
Calculate average performance based on most recent	You can determine how many weeks or months to calculate the average performance for a cost item. For example, you determine that the last 2 weeks performance best represents how to progress, then you would calculate two weeks of average performance.
Calculate average performance over a specified range	Selecting a date range uses only the specified time range for calculating the average performance.
Calculate average performance from date	You can select a specific date to calculate average performance. After the learning period for the selected cost item is complete, you can use the average performance for a specific date and onward.

The Forecast method and Average performance settings changes are also shown in the cost item details slide-out panel.

6.3.1.5 Committed Cost Forecast Method

Committed Costs are obligations made for contract work or purchase orders that you have agreed to pay for. The Committed Cost forecast method provides you with the ability to use committed cost information to forecast your cost at completion.

Forecast method	Forecast remaining cost	Forecast final unit cost
Rollup	(\$ 122,907,115.92)	(\$ 120,539,221.43)
Rollup	(\$ 142,445,305.28)	(\$ 142,040,228.20)
Rollup	(\$ 129,212.48)	(\$ 12,535.89)
Committed cost 🛛 👻	\$ 10,805.00	\$ 118.05
٩	\$ 8,676.00	\$ 43.88
Current budget	\$ 0.00	\$ 9.18
Current estimate	(\$ 148,693.48)	(\$ 14,869.35)
Average performance	\$ 0.00	\$ 0.00
None Committed cost	\$ 0.00	\$ 0.00

Forecasting cost items can be done in the live or personal forecast, and can be forecasted at the parent or terminal levels. The Committed Cost Forecast method can only be used when cost items have an Allow as-built of All or Costs. When the Allow as-built values are set to None or Quantities, this forecast method cannot be used because cost and committed costs cannot be claimed.

The Committed Cost forecast is mostly utilized on cost items that are driven from purchase orders or contracts. It is not used when you're claiming quantities. For example, this forecast method isn't suitable for direct labor items where quantities are claimed to generate progress and crew performance. This forecast method works well for cost items that are tied to a contract or PO.

When Open/Remaining Committed Cost values are being entered, these values will also update the forecast values in the CBS. There is also an integration available that allows you to import committed cost data from your ERP, instead of manually entering in the data. For more information on Commitment Costs, visit subject Track Open/Remaining and Total Committed Costs within this topic3.3 Cost Item Setup on page 91

The following columns will help you view the Committed Cost forecast method:

Forecast Final Cost: Forecast cost at completion which is equal to the Open/Remaining committed cost plus any Actual cost to date.

Forecast Remaining Cost: This is the amount of money that remaining to be paid out. This column is equal to the Open/Remaining Committed Cost.

Tasl	Tasks			< •••• > i			Forecast	Forecast Created from Live forec * 🗁 < ••• >				N	O 03/09/2020		
		Description	-	As-built I	ock	Allow as-built	-	Forecast final man hours/Unit	Ŧ		Forecast final productivity factor	Forecast final	Forecast final	Forecast remaining cost	Forecast method
	1.1.1.1	Permits				All			1.00	\$ 11,805.00	2,323.00	1.00	\$ 118.05	\$ 10,805.00	Committed cost

The Committed cost forecast method is most commonly used for costs that are associated to a purchase order tracked through an ERP system. This method doesn't focus on quantities or percent complete, but rather the progression of costs paid towards the final agreed upon PO value."

6.3.1.6 Contract Forecast Method

Using this forecast method, you can forecast by Contract values. This forecast method is only available in the forecast drop down for cost items that are assigned to a Contract.

NOTE Any modifications that you make in Contract automatically updates and comes into Control.

C 02/15/2022	•
Forecast method	-
Contract	•
Q	
Current estimate	•
Average performa	n
None	
Committed cost	
Contract	•
	_

When a cost item is assigned to a contract, you have the option of adding the read-only column **Number of Contracts** to your CBS. This column is an integer value that counts the number of contracts a particular cost item is associated to. You have to go into Contracts to see which Contract your cost item is associated to.

If the **Number of Contracts** column is set to zero, the Contract Forecast Method becomes unavailable from the Live Forecast, Personal Forecast, and the Cost Item Details slideout drop down for Live Forecast Method on the Details tab.

Contract Forecast Method pulls the cost that is associated to a specific cost item from Contracts. Cost items can be associated to the following if using Contract Forecast Method:

- Many different Contracts
- Many different line items across different Contracts

The cost item's Forecast Final Cost value sums up the line item amounts of all cost that is associated to a cost item from Contract.

Unapproved Contract Line Items

The line item price is included in the associated cost item's Contract forecast method when creating new line items in a Contract vendor change order.

After a new line item is saved, a batch process is initiated in the background that sends the line item's net price over to Control.

Forecast Overview Manual Forecasting Forecast Management InEight U - Forecasting Course Forecasting Quick Guide

6.4 MANUAL FORECASTING

Scenario

Assume you have a structural steel installation code being performed by a subcontractor. They have notified the project team that the material cost of the steel has gone up due to a change of thickness of some of the column base plates. You will need to forecast an increase in the total subcontract cost of the code to reflect this change.

You also receive an update from the concrete superintendent that the code for a concrete pouring operation will now be using journeymen instead of apprentice concrete finishers. He has provided the total and you will update the total cost and the labor cost per man-hour.

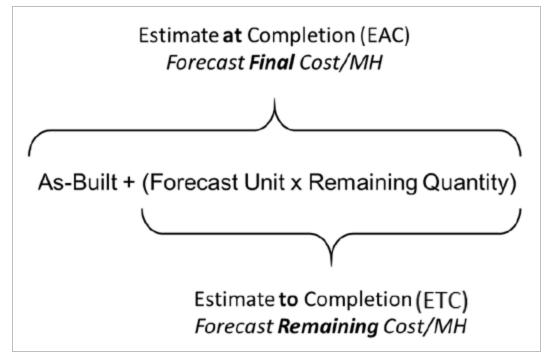

6.4.1 EAC vs. ETC

You can manually enter forecast values for both your Estimate at Completion (EAC) and Estimate to Completion (ETC) values.

Control uses different descriptions than EAC and ETC as indicated below.

Forecast Term	Control Term	What it measures
Estimate at Completion (EAC)	Forecast Final Cost Forecast Final MHrs	As-built + (Forecast Unit Cost x Quantity Remaining)
Estimate to Completion (ETC)	Forecast Remaining Cost Forecast Remaining Man Hour	Forecast Unit Cost x Quantity Remaining

The image below illustrates what EAC and ETC measure:

6.4.2 Manual EAC (Estimate at Complete) Forecast

You can use the Manual (Estimate at Completion) Forecast Method to make a simple, quick adjustment to the calculated forecast numbers, or to forecast the cost of the work remaining, while ignoring actual costs in the calculation of the forecast.

When you enter a forecast cost at the total level, you can have forecast costs:

- Distributed to the cost categories, or
- Back calculated if forecast man-hours are adjusted

To set the forecast total or EAC forecast, type a value into one of the following cells within the forecasting data block:

- Forecast final cost
- Forecast final MHrs
- Forecast Final Man-hours per Unit
- Forecast Productivity Factor
- Forecast Final Cost per Unit

The next two Step by Steps walk you through how to define the Manual (EAC) forecast by adjusting the Forecast Final Cost and the Forecast Final Man-Hours.

Manually Adjust Forecast Final Cost

1. In the Forecast data block, double click the **Forecast Final Cost** cell for a cost item.

•	This will allow you to edit the dollar value manually

3. Hover over the Forecast Final Cost cell of the value you entered and select the View cost categories pop-up.

Forecast	
Forecast Fina 😇	Forecast Fina 😇
120002	View cost categories

• You can see the adjustments that were made by cost category

6.4.2.1 Proportional Adjustment

As you make changes, you may receive a prompt asking you how you would like to adjust other values affected by your change. For example, when you change your Forecast Final Cost, this will affect either:

- Forecast Final MH or
- Forecast Final \$/MH

<u>∧</u> P	roportionally adjust Forecast Final MH or Forecast Final \$/MH	?
	he Forecast Final Cost can be modified by proportionally adjusting Forecast Final N Forecast Final \$/MH. Specify the value you would like to modify:	1H
	Forecast Final MH	
	0.000000000	
	Forecast Final \$/MH	
	0.000000000	
	Cancel	

While one of those values will remain constant, the other will adjust as indicated in the table below:

Forec	asting – Proportional Adjustment Example
Action	Result
Original Forecasted Values	Forecast Final Cost = \$1000 Forecast Final MH = 100 Forecast Final \$/MH = 10
Manually adjust Forecast Final Cost	Forecast Final Cost changes from \$1000 to \$2000
Resulting adjustment Option 1: Adjust Forecast Final MH	Forecast Final Cost / Original Forecast Final \$/MH = Adjusted Forecast Final MH \$2000 / 10 = 200 MH
Resulting adjustment Option 2: Adjust Forecast Final \$/MH	Forecast Final Cost / Original Forecast Final MH = Adjusted Forecast Final \$/MH \$2000 / 100 = 20/MH

6.4.3 Manual ETC (Estimate to Completion) Forecast

The Manual ETC (Estimate to Completion) forecast method can be used to make an adjustment to forecast the unit cost of the work remaining and adding it to the as-built costs in the calculation of the

forecast.

To set the forecast remaining or ETC (Estimate to Complete) forecast, type a value into one of the following cells within the forecasting data block:

- Forecast Remaining Labor Cost/MHr
- Forecast Remaining Labor Cost
- Forecast Remaining Man-hours per Unit
- Forecast Remaining Productivity Factor
- Forecast Remaining Cost per Unit

This will set the unit cost and man hour factors. When applied to the remaining qty to deliver and added to the existing actuals this will equal your total forecast amounts.

6.4.3.2 Detailed ETC FC Method

The Detailed ETC (estimate to completion) method lets you modify the crew makeup and production rates that drive the remaining forecast values (based on remaining quantities and hours).

For example, if you started your project and you used apprentices, and now you prefer to use journeymen, you can swap out resources for your forecast resources and use journeymen instead of apprentices.

In Control settings > Project Tracking, you can now enable forecast methods for terminal cost items when the allow-as built is set to all or cost for Detailed ETC. When the Detailed ETC forecast method is enabled, all existing Current Estimate Resources for that cost item are copied to the Forecast Resources tab in the CBS > Cost Item Details slide-out panel.

When the Detailed ETC setting is enabled, a new tab is available in Cost Item Details called Forecast Resources. This new tab is almost identical to the Current Estimate Resources tab, with the major difference being that the Forecast Resources tab contains forecast information. You can edit these resources and values separately from the current estimate resources for a cost item.

6.5 FORECAST MANAGEMENT

Scenario

Imagine you are covering the concrete portion of the Steel Structure project, and you want to do a "what if" forecast based on a potential change in the type of concrete to be used. This forecast will affect many codes and you do not want it to affect the forecast information for everyone else on the project. Also, your manager requested that you send him the new forecast so he can review the data and compare it to the Live Forecast, which will help decide which path to take.

Depending on the size of your project, you may have multiple engineers involved in forecasting project tasks. For example, a larger team may divide up responsibilities by discipline, with discipline-specific field engineers putting together information for a project manager.

InEight Control accommodates multiple people doing the forecasting, by allowing users to create and save their own forecasts, so they can forecast their items without affecting anyone else's work. They can then share their forecasts with others as needed, accessing all the shared forecasts from the drop-down folder of the Forecast data block.

Forecast	⊿ 0	reated from Li	ve fore			< ••• >	,

4. Click Save.

6.5.2 Load Forecasts

You can load existing shared forecasts, as shown in the Step by Step below.

6.5.3 Project Level Shared Forecasts

You can create up to five forecasts that are automatically shared with members assigned to the project. This lets you collaboratively work together with other team members to work on a forecast, prior to getting pushed to the live forecast. Other members can also edit and push the live forecast.

Selecting the Shared link lets you manage between private and shared access. All team members that share your forecast view can view and edit the forecast, and view any changes made update in real time.

Shared Forecasts

1. To share the forecast, click on the drop-down arrow in the center of the Forecast data block.

Forecast	₫ 0	ctober 202 🔻		< •••	>

6.6 TIME PHASED FORECASTING

Projects are typically overwhelmed by escalating forecast values as the project progresses. What the business thought they were going to spend doesn't end up being very accurate at the end of a project.

One way to mitigate this is to take the forecast and break it down into more consumable, estimate related time blocks/periods, as shown in the screenshot below. This prompts the project engineers to

think about what activities, bills, and costs are going to occur in smaller more mentally digestible time periods.

Projects need to spread their estimate by periods to verify forecast accuracy vs. the actuals spent within that period. One of the key goals of time phased forecasting is to see when you are forecasting to spend allocated budget. You can then determine how accurate your forecast was versus the actuals spent within that period. Based on forecast accuracy, this gives you the opportunity to make manual adjustments within the Time phased forecasting register. It also provides the ability to have the system automatically distribute the forecast for you based upon certain criteria.

TPF gives you visibility into when you are going to spend dollars associated to a cost item in monthly time periods. TPF also helps with cash flow, enabling customers to provide more insight into how much money they need to pay employees and other bills.

After selecting a cost item from the CBS, TPF can be accessed from Control > Workspaces > Actions > Time phased forecasting. This is only if the project settings for TPF is enabled under the Forecast section.

		CBS
Actions 👻 (+) 🖍	\otimes	
Global forecast method Set forecast method Time phased forecasting	Description	Task details Resource

The table below shows the columns from the Time Phased Forecasting page.

Overview – Time phased forecast

	Resource	Description
1	Auto Distribute remaining forecast based on cost curve and start/end dates	This will automatically distribute remaining forecast based on the cost curve being used, in addition to the Start and Finish dates.
2	CBS position	The CBS position identifier number.
3	Description	The description of the CBS.
4	WBS Phase code	Work Breakdown Structure code number.
5	Start	This is the scheduled start date for the cost item.
6	Finish	This is the scheduled finish date for the cost item.
7	Cost Curve	This is a graph/calculation of the costs of production as a function of total quantity produced. Cost curves can be created, viewed and maintained in Settings > Control > Schedule, in the Cost Curves section on the page.
8	Forecast method	Forecast methods include: Current Budget, Current Estimate, Average Performance, Manual (EAC), None, and Rollup.
9	Forecast remaining cost	This is the unsettled balance of forecast. Cost that is projected to still be required to be paid out (varies depending on forecast method).
10	Forecast final cost	Total cost to date + Forecast remaining cost, cost item projected total cost at completion.
11	Phased Forecast Remaining Cost Delta	This is the remaining forecasted cost that has not yet been allocated to a monthly period. It is the difference between the Forecast remaining cost and the sum of forecasted cost currently represented in all remaining months on the TPF window.
12	Load more	This will load additional month columns to view in the TPF window.

6.6.1 TPF Register

The Time phased forecasting register allows you to time phase **auto spread** forecast remaining costs, which are based on cost curves, and start/end dates. You can also **manually override** specific months and change the distribution costs.

For example: you have \$250,000 to spend on a cost item (Forecast remaining cost). You can use Time Phased Forecasting to spread your dollars into monthly allocation buckets. This can be done by automatically spreading the \$250,000 forecast, or by manually overriding the forecast and entering your own values into the monthly buckets.

	CBS	> Time Phase	Foreca									Autos	spread forecast	Manual override

The Auto distribute icon allows you to automatically distribute dollars into monthly allocation buckets. In this case, the allocating of dollars will begin on the **Start** date of May 2020 and stop allocating on **Finish** date month of October of 2020.

* X • 9									
Descript	WBS phase code	Start	Finist	Cos' curv =	Fo me	Forec remai	Phased forecast remaining	Sep '20 cost	Oct '20 cost

6.6.3 Manual Time Phased Forecast

Using the same example, it's also possible to manually forecast the allotted \$3,000 into your desired monthly buckets. By manually entering in \$400,000.00 into the Oct 2020 bucket, your Phased forecast

remaining cost delta changes to \$135,714.29. This represents the remaining amount of dollars to still be forecasted.

6.6.3.1 Proportional Man Hours and Quantity

In addition to Cost, Man hours and Quantity displays on the Time phased forecast grid. If you manually adjusted the cost for one of the months in the grid, a dialog box appears asking to proportionally adjust Man hours and the Quantity.

~	Proportionally adjust MHrs and/or Qty ?
<u> </u>	The man hours and quantity can be modified proportionally for this fiscal period.
	🗹 Man hours
	13.14
	✓ Quantity
	0.13
	Do this for all cost items and don't show this message
	again. This dialog can be re-enabled from the Settings menu (😋) in the
	toolbar.
	Cancel

If for example you doubled your cost in the Time phased forecast, it would also proportionally double your Man hours or Quantity. You can view the values that the man hours and quantity would proportionally adjust to in the read only cells.

If you manually adjusted Man hours or Quantity in the Time phased forecast grid, a dialog box appears asking to proportionally adjust cost and man hours .

Proportionally adjust Cost and/or MHrs ? The cost and man hours can be modified proportionally for this fiscal period.
Cost 649.97
Man hours
 Do this for all cost items and don't show this message again. This dialog can be re-enabled from the Settings menu (^(C)) in the toolbar.
Cancel

Both dialog boxes have the option to adjust proportionally without showing the message again. If you selected this option and want to revert settings back to see the dialog again, in the Time phased forecast grid, go to the Settings icon and select **Enable dialogs**.

1	>
CBS posi	Enable proportional calculations dialogs

6.6.4 Static manual time phased forecasting (TPF)

Static manual TPF lets you distribute a time phased forecast in the future without causing a redistribution. All values entered in the TPF are constant, and any deltas based on current month actuals that do not equal what was forecasted for that month, must be spread manually.

To enable the static manual forecast method, the Forecasting and Push time phased forecast to Live forecast toggles must be set to *On* in Settings > Control > **Forecast**.

Ξ	☆ 103961 Settings				
»		PROJECT TRACKING	FORECAST	ESTIMATE RESOURCES	SCHEDULE
0					
÷					
•		Tim	e phasing		
*		Enable	e time phasing for t	the following:	
8		Forecas	ting (i)		\odot
6		Push Tir	ne phased forecast to Liv	ve forecast	\odot
(2)		Commit	ments (j	(Θ

The static manual forecast can be enabled on the Time phased forecasting page by first making a change to any of the distribution fields. After you click the **Publish** button, the Push these values to the Live forecast dialog box opens. When the Do not redistribute manual spread check box is selected, the values entered in whole months remain as-entered and are not automatically redistributed when actuals are incurred or months close.

6.6.5 Time Phased Forecast Settings

Time phased forecast can be turned on in Settings > Control > **Project Settings**, in the Forecast section of the page.

If the setting is turned off, you will not see the Time phased forecasting option in the Actions dropdown, CBS tab, in the Control > Workspaces page.

6.6.5.2 Enable Time Phased Forecasting

Time phasing	Time phased forecasting provides the ability to spread forecast remaining values into the projects fiscal periods. Navigate to Project details to set the
Enable time phasing for the following:	Start and End dates which define the earliest and
Forecasting (j)	\bigcirc
Push Time phased forecast to Live forecast	Θ

6.6.5.3 Cost Curves

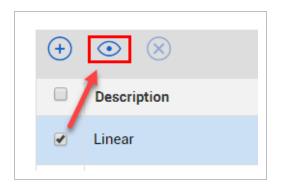

Cost curves determine the proportion of money to be expended in a certain period of time. In the case of Time phased forecasting, the type of cost curve being used determines how forecast will be spread across the monthly forecasting buckets.

In addition, the fiscal calendar also influences how the forecast is spread.

Cost Curves are found in Settings > Control > Schedule, in the Cost Curves section of the page.

Cos	t curves	
Custom	ize cost curve tables	
+	\odot \otimes	
	Description	Data points
	Linear	20
	Front Loaded	2
	Back Loaded	2
	Bell Shaped	21

By selecting a Cost Curve and selecting the View icon, you can view its default distribution.

In this case, the Linear Cost Curve settings displays the cost curve durations and values.

near		20	
From duration %	To duration %		Value %
C	.00%	5.00%	5.00%
5	.00%	10.00%	5.00%
10	.00%	15.00%	5.00%
15	.00%	20.00%	5.00%
20	.00%	25.00%	5.00%

For example, using a **Linear Cost curve**, with a Start Date of 05/12/2020, the Forecast Remaining cost is \$3,000,000.00, with a Phased forecast remaining cost delta of \$0. This means that you are forecasting to spend \$3,000,000.00, and your Phased Forecast Remaining Delta is zero because your Time Phased Forecast is now fully met (you have fully forecasted \$3,000.000.00).

CE po	Descript	WE phi =	Start	Finish	Cost curv =	Fo me	Forecast remainin = cost	Forecast	Phased forecast remaining cost delta	-
3	Concrete	1071	05/12/2020	10/26/2020	Linear	Curr	\$ 3,000,000.00	\$ 3,000,000.00		\$ 0.00

Since your scheduled **Start** date is 05/12/2020, the system will start forecasting money on this cost item in May. Based on the Linear Cost curve and the fiscal calendar it will stop forecasting money in October 2020. This is based off your scheduled **Finish** date of 10/26/2020. Over the period of 6 months, your spend is totaling 3,000.000.00.

May '20 cost	Jun '20 cost	Jul '20 cost	Aug '20 cost	Sep '20 cost	Oct '20 cost
\$ 339,285.71	\$ 500,000.00	\$ 500,000.00	\$ 625,000.00	\$ 500,000.00	\$ 535,714.29

6.6.6 Time Phased Forecast Prerequisites

There are certain **requirements** for a cost item to be eligible for time phased forecasting.

- 1. The Schedule data block must have a Start and Finish date.
- 2. The Schedule data block must have a Cost curve association.

6.6.7 Time Phased Forecast View

You may want to create a View in your Control Workspace similar to this one showing a Time Phased Forecast in comparison with the Live forecast. This shows the hours you are forecasting to spend money (TPF) vs. the Live forecast.

Tas	ks			TPF		- 6	∋ <•>		O 08/07/2019	🚖 Live foreca	st This Month		< ••••••

	2	Earthwork	1069	11/	05/11/2020	Lin	Curr	\$ 800,000.00	\$ 800,000.00			\$ 0.00	\$ 0.00	\$ 0.00	\$ 0.00	
	3	Concrete	1071	05/	10/26/2020	Lin 🛆	Curr	\$ 3,000,000.00	\$ 3,000,000.00			\$ 0.00	\$ 0.00	\$ 0.00 •	\$ 0.00	
	4.1	Erect Steel	1074			Lin	Curr	\$ 800,000.00	\$ 800,000.00			\$ 0.00	\$ 0.00	\$ 0.00	\$ 0.00	
	4.2	Erect Steel	1005			Lin	Curr_	\$ 200,000.00	\$ 200,000.00			\$ 0.00	\$ 0.00	\$ 0.00	\$ 0.00	

3. For one of your cost items, type in **\$500** in one of the monthly bucket fields.

Ŧ	Feb '20 cost	Mar '20 cost	Apr '20 cost
\$ 0.00	\$ 0.00	\$ 0.00	\$ 0.00
147,619.05	\$ 147,619.05	\$ 138,095.24	\$ 147,619.05
\$ 0.00	\$ 0.00	\$ 500.00 •	\$ 0.00
\$ 0.00	\$ 0.00	\$ 0.00	\$ 0.00

• Notice how the field now has a blue circle next to the \$500.00. If you hover over it, you see the value before, after, and the date the change was made

Manual O	verride:	
Change d	by: paul trippi ate: 08/06/2019 08:25 AM ore: \$ 0.00	-

• Because of the manual adjustment, a warning sign appears on the Cost curve for this cost item. The cost curve is not being changed to manual, but the system records that this cost item is no longer linear, because it has been overridden

CE po =	Descript	WI ph co	Sti	Finish	Cost curve 🚽
1	Job Overhead	1002	06/	11/25/2019	Linear
2	Earthwork	1069	11/	05/11/2020	Linear
3	Concrete	1071	05/	10/26/2020	Linear 📐

- The override made to this cost item is no longer needed, and you now decide you want to **revert** to its original setting, and have the system Auto distribute the forecast
- 4. Make sure your cost item is checked, then select the **Auto distribute** icon.

	CBS	> Time Pha	sed Foreca				
0) (remaining fored I start/end dates			
1	CE po 📃	Descrip		Start	Finish	Cost curve	
•	3	Concrete	1071	05/12/2020	10/26/2020	Linear	

- This action will revert the time phase values back to the same numbers as they were prior to any manual adjustments, plus:
 - a. It will erase any manual adjustments
 - b. It will distribute the remaining forecast values based on cost curve and start/end dates of that specific cost item, as determined by the fiscal calendar
- The result of selecting the Auto distribute icon starts its forecasting spread on the cost item's **Start** date of 05/12/20, and will **Finish** its schedule on 10/26/20

NOTE It is important to remember the purpose of utilizing Time Phase Forecasting is to see how you are forecasting to spend money over a period of time. The expectation is to get the forecast adjusted to where it should be, and update costs as needed.

6.6.8 Time Phased Forecast Microsoft Excel import

You can import a Microsoft Excel file to update the values in Time Phased Forecast by selecting **Import** on the Time Phased Forecast page to download the time phased template. To import time phased forecast values, you can download a template as shown in number 2 in the image below to use as a guide to import your new time phased forecast values. The same format provided in the download template is required for the import to be successful.

		<u>v 23.12</u>			INEIGHT®				

The Excel file includes the cost items that are in your current Time Phased Forecast view. Columns in orange are required, columns in yellow are optional to change, and columns in grey are ignored and cannot be changed. When you are finished making your Excel changes, you can then import the Excel file into Control to update the Time Phased Forecast with your new values. Column header names are ignored if changed.

6.6.9 Column Chooser

When you open the Time phase forecast, a column chooser has been added to the grid.

Available columns		Selected columns		
Search Q		Search	Q,	
Account code	→	CBS position	- 1	
Actual finish		Description		
Actual start	3	WBS phase code		
Allow as-built		Start		
As-built lock		Finish		
CBS contribute quantity		Forecast method		
CBS tag 1		Cost curve		
CBS tag 10		Forecast remaining cost		
CBS tag 11		Forecast remaining man hour		
CBS tag 12	-	Qty remaining	-	

After you choose which columns to show, the left side of the grid updates with your selection.

On the right of the grid, you can also adjust your view for each month's Cost, Man hours, and Quantity. This can be done using the drop down next to the month and deselecting the options you do not want to see on your grid.

View Cost Mhrs Cost Cost 0.00 \$ 2,542.37 0.00 Cost 0.00 \$ 5,322.80 532.28 0.00 \$ 0.00 \$ 0.00 0.00 Man hours 0.00 \$ 0.00 0.00	ty
-0.26 \$ 2,542.37 0.00 Cost 0.00 \$ 5,322.80 532.28 0.00 \$ 0.00 0.00	
0.00 \$ 0.00 0.00	
C Mag baurs	
Man hours 0.00 \$0.00 0.00	
Quantity 0.26 \$ 2,542.37 25.42	
Quantity 0.26 \$2,542.37 25.42	

NOTE

If you select cost from past dates, the data is read only.

6.6.10 Audit Log

All changes made within TPF are captured in the Audit log within Control Workspaces. The Audit log captures changes based on any changes made to a forecasted CBS item.

In the example, it shows that a forecasting value was changed on 08/13/19 for Audit ID 232. The forecasting value had been changed from 89.36 to 100.00 for the Aug '10 remaining cost time period.

CBS	Audir ID =	Data type	ltem type -	Descripti	WBS	Attribute	Change by =	Changed date	Value before	Value after =

6.7 PUSH TO LIVE FORECASTS

As mentioned above, the Live Forecast is the official forecast used for financial reporting and shared with all members of the project.

You can push forecasts entered in the Forecast data block to the Live Forecast either individually or by selection. This allows you to send only the items that you choose from your forecast to the Live Forecast.

The Live Forecast can only be updated if the user is assigned the appropriate role with the associated permissions. Project Admin or Power User can edit the Live Forecast directly.

NOTE Forecast changes made in the Forecast data block WILL NOT be pushed to the Live Forecast without an additional action detailed in the Step by Step below.

Changes made to your Forecast are only seen by you, unless you share them with someone else (see topic 9.4 Forecast Management) or update them to the Live Forecast.

Push Live Forecast by Selection in the CBS Tab

- 1. From the CBS tab with the Forecast data block in the view, select a group of cost items, by clicking the row header check boxes.
- 2. Click on the **drop-down arrow** in the center of the Forecast data block.
- 3. Select **Push to Live Forecast**.

NOTE The Push to Live Forecast option is disabled until you select one or more cost items.

4. After review, select **Yes** and your forecast values will push to the Live Forecast.

6.7.1 Time phased forecast push to live

The time phased forecast feature lets you make edits in your time phased forecast. You are then able to push those edits to your live forecast.

You can edit your total forecast remaining cost and forecast remaining hour values in the Time phased forecast window. It would then override your forecast remaining cost and your forecast remaining man hour if there is a change.

The Time phasing Forecasting option must be enabled first in order to have the Push Time phased forecast to Live option available to be enabled. Enabling only the Forecasting option does not automatically enable both.

Time phasing		
Enable time phasing for the following	p.	
Forecasting (Budget (j)	\odot
Push Time phased forecast to Live forecast	() () ()	
Forecast		
% Complete value at which delta from straight line average performance	e calculation utilizes	
6		

The Time phasing section can be located in the Project Settings of Control under the Project tracking tab.

When you have enabled both options under the Time phasing section click save. Then go back to the CBS tab.

Follow these step by steps to use a time phased forecast push to live.

Time phased forecast push to live forecast

1. Select cost items from the CBS tab with a **Forecast remaining cost** to use in the push to live feature.

Make sure the cost items you selected have start and end dates. Otherwise you cannot edit them in the Time phased forecasting window.

- 2. From Control's CBS tab, select the Actions tab. Then select the **Time phased forecasting** option.
- 3. In the third data block where it has the Month and Year, scroll to the Remaining cost. Now move the scroll bar over to January of 2021.

0	BS > Time p	hased forecasting														
														٥	Publish	1
	CBS position	Description	-	Forecast remain_	Forecast		Qty remaining	Phased				r 2020 🔻				
	position		÷ .	cost	man hour			forecast remaining	Remaining c	Mhrs	1	Remaining m	Qty		Remaining qty	
)	1.2	Fiber optic cable-1		\$ 5,000.00		0.00	10,000.00		\$ 5,000.00			0.00			10,000.00	
									\$ 318.77			0.00			1.28	

		January	2021 🔻					Februar
ining qty	Cost	Mhrs		Qty		Cost	100	Mhrs

1.28	\$ 36	6.00	0.00		1.46		\$ 402.01	

4. If you believe the line item could take up more time and money, you can adjust the Cost and Man hours for the following month. These changes will then be added to the phased forecast remaining columns once you push to live.

	Phased	Phased	Phased forecast				January 2021 🔻			Februar
	forecast remaining	forecast remaining	forecast remaining qty	ining qty	Cost	1	Mhrs	Qty	Cost	Mhrs
,000.00	\$ 1,000.00	100.00	0.00	10,000.00		\$ 1,000.00 🔹	100.00	0.00	\$ 0.00	-
6.00	(\$ 0.00)	0.00	0.00	1.28		\$ 366.00	0.00	1.46	\$ 402.01	

NOTE Quantity will show as changed with a delta next to the column. Currently, you cannot push quantity updates to live.

5. When you have made all the changes you need, select the cost items you want to push to live. You can either select one or all.

CE		hased forecasting															
88	CBS	Description	na	Phaseo	d	Phased		Phased						ebruary 2021 👻	o (9	Publish

6.8 FISCAL CALENDAR

InEight Control has built in settings that automatically set the actuals in the forecasting-related data blocks to match your company's month end calendar. This allows you to hold the actuals at a certain cutoff date to allow for forecasting to be done based on month end actuals.

PROJECT INFORMATION	FISUAL	CALENDAR	FUEL TYPES	CUSTOM LIST FIELDS
				Cancel Sav
* Week ending day		* Financial year start month		
Tuesday	•	April	-	
Period end				
* Month end day		Last weekday		
	*		-	
		Month end plus days		
Same as Month End Day	*			
 Financial period closing time 		Closing time zone		
	G		S and Canada) 👻	
	Period end • Month end day 16 • Financial period closing day Same as Month End Day • Financial period closing time	Tuesday • Period end • • Month end day • 16 • • Financial period closing day • • Financial period closing time •	Tuesday April Period end • Month end day Last weekday 16 • Financial period closing day Month end plus days Same as Month End Day • Financial period closing time • Closing time zone	Tuesday April Period end • Month end day 16 • Financial period closing day Same as Month End Day • Financial period closing time • Closing time zone

These fiscal calendar settings include a suspended period for you to finalize your forecast numbers without incurring any new actuals.

Month end day		Last weekday	
Last day of the month	•	Select one	
Financial period closing day		* Month end plus days	
Same as Month End Plus Days	•		ł
Financial period closing time		* Closing time zone	
:30	6	(UTC-06:00) Central Time (US and Canada)	

During this suspended period, your numbers are "frozen", allowing you to finish month end reporting without worrying about the numbers changing. Any new actuals accumulated during the suspended period will populate once the suspended period is over.

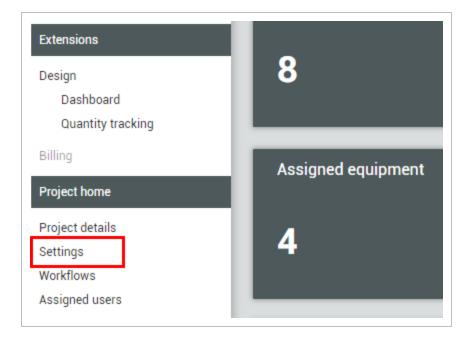

You will note that the Live forecast data block contains a label in its header called "This Month".

🖈 Live forecast	This Month	
Forecast Final Labor Total Cost \Xi	Forecast Final Cost	Forecast Final MH
\$250,000.00	\$250,000.0	00
\$400.000.00	\$400.000.0	10 8 OC

This label reminds you that the values in the live forecast data block are only for the current month, as defined in the Organization Settings under Fiscal Calendar (see *Lesson 3 – Project Setup*).

View Fiscal Calendar Settings

1. From the Project home page of the **your job**, select **Settings** from the left side menu.

- You can also access settings from the first-level menu or by clicking on the View project settings tile on the home page
- 2. On the resulting Project Settings page, click on the **Fiscal Calendar** tab.

GLIBAL OFTICAL HOME PAGE		FISCAL CALINDAR FUEL THREE CUSTOM LISTS			MDN: 9710M	
· Next endrop for			- Financial plan start month			

In this section, you can define the following fields (if you have the appropriate access):

Field Name	Purpose
Week ending day	Determines which day of the week is the last day.
Financial year start month	Allows the financial year-end to be different from the calendar year- end.
Month end day	Determines what the last day of the month is.
Last weekday	Sets the day for the above setting.
Financial period closing day	Allows you to set the financial period to end on the same day or allow a period to close out the finances.
Month end plus days	Sets how many closing days.
Financial period closing time	Establishes the time when the Forecast data block actuals will be reset to the next period.
Closing time zone	Sets the closing time zone.

6.8.1 Forecast Equation Updates to Current

The actual numbers claimed are periodically synced. The date of actuals which apply to your forecast can be seen in the Data Block Header.

Forecast	Crea	ted from Live fore	c 🍷 🔁		< ••• >			Ø 07/09/2018	
Forecast final cost	Ŧ	Forecast final MHrs	Forecast final man hours/Unit	Ŧ	Forecast final productivit	-	Forecast final unit cost	 Forecast method	-

NOTE The fiscal settings in Platform determine when actuals for the period will be synced.

6.9 LIVE FORECAST SNAPSHOTS

When you sync your live forecast, Control creates a snapshot. After that sync has been completed, everything in your live forecast is captured and saved in a snapshot for that month. As soon as the month ends, the most recently synced items in the live forecast, is your snapshot for the month.

In the live forecast column, select the drop-down menu to show the live forecast snapshots. The snapshots saved are labeled with the month and year they were created.

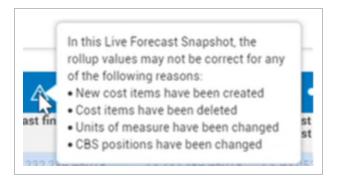

Current live forecast
* Current live forecast
January 2021
December 2020
November 2020

You can view the current live forecast for the month. For existing projects, cannot snapshot previous months.

For example, if you select a previous snapshot such as January, it loads into your live forecast. You can put in any columns you want to organize the view. If you do have a column in your view that is not a live forecast type (such as open/remaining committed cost and total committed cost), those columns show as blank and disabled. This occurs because the snapshots only capture the live forecast values.

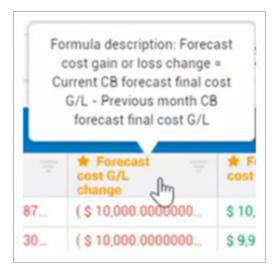

Open committed cost	Total committed cost	Forecast method
		Rollup
		Rollup
		Rollup
		Manual (ETC)
		Manual (ETC)
		Manual (ETC)
		Current estimate
		Manual (ETC)

All columns from past live forecast snapshots are read-only. You cannot change anything that has been calculated in the past snapshots. A warning icon with a tool tip also appears in the column header. Hover over it to show the warnings.

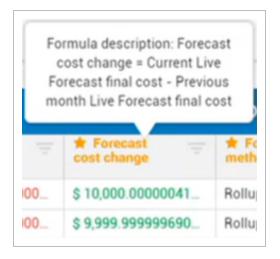

When you load an old snapshot, the CBS hierarchy does not rearrange to show how the live forecast previously looked when that snapshot was taken.

The Forecast cost G/L change column shows you what has changed between last month and this month for your gain loss values.

The Forecast cost change column calculates the difference between the Forecast final cost and the previous month's Live Forecast final cost.

Green coloring for the numbers indicates an increase in forecast cost change between the two months.

Exercise 6.1 — Forecasting

Now that you have covered all the functions of forecasting, it is time to perform your own forecasts. Utilizing the forecasting methods you have learned, practice creating forecasts as indicated below. You can use your own project (if available) or the training project used in this lesson.

- 1. From the Control main page, select the **CBS** tab.
- 2. Change to a view that contains the **Forecasts** data block.
- 3. Save a new forecast.
- 4. Update the forecasts of cost items of your choice to practice using each of the following Forecast Methods:
 - Current Budget
 - Average Performance
 - Manual EAC (based on costs or hours)
- 5. Send your forecast to a person.
- 6. Note the differences.

Congratulations, you have completed this exercise!

Review

- 1. How is the Current Budget Forecast Method calculated?
 - a. Forecast Total Cost = Current Budget
 - Forecast Total Cost = As-built Total Cost + (Current Budget Unit Rate * Current Budget Remaining Qty)
 - C. Forecast Total Cost = As-built Total Cost + (Current Budget Unit Rate * Current Estimate Remaining Quantity)
- 2. How does the Live Forecast receive updates?
 - a. They happen automatically
 - b. Push to live forecast from the Forecast data block title bar drop-down
 - C. Push to Live Forecast from the Actions drop-down menu
 - d. Viewed in the CBS change log
- 3. Who can a forecast be sent to?
 - a. Project Manager
 - b. Project Engineer
 - C. It automatically goes to everyone
 - d. Anyone you add to the list
- 4. Which data block do you use to compare forecasts?
 - a. Forecast
 - b. Forecast Delta
 - C. Forecast Comparison
 - d. Live Forecast
- 5. The fiscal calendar settings for Live Forecast are located under:
 - a. Organizational Breakdown Structure
 - b. Account code structure

- c. Operational resources
- d. Project settings

Summary

As a result of this lesson, you can:

- Differentiate and utilize InEight forecasting methods
- Manage forecasts
- Manage Time Phased Forecasting
- Push to Live Forecast
- View the Fiscal Calendar settings

This page intentionally left blank.

CHANGE MANAGEMENT

Lesson Duration: 45 minutes

Lesson Objectives

After completing this lesson, you will be able to:

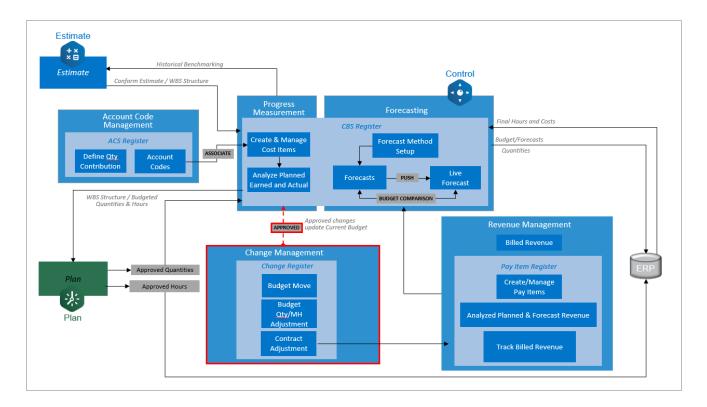

- Explain the change management process
- Complete a cost budget move
- Complete a quantity budget move
- Complete a man-hour adjustment
- Create an adjustment to the contract
- Describe the change order approval process

Lesson Topics

7.1 InEight Control Workflow - Change Management	307
7.2 Change Management Overview	307
7.3 Associated Budget Move (Net Zero Dollar Move)	308
7.3.1 Budget Move with a Single Cost Item	315
7.3.2 Net Zero Budget Move from Change	319
7.4 Non-Associated Budget Move	320
7.4.1 Non-Associated Budget Move Prerequisites	321
7.4.2 Manual Total Cost Budget Move	322
7.4.3 Manual Cost Category Budget Move	324
7.4.4 Budget Move Approve/Submit	326

7.1 INEIGHT CONTROL WORKFLOW - CHANGE MANAGEMENT

7.2 CHANGE MANAGEMENT OVERVIEW

Changes can happen during all phases of a project. There will likely be modifications to quantities, design, schedule, and/or cost. You will need to manage changes that have been identified and determined to have an impact to the project. It is also vital that you have a way to compare the project from its original plan with all the changes that have affected the project.

For your sample project the **Steel Structure Training Job**, you will perform three different types of changes to the budget:

• Budget Move (Net Zero Dollar Move)

Options:

1. Associated Budget Move – define budget moves with a From and To process to provide ultimate traceability of budget moves.

- 2. Non Associated Budget Move define budget moves freely to provide the most flexibility. A quicker way to perform a budget move.
 - Budgeted dollars are moved from one cost item to another, without changing the overall budgeted price
 - ° Can change MH/QTY and Unit Costs of the cost item
- Quantity or Man-Hour Adjustment
 - Adjust values for quantities or man-hours applied to a single cost item
 - Can change MH/QTY and Unit Costs of the cost item
- Contract Quantity Adjustment
 - Adjust budget to capture changes in work scope (quantity)
 - Adjust dollars from existing or new pay items
 - Allows "locking" of Total Price, Unit Price, or Pay Quantity

When you perform a budget move, contract adjustment, or budget quantity and man hour adjustment, you can select a maximum total of 250 cost items or 100 pay items. When you exceed the maximum, the **Budget move and contract adjustment** option in the Actions menu drop-down becomes unavailable. This improves the speed, reliability, and performance of the change order.

7.3 ASSOCIATED BUDGET MOVE (NET ZERO DOLLAR MOVE)

During a project, you may encounter changes that result in a budget move which adds no additional budget to the total project budget. For example, you may decide to change the means and methods for completing an operation which results in moving budget from one operation to another. Performing a budget move allows you to accurately track budget changes to maintain a clear history and ensure costs moving forward are accurate.

Scenario

In the example structural steel scenario, the Original Budget for **Erect Steel – Light** that was initially carried from Estimate to Control has been found to be in excess, and a portion of this budget's dollar value needs to be moved to your newly created cost item, **Module [your User ID#]** - **Erect Steel Heavy**.

It is important to remember that Current Budget cost and man-hours are only maintained at the terminal level, and you cannot move cost to/from a parent cost item. You can move dollar values between multiple cost items at the same time.

InEight Control contains a Budget Move Wizard that walks you through the following steps for performing a budget move:

- 1. Select From & To Items
- 2. Define Relationships
- 3. Assign Amounts
- 4. Adjust Cost Categories
- 5. Summary (submit to pending)

The following Step by Step walks you through how to perform a net zero-dollar Budget Move in the tool.

Perform a Net Zero Dollar Associated Budget Move

1. Hover over the Actions drop-down menu, hover over Budget move & contract adjustment, then select Budget move.

	Actions 👻 🕂 🗹	\otimes		
7	Global forecast method		:	Tas

	3ack

- The Assign Amounts window appears
- From this window, you will assign amounts to be moved from one cost item to the other
- The CB Total Cost and CB Total MH values entered under the To: section automatically deduct from the equivalent fields in the From: section
- CB Total Quantity values entered under the To: section do NOT automatically deduct from the From: section because you could be moving between cost items with differing units of measure
- NOTE You have the option to either manually or automatically deduct the CB-Total MH. If you select "Advanced options" you can specify whether man-hours automatically deduct or not.
- 12. In the To: section of the window, enter **10,000** in the CB-Total Cost field.
- 13. In the To: CB-Total MHrs, enter 100.00.
- 14. In the To: CB-Total Quantity enter **20.00**.
 - Note that the equivalent costs and man-hours deduct automatically from Erect Steel Light, but NOT the CB Total Qty
- 15. Enter -20.00 in the From: CB Total Qty field.

• This budget move is now listed in the project's Change Register with a status of Pending

Later in this lesson, you will learn how to approve and modify budget changes from the Change Register. These changes will not reflect in the Current Budget until the contract adjustment is approved.

7.3.1 Budget Move with a Single Cost Item

In other times during your project, you will encounter changes that have the potential to cause a move in your budget within the cost categories of a specific cost item. For example, you may find that some items that you estimated to be self-performed work may be faster and cheaper if they were subcontracted out. Therefore, you can perform a budget move for a single cost item and redistribute the budgeted cost between different cost categories.

Scenario

In the example structural steel scenario, the Original Budget for a cost item needs to be moved from the Labor cost category to the Subcontract cost category. This estimated self-performed work will now be subcontracted work because this cost item is not our specialty and it would take us longer and be more expensive for us to self-perform this work rather than a specialty subcontractor whom is faster and cheaper. The following Step by Step walks you through how to perform a 1:1 Budget move within a single cost item in the tool.

Perform a Budget Move within a Single Cost Item

1. Select the Actions drop-down menu, hover over Budget move & contract adjustment, then select Budget move.

7.4 NON-ASSOCIATED BUDGET MOVE

The Non-Associated Budget move is a quicker way to complete a budget move compared to the Associated Budget move type. Within the Budget Move screen, the Non-Associated method consists of a two-step process, as compared to the six-step process within the Associated method. The two steps in the Non-Associated method are the Details and Assign Amounts steps.

	1 Details 2 Assign Amounts
Choose	your Budget move workflow
0 1	Associated Define budget moves with a from and To process to provide ultimate traceability of budget moves.
	Non-Associated Define budget moves freely to provide the most flexibility.

7.4.1 Non-Associated Budget Move Prerequisites

Prior to performing a budget move, you can change the Current Estimate (CE) to what you want your Total budget to be. Then, you can go into your budget move and match the Current Budget (CB) to the CE. This can be accomplished by using the auto calculate icon in the Budget Move Screen, which is discussed later in this topic.

Within the CBS, you can edit the CE fields directly within the CBS grids. You can also navigate into the cost item's cost categories to make the adjustments. This is not a required prerequisite, but a **best practice**. Depending on the contract type it is often ideal to have the Current Estimate equal the Current Budget.

In the CBS, the 2 columns that should match are the CB total cost and CE final cost.

					CBS		ACS	P/	VY ITEMS	CHANGE REGISTER		AUDIT LOG		
ons	• +	\bowtie												
Tasl	ks		:	current estima	te		<	••• >			:	Current budget		
	[⊗] CBS -	Description		econdary UoM	-	CE final MHrs	CE Mhrs/Unit	CE Units/MHr 1 =	CE final unit	CE final cost		CB total cost	CB total quantity	-
	5.2	Concrete - Materia				0.0	10 0.0	0 0.00	\$ 100.00	\$ 1,000,000.00		\$ 1,000,000.00		10,000
	5.1	Earthwork - Materi				0.0	0.0	0 0.00	\$ 25.00	\$ 250,000.00		\$ 250,000.00		10,000
	5.3	Structure Steel				0.0	0.0	0.00	\$ 500.00	\$ 500,000.00		\$ 500,000.00		1,000

If you know that a change order is on its way, you can modify the CE to accommodate for the incoming budget adjustment.

7.4.1.1 Auto Calculate icon

Cost Item Management lesson

CBS position	Assign cc
	Auto calculate Match current budget values with current estimate values
	 Select all
	Cost
	Quantity
	 Man hours
	Cancel Apply

Set up the CE values in the CBS before entering a contract adjustment/budget move, then select the icon and in the dialog and choose whether you want to update the Adjusted CB cost, man hours, and/or quantity, and then select **Apply**.

This updates the Adjusted CB total cost and/or Adjusted CB total Mhrs and/or Adjusted CB total qty to match the corresponding Current estimate values.

You can only use the auto-calculate icon to impact budget (after already setting up your current estimate values/forecast).

TIP You cannot edit any of the CB values.

7.4.2 Manual Total Cost Budget Move

After selecting the Non-Associated budget move option, then clicking on Next, the Budget Move screen appears. From this screen you have the option of moving the Current Budget from one cost item to another. You can also move cost from one cost item to multiple cost items. When first entering the Budget Move screen, any of the blank 'Adjusted CB' related fields are editable fields.

In the below example, under Adjusted CB total cost, \$5,000 is about to be moved from cost item 5.1 into cost item 5.3. This can be done by manually entering a negative \$5,000 in the Adjust CB total cost for cost item 5.1, then entering in a positive \$5,000 for cost item 5.3. With the appropriate permissions, you have the option to either Approve or Submit this budget move. You can also Cancel, save as a Draft, or select Back to take you to the previous screen.

The subtotal at the bottom shows the Adjusted CB total cost at \$0. This is because we are removing and adding the same amount of dollars from one cost item into another.

	CBS position	Description	WBS phase =	CB total cost	Adjusted CB total cost	CE total cost	CB total MHrs	Adjusted CB total MHrs	CB total quantity
	5.1	Earthwork - Materials	1085	\$ 250,000.00	(\$ 5,000.00)	\$ 250,000.00	0.00		10,000
	5.2	Concrete - Materials	1086	\$ 1,000,000.00		\$ 1,000,000.00	0.00		10,000
	5.3	Structure Steel - Materi	1087	\$ 500,000.00	\$ 5,000.00	\$ 500,000.00	0.00		1,000
ubtot	als 3			\$ 1,750,000.00	\$ 0.00	\$ 1,750,000.00	0.00	0.00	

In the below example, the Approve and Submit icons are disabled. This is because an adjustment is being made to one cost item for \$-5,000, but there hasn't been an adjustment made to other cost item (s) for \$+5000. Once the adjustment has been made to add \$5,000 to a cost item, the Approve and Submit icons will be enabled. The Adjusted CB total cost must equal zero on the Subtotals line.

Ð				1 Details 2	Assign Amounts			\$ 1	= 🗗
	CBS position	Description	WBS phase code	Adjusted CB labor total cost	Adjusted CB total cost	CB total cost	CE total cost	CB labor total cost	CB total
	5.1	Earthwork - Materials	1085	\$ 189.46	(\$ 5,000.00)	\$ 235,875.52	\$ 247,000.00	(\$ 8,937.76)	
	5.2	Concrete - Materials	1086			\$ 1,009,000.00	\$ 1,009,000.00	\$ 1,009,000.00	
	5.3	Structure Steel - Materi	1087			\$ 500,000.00	\$ 500,000.00	\$ 0.00	
ibto	tals 3			\$ 189.46	(\$ 5,000.00)	\$ 1,744,875.52	\$ 1,756,000.00	\$ 1,000,062.24	
A	pprove	۱		'Submit icons disa sted CB total cost		Ca	ncel Draft	Back	Submit

It's also possible to spread the Adjusted CB total cost amongst several cost items. In this example, \$5,000 is being taken from cost item 5.1, cost item 5.2 is adding \$3,000, and cost item 5.3 is adding \$2000. Both the Approve and Submit icons are enabled because the entire \$5,000 is being taken from cost item 5.1 and allocated to other cost items. If the \$5,000 were to be allocated disproportionally, then both the Approve and Submit icons would be disabled.

Ð						2 Assign Amounts				\$ t≣ ⊡
	CBS position	Description	WBS phase code	Ŧ	CB total cost	Adjusted CB total cost	CE total cost	CB total MHrs	Adjusted CB total MHrs	CB total quantity

	5.2	Concrete - Materials	1086		\$ 1,000,000.00	\$ 3,000.00	\$ 1,000,000.00	0.00		10,000.
	5.3	Structure Steel - Materi	1087		\$ 500,000.00	\$ 2,000.00	\$ 500,000.00	0.00		1,000.
tot	als 3 (1 rows selected)				\$ 1,750,000.00	\$ 0.00	\$ 1,750,000.00	0.00	0.00	

7.4.3 Manual Cost Category Budget Move

Within the budget move screen, you also have the option of editing a cost item at the Cost category level by right clicking on a cost item.

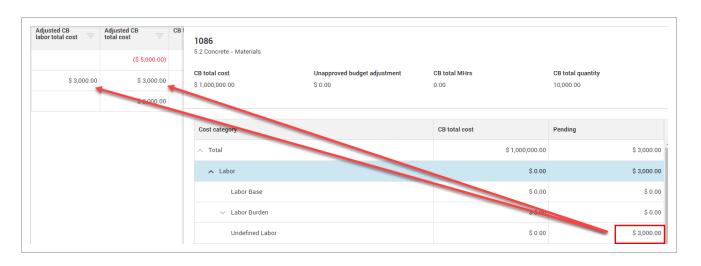

Jnan	ge Register > Budget Move					
+				1 Details	2 Assign Amounts	í
	CBS position	Description	WBS phase code	CB total cost	Adjusted CB total cost	CE total cost
	5.1	Earthwork - Materials	1085	\$ 250,000.00	(\$ 5,000.00)	\$ 250,000.0
√	5.2	Concrete - Materials	1086	\$ 1,000,000.00	\$ 2 000 00	onu,000.0 Cost category
	5.3	Structure Steel - Materi	1087	\$ 500,000.00	\$ 2,000.00	

After selecting Cost category, a grid displays with the cost item's cost categories, much like it shows in the CBS. You have the option to move the \$3,000 from the Materials cost category to a different Cost category, such as Labor.

Details 2 Assign Amou	nts		\$ ‡≡
1086 5.2 Concrete - Materials			
CB total cost	Unapproved budget adjustment	CB total MHrs	CB total quantity
\$ 1,000,000.00	\$ 0.00	0.00	10,000.00
Cost category		CB total cost	Pending
∧ Total		\$ 1,000,000.00	\$ 3,000.
∨ Labor		\$ 0.00	\$ 0.
\checkmark Construction Equipm	nent	\$ 0.00	\$ 0.
FOM Rented Equipm	ent	\$ 0.00	\$ 0.
✓ Supplies		\$ 0.00	\$ 0.
✓ Materials		\$ 1,000,000.00	\$ 3,000.
 ✓ Subcontract 		\$ 0.00	\$ 0.
∨ Fees		\$ 0.00	\$ 0.
\sim Allowance		\$ 0.00	\$ 0.
G & A		\$ 0.00	\$ 0.
Undefined		\$ 0.00	\$ 0.
	Totals	\$ 1,000,000.00	\$ 3,000.

Not only has the \$3,000 moved from Materials to Undefined Labor, but the Adjusted CB total cost and Adjusted CB labor total cost remains at \$3,000 for this cost item.

Alternatively, you have the option of first populating the Cost categories with values, as opposed to entering values directly in the Budget Move screen.

7.4.4 Budget Move Approve/Submit

After making the desired budget moves, you can select the Approve icon with the appropriate permissions. After approval, a toast message appears at the top of the screen confirming that the budget move is approved.

The system then automatically takes you to the Change Register, where you can see the approved budget move record.

There is also an option to select the Submit icon from the Budget Move screen, which will place the budget move into a Pending status in the Change Register.

7.4.5 Budget Move Change Register

After approving or submitting a budget move, you are now in the Change Register. The Non-Associated budget move that was just approved in the Budget Move screen, is now in Approved status.

Scenario

In this scenario, you need to move \$1,000 from the Current budget from one cost item's budget to another cost item's budget, in a timely manner. To save time, you need to approve the budget more quickly, as you also have the appropriate permissions to perform this task.

Perform a Non-Associated Budget Move

- 1. Select two cost items from the CBS.
- 2. Select the **Actions** drop-down menu, hover over budget move and contract adjustment, then select **Budget move**.
- 3. Select the Non-associated radio button.
- 4. Name the Issue #.
- 5. Click Next.
- 6. Enter a dollar value for the first cost item by double-clicking in the Adjusted CB total field.
- 7. Enter a negative dollar value for the second cost item by double-clicking in the Adjusted CB total cost field.
- 8. Click Submit.

7.5 BUDGET QUANTITY / MAN-HOUR ADJUSTMENT

During the course of a project, it is typical to have scope modifications that warrant changes to quantities and/or labor hours.

It is important to remember that changing man-hours or quantities will affect budgeted values of MH/QTY, QTY/MH, and Unit-Costs, but will not change the overall dollar value of your budget.

InEight Control contains a Budget Quantity / Man-Hour Adjustment Wizard that walks you through the following steps for performing a quantity and/or man-hour adjustment:

- 1. Select Items
- 2. Assign Amounts (quantities, man-hours, or both)
- 3. Summary (submit to pending)

The following Step by Step walks you through the process for performing a budget quantity adjustment:

Perform a Budget Quantity / Man-Hour Adjustment

1. Select the Actions drop-down menu, hover over Budget move & contract adjustment, then click Budget quantity & Man hour adjustment.

	Actions 👻 (+) 🗹 🔇)		
7	Global forecast method		:	Та

Pending:		0.00			5,000.0
After:		No change			5,000.0
		(Cancel Draft	Back	Submit

 This budget move is now listed in the project's Change Register with a status of Pending

Later in this lesson, you will learn how to approve and modify budget changes from the Change Register.

7.6 CONTRACT ADJUSTMENT

A contract adjustment, often referred to as a Change Order, represents a change to the total project budget. If you are a contractor this also results in a change to total contract price.

7.6.1 Pay Item vs. Cost Item

Contract adjustments involve changes to both your contract price (pay items) and your budget (cost items). To avoid confusion, the following table reviews the purpose and function of pay items and cost items.

Term	Function
Pay Item	For contractors, this represents a project deliverable, including the pay quantity defined by the owner and the contracted unit price you will be paid for completion of the work. Pay item prices include your overhead and profit.
	For owners, this feature can be used in a variety of ways or may even be ignored. One way it can be used is to represent funding sources and total funded amounts. It can also be used to bill internal or external partners.
Cost Item	The individual cost-related activities required to complete the deliverables of the project. Cost items represent the costs you budget to complete the work and therefore do not include profit.

InEight Control contains a Contract Adjustment Wizard that walks you through the following steps for performing a contract adjustment:

- 1. Select Pay Items (or create new)
- 2. Adjust Pay Item
- 3. Select CBS Items
- 4. Assign Amounts
- 5. Adjust Cost Categories
- 6. Submit (to pending)

The following Step by Step guides you through the creation of a pay item contract adjustment.

Pay Item Contract Adjustment

- 1. Select the Actions drop-down menu, hover over Budget move and contract adjustment, then click Contract Adjustment.
- 2. Select Start with pay items.
- 3. Type a number in the **Issue #** text box.
- 4. Type the same number in the CCO (Contract Change Order) text box.
- 5. Enter a **Description** in the Description text box.
- 6. Click Next.
- 7. On the Select Pay Items screen, select the desired pay items.
- 8. Click Next.
- 9. Enter the appropriate values on the Adjust Pay Item screen.
- 10. Click Next.
- 11. On the Select SBS items screen, select the desired cost items.
- 12. Click Next.
- 13. On the Assign Amounts screen, enter the desired values in the MHrs and Total quantity fields.
- 14. Click **Next** to get to the Summary step 8.
- 15. Review your entries, select the **Back** button as needed to make any corrections.
- 16. Click Submit.

7.6.1.1 View list of pay items

You can see a list of pay items already created in a contract adjustment.

When creating a pay item in a Contract adjustment, you can now see a list of previously created pay items in Control > Workspaces > Actions > Budget move and contract adjustment > Contract Adjustment > Pay items > Create a new pay item > **Pay item number**, instead of needing to navigate to the pay item's register.

Pay item number 🖸 Pay item number		ne number 48	Sales order
Description Description	List of pay items		×
	Pay item number	Description	
•UoM (Unit of measure)	01	Engineering	^ (O) q
	02	Mobilization & Demobilization	
	03	Building Permits-Hwy, Etc	
Current price	04	Stormwater Management Permits	
	05	Procurement - Racking Foundations	
	06	Procurement - Racking System	
	07	Procurement - Combiner Boxes/Disconnec	ts
	08	Procurement - DC Collection Cable	
	09	Procurement - AC Collection Cable	
	10	Procurement - SCADA Equipment	
	11	Procurement - Security System Equipment	
	12	Procurement - MET Stations	
	13	Procurement Other Electrical Materiale	•

The list helps you keep any current number and description formatting to follow the next consecutive number, or description scheme.

You can also see the pay items that are awaiting approval.

Change register Contract adjustment Create new pay item				
	*Pay item number 🗹	Li	ne number	Sales order
			5	
	Description Description	List of pay items		×

	*oom (onit of measure,	1		A
		2	2	
	Current price	3	L	
		4	D4	

7.6.2 Change markup in contract adjustments

Control consumes markup amounts from InEight Change. The total amount and costs coming from Change, including the markup, integrate into Control. Billing rate markup, CCO markup, and CCO unassigned markup are all contract adjustment header fields that can help you make more informed decisions on how to adjust the Adjusted current price.

	otal	CCO unassigned budget	Net budget change	Net quantity change	Net man hour change	Billing rate markup	CCO markup	CCO unassigned markup	Fee	robability
		\$ 0.00	\$ 1,060.00	Yes	1,000.00	\$ 0.00	\$ 64.13	\$ 64.13	\$ 0.00 \$ 1	oute
					1 Details 2) Cost items	(3) Time phased b	udget 4 Pay	y items 5	
⊕ ⊗					1 Details 2) Cost items	3 Time phased b	udget 4 Pay	y items 5	
Apy item number		Adjusted	Current price	Adjusted	Details (2)	nit —	3 Time phased b Adjusted current pay qty	Current pay	Currel.	

7.6.3 Contract Adjustments with cost item markup

Performing contract adjustments that start with cost items lets you assign markup and fee values to pay items. Your pay items are then driven off of your cost items plus some markup percent in addition to a flat fee as well. The sum of your markup and fee is your planned profit.

The contract adjustment details register also has a new header that displays the amount that is going to change while navigating through the contract adjustment steps.

CCO total budget	CCO unassigned budget	Net budget change	Net quantity change	Net man hour change	Billing rate markup	CCO markup	CCO unassigned markup	Fee	Net contract change	CCO agreed price	CCO unassigned price	Approval probability
\$ 702.09	\$ 0.00	\$ 702.09	Yes	14.21	\$ 0.00	\$ 0.00	\$ 0.00	\$ 0.00	\$ 0.00	\$ 702.09	\$ 702.09	100.00% - Execute

The following Step by Step guides you through the creation of a cost item contract adjustment.

Cost Item Contract Adjustment

- 1. Select the **Actions** drop-down menu.
- 2. Hover over Budget move and contract adjustment, then click Contract Adjustment.
- 3. Select Start with Cost items, fill out the Issue #, CCO, and Description fields as needed, then select **Next**.
- 4. In the Cost Items screen, select a cost item, or, if there are no cost items on the grid, cost items by selecting the **Add** icon.
- 5. Enter values in the Adjusted CB total cost, Markup %, or Fee fields. Select **Next** to get to the pay item screen.
- 6. In the Adjusted Total Price column, manually override the total price by selecting the total price field you want to change. Enter a new value, then select **Next**.
 - The Summary tab is read-only. Use this step to finalize and confirm your contract adjustments.
- 7. Select **Submit** to send for approval or Draft to save for later edits.

7.6.4 Contract Adjustments from CCM

Contract adjustments can be made within the Change application and are visible in the Change Register of the Control application. After an Issue is created in Change, and becomes an Executed Contract Change Order, it appears as a pending contract adjustment in Control.

NOTE The contract adjustment does not allow you to select **Start with cost items** if you are using a CCO-draft that originated from Change.

Control creates a new line item in the Change Register that states the following details:

- CCO label
- Issue #
- Description
- Total contract cost adjustment

From the Change Register, you can revise the new contract adjustment line item and then define which pay items the negotiated price should be assigned to, as well as which cost items should be updated with additional budget. In the Contract Adjustment Wizard users can view the CCO agreed price and net contract change based on your adjusted pay items. After the items have been defined the contract adjustment is then submitted and goes through the change approval process.

7.6.4.2 Assign Pay Item Assignment when a new Cost Item comes from Change

When new cost items are sent to Control from Change, you can assign cost items to pay items. After a contract adjustment is approved, the pay item assigned during the contract adjustment is shown in the Pay item assignment field in the CBS.

Task details	< •••• >
WBS phase	Pay item assignment
1848	ALLOWANCE.
3004	ALLOWANCE.
3005	ALLOWANCE.
3006	ALLOWANCE.
3007	ALLOWANCE.

7.6.5 Consume pay item associations with new cost items from InEight Change

Control change orders can consume Change's pay items association with new costs items. Change associates new cost items with pay items as part of a contract adjustment, once approved.

		103961 Ten Mile Slide - P		е		
(Change ma	nagement > Issue >	5-Issue 1			
	urrent v 1,302.0		Billing marl 9 \$ 0.00	kup	Markup \$ 0.00	Markup % 0.00%
ļ	Actions	• 🕂 🗹 😣		+%		DETAILS
>>>		Cost item description \Xi	WBS phase code	Pay item	-	Cost pricing - A
-		Cost item pricing				\$ 1,302.09

_		Maintain Access Road	1005	2 - 002		Labor
ricing		Clear & Grub Bench B &	1006			Labor
Cost item pricing				4		

For example, when you create a new cost item in Change with a pay item association for a contract adjustment, and then execute, the newly created cost item becomes associated with the pay item that was assigned in Change.

This pay item assignment shows in the contract adjustment cost item and pay item steps.

CCO total budget	CCO unassigned budget	Net bud change	get	Jur	Billing rate markup	r 000					
\$ 1,302.09	\$ 0.00	\$ 1,302.	.09		\$ 0.00	\$ 0.00

			1		001	\$ 100.	00 •	\$ 100.00		\$ 0.00	\$ 100.0
					-						

7.6.5.3 Create Pre-approved Cost Items in InEight Change

You can create plug cost item placeholders directly in Change. This integration begins when an issue is created in Change, a new cost item is added, then converted into a CCO and executed.

Change management >	Issue-6-frame adjustmen	nts		Actions	•	DETAILS		SUPPORTING	$\overline{\Xi} = \Sigma$	= 🙂	ti (t
Current value	Cost	Billing markup								Cancel	Save
0.00	\$0.00	\$0.00	>>		Cost item description —	WBS phase code 👘	Cost pricing	- Adjusted CB Qty	÷ UoM	— Adjus	ted MHrs
Actions -					Cost item pricing						0.
<u> </u>	isting cost items			Labor							0
	w cost item				new cost item	New	Labor	1.	00 CY		0

After the executed CCO is revised in Control as a CCO draft, approving the CCO initiates the creation of the new cost item.

7.6.6 Pay Item Locking

At the beginning of a project, pay items in Control are unlocked. You can modify the following current amounts directly in the grid when your price is not locked:

- Current price
- Current unit price
- Current pay quantity
- Current billing method
- Current forecast takeoff quantity

The original columns in the grid shows what your original pay values were for those pay items before any change orders or contract adjustments were done.

		•																			_		-

	test 2							00 Fixed fir	hal													0.00		

For example, prior to any changes, the original columns show your agreed upon pay item values. Then the current columns shows your original values.

Unlocking Pay Items

- 1. From the CBS tab of the Control Workspaces page, click the Actions drop-down menu.
- 2. Select the Unlock Pay Items option.

When your pay items are already unlocked, a yellow banner is shown.

You can edit your billing method directly in the grid if the billing method has not already been billed. You can also edit directly in the pay item details slide-out panel.

		~ ~															_		-		-

										Original billing method				Current billing	method				1		00
										Original billing method				Current billing					T		
														Current billing Fixed final pr Current price	rice				1		
										Original billing method				Fixed final pr	rice				1	\$0.	•

You can also add new pay items directly in the pay items register without doing a contract adjustment. For example, if you click the **Add pay item** icon and the price is unlocked, you can add a pay item directly into the grid which opens the pay item slide-out panel.

After you are finished editing the pay item register, you can lock your price either from the banner or from the Actions menu. After the price is locked, the items from the grid become read-only. The only way to make changes now is to do a contract adjustment. Current values change while original values stay the same.

Any pay items that you edit or add are tracked in the pay item audit log as well as price locks.

7.6.7 Importing Budget Revenue Details from InEight Change

You can associate cost items from Control to an issue in Change. The adjusted cost, quantity, and manhours for selected cost items are imported from Change into a contract adjustment in Control. These items automatically populate the the contract adjustment that is generated from Change.

7.6.7.4 Budget Header Information

	CCO total budget CCO \$ 28,000.00 \$ 0.0		et budget change 28,000.00	Yes	tity change Net man h 100.00		\$ 0.00 \$ 0.00	tract change CC \$ 3	O agreed price 30,700.00	CCO unassigned \$ 30,700.00		ted Change Order

	CBS position	Description	WBS phas code	e 👻	CB total cost	Adjusted CB total cost	Markup =	Markup 😑	Fee	CB total MHrs	Adjusted CB total MHrs	CB total quantity	Adjusted CE total Qty
Unassi	gned cost items												
	12	Test - Change 1.	1963		\$ 100.00	\$ 1,000.00				10.00	100.00	1.00	
	14	Test - Change 2.	1965		\$ 200.00	\$ 2,000.00				0.00		1.00	
	15	Test - Change 3.	1966		\$ 2,500.00	\$ 25,000.00				0.00		1.00	
					4								

The header information includes the following:

- CCO total buget
- CCO unassigned budget
- Net budget change
- Net contract change

The CCO total budget includes the cost amount that was adjusted in Change. The CCO agreed price section includes the Executed CO amount. The CCO agreed price is the cost plus mark ups.

The CCO unassigned budget is the difference between the Net budget change, which is the sum of all the modifications in the contract adjustment, and the CCO total budget. For example, if you have any items not allocated to a cost item, the CCO unassigned budget changes value.

The Net budget change is the adjusted CB total cost.

The Net contract changes are derived from the total pay item changes. For example, you can add a pay item directly in the grid, and either add all of that amount to one pay item or split it out among pay items.

You can also price out a change order using the agreed-upon cost item amounts from Control. Then, when you execute a CCO in Change, Control automatically attributes the adjusted amounts to the correct cost items.

The Net contract change must equal the CCO price or it cannot be approved, causing an error to show.

\$ 28,0		\$ 28,000.00	Yes	Net man hour change Markup Fee Net contract change CCO agreed price Approval probability 100.00 \$ 0.00 \$ 0.00 \$ 30,700.00 \$ 30,700.00 100.00% - Executed Chan.

7.7 CHANGE APPROVAL PROCESS

After submission, all budget moves must be reviewed and approved before their values are added to the Current Budget. The Change register allows users with appropriate permissions to review the details of contract adjustments and budget moves, and either revise, reject, or approve the changes.

To access the Change Register, click on the "Change Register" tab at the top of the Control workspace.

- The submitted entries have a status of Pending in the Status column of the Change register
 - **Rejecting** the change ends the change process and prevents the proposed changes from updating any pay items or cost items

- **Revising** the change restarts the change process for the proposed pay and cost items, and re-submits the change for approval
- **Approving** the change makes the proposed pay and cost item changes final and updates the project price and cost information accordingly

Right click on a change register record to view further record details, make revisions, and review the changes that were previously made to the change record.

Approve a Contract Adjustment / Budget Move

- 1. Click on the **Change Register** tab.
- 2. Click a **Contract Adjustment** record.
- 3. Review your proposed changes to both your pay item, and cost item(s) as applicable.
- 4. Click the **Approve** button.

NOTE If you reject a change order and then revise, the revision is noted in the change record's ID number.

Exercise 7.1 – Change Management

Now that you have covered the key tasks related to change management, you can practice making changes on your own. You can use your own project (if available) or the training project used in this lesson.

- 1. Review the project and determine a scenario that would require a contract change.
- 2. Perform a Contract Adjustment per your scenario, including the creation of a pay item.
- 3. Once completed, approve the Contract Adjustment.

Congratulations, you have completed this exercise!

Review

- 1. Where can you review the details of your contract adjustment or budget move and choose to either revise, reject, or approve the change?
 - a. Change Register
 - b. Approval Screen
 - C. CBS Log
 - d. Contract Change Log
- 2. When creating a budget move, what is recommended?
 - a. Issue number
 - b. Description
 - C. Dollar amount
 - d. All of the above

Summary

As a result of this lesson, you can:

- Explain the change management process
- Complete a cost budget move
- Complete a quantity budget move
- Complete a man-hour adjustment
- Create an adjustment to the contract
- Describe the change order approval process

This page intentionally left blank.

REVENUE MANAGEMENT

Lesson Duration: 45 minutes

Lesson Objectives

After completing this lesson, you will be able to:

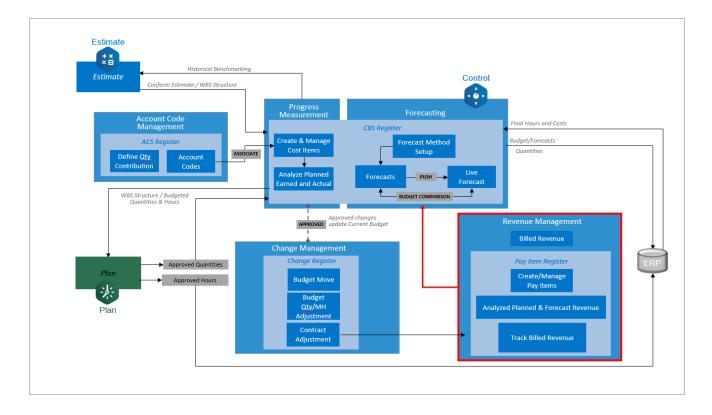

- Forecast revenue and determine profit
- Manage pay item details
- Adjust pay item earning rules
- Bill customers per pay item or in mass
- Track billed revenue

8.1 INEIGHT CONTROL WORKFLOW - REVENUE MANAGEMENT

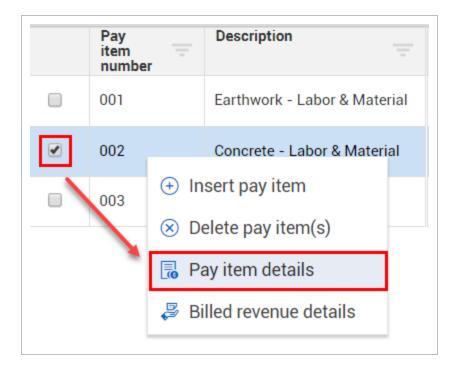

8.2 PAY ITEM DETAILS

When you right click on a pay item, a context menu appears with four options for managing pay items. You can:

- Insert a pay item
- Delete a pay item
- Access/maintain pay item details
- Access/maintain billed revenue details.

Selecting Pay item details will open a Pay item Details slide out panel.

You can also access this context menu by hovering over to the right of the Description and clicking on the three black dots.

Pay item number =	Description
001	Earthwork - Labor & Material
002	Concrete - Labor & Material
003	Steel - Labor & Material

8.2.1 Details Tab

The first tab in Pay item details is called Details. This is where you can view the details for the pay item such as Total Price, Pay Quantity, and Unit Price. You can also make changes to fields such as Pay Item number, Line number, and Description.

1 - 1 Concrete Pay item position 1	Current price \$ 100,000.00	Curren 1.00	nt pay qty	Current unit price \$ 100,000.00	Current billing method Fixed final price	
	DETAILS	ATTRIBUTES	CHANGE ORDERS	COST ITEMS	COST CATEGORIES	
* Pay Item number		Line number		Sales o	rder	
1		1				•
Description						492
Concrete						
Original billing method			Current billi	ng method		
Fixed final price			Fixed fina	-		

8.2.2 Attributes Tab

Next is the Attributes tab. This is where you can associate specific tags to your pay item, or to define field values.

1 - 1 Concrete Pay item position 1	Current price \$ 100,000.00	Current 1.00	pay qty	Current unit price \$ 100,000.00	Current billing method Fixed final price	×
	DETAILS	ATTRIBUTES	CHANGE ORDERS	COST ITEMS	COST CATEGORIES	
РТ1	-	PT2		PT3		•
PT4	•	PT5		PT6		•

8.2.3 Change Orders Tab

The Change Orders tab displays all change orders associated to the selected pay item.

1 - 1 Concrete							
ay item position	n Current price		Current pay qty		nt unit price	Current billing method	1
1	\$100	0,000.00	1.00	\$ 100,	000.00	Fixed final price	
	DETAILS	S AT	TRIBUTES CH	HANGE ORDERS CO	OST ITEMS CC	OST CATEGORIES	
Change order number	000	Issue #	Total price change	Total unit price change	Total pay qty change	Approval probability	Ad for res
			No re	cords available.			-

8.2.4 Cost Items Tab

The Cost Items tab displays the cost items that are assigned to the selected pay item. In this example there are two cost items assigned to the 002 Concrete – Labor & Material pay item.

oncrete ay item position	Current price \$ 100,000.00	Cur 1.00	ent pay qty		Current unit price \$ 100,000.00	Current billing Fixed final price	
	DETAILS ATTRIBUTES CHANGE ORDERS		RDERS	COST ITEMS	COST CATEGORIES	COST CATEGORIES	
						_	
arnings amounts based	J on:	ity 💿 CE total cos	t	L		 ピ リ	pdate earning rul
•	d on: O Forecast (T/O) q		S Phase	Earning %	Ŧ	년 U Earning Amount (Forecast)	pdate earning rul
CBS Position	Description	WB Cod	S Phase	Earning %		Earning Amount	=

8.2.5 Cost Categories

The Cost Categories tab shows a break at the cost category level for the cost items that are assigned to that pay item. This tab is a quick way to see where you have cost and revenue as well as where you have revenue at the pay item level for the pay item at the cost category level. The different fields represent the different billing methods that are available currently.

	DETAILS	ATTRIBUTES	CHANGE ORDERS	COST ITEMS	COST CATEGORIES	
Cost category	Forecast final revenue	Revenue earned	Billed revenue	Markup amount	Total cost (to date)	
∧ Total	\$ 15,000.00	\$ 7,500.00	\$ 2,000.00	\$ 1,000.00	\$ 900.00	
→ Labor			\$ 1,000.00		\$ 100.00	
✓ Constructio			\$ 0.00		\$ 0.00	
✓ FOM Rente			\$ 0.00		\$ 0.00	
∽ Supplies			\$ 0.00		\$ 0.00	
✓ Materials			\$ 0.00		\$ 0.00	
✓ Subcontract		S	\$ 0.00		\$ 500.00	
∽ Fees			\$ 0.00		\$ 300.00	
✓ Allowance			\$ 0.00		\$ 0.00	
G & A			\$ 0.00		\$ 0.00	

Forecast final revenue, Revenue earned, and Markup amount only show at the totals level of the cost categories.

Forecast final revenue and Revenue earned shows the information that is pulled from the pay item's register.

The Total cost to date column breaks down the information from the information from the cost items assigned to the pay based on where you claimed the cost for those items.

The Markup amount calculates the difference between your total price and your agreed upon current budget cost for those assigned cost items. The Markup amount uses the calculation Total price on the pay item - sum of the CB total cost on the assigned cost items

8.3 BULK IMPORT PAY ITEMS

You can import pay items in mass directly into the Pay Item and Proposal register, similar to how cost items can be imported directly into the CBS.

You can access the Excel import feature by clicking on the Import icon on the far right toolbar of Control > Workspaces > Pay Items.

							0	4 ⁴	8 E	
Billed date:	06/21/20	to	08/20/20	Ċ	T	↓AZ	¥	٢	\$≣	Q
Pay item tag 8	Pay item tag 9		Pay item tag 10	Pay item user		Pay item user	i it	ay tem	Pay item user	

When you click on the Import icon within the Pay Items tab of the Workspaces page, the Import Pay Items window is shown.

Overview – Import Pay Items window

	Title	Description
1	Import from Excel	You can either drag and drop or browse to the file to import. Microsoft Excel files (.xlsx,, .xls) and Comma Separated Value (.csv) files can be imported.
2	Import Type	You can add new pay items into the Pay Item and Proposal register.
3	Information message	Explains that once an import file is specified, the next step will allow you to match the columns in your spreadsheet to the appropriate columns in Control.

Import from Excel (.xlsx, .xls) o	r Comma separated value (.	csv)
		op the file here
	Br	rowse
Options * Import type Pay Items	0	(i) The import file is read and field mapping can be specified. Mapping uses row 1 headers from the source document
New import		

Clicking Next brings you to the Map columns window, where you can map your Excel columns to the applicable column in Control.

Overview – Map Columns Window

	Title	Description
1	Template	After you map the import file columns to the Pay Item columns in Control, you can save your settings as a template for future use. This is helpful when you need to make scope changes or updates on a regular basis.
2	Control field	The names of the column headers in Control that you can map your data to.
3	Mapped	A green checkmark indicates the column in your import file is mapped correctly to the Pay Item's column. The Green key indicates the matching code you specified is locked.

Overview - Map Columns Window (continued)

8.3.1 Spreadsheet Rules

For the import to work correctly, the items in your Excel spreadsheet need to be formatted in a certain way so that Control can recognize them. The following table indicates important spreadsheet rules to follow to make sure your data imports successfully:

Attribute	Rules
Import	Reads the first worksheet within the referenced workbook.

Attribute	Rules
function	Stops the import process when a blank row is encountered, so consolidating the data to be imported is required.
First row of data	This is the header row of the data. This becomes the titles that are referenced during the mapping process. During import, headers are not read if a blank header cell is encountered.
Numbers	Need to be the actual number, not the summation of cells. Cannot contain the \$ or other currency symbol.
Second row of data	This is the first row of data import.

NOTE If you make changes in the spreadsheet, you must save the spreadsheet before importing. Only saved data are imported.

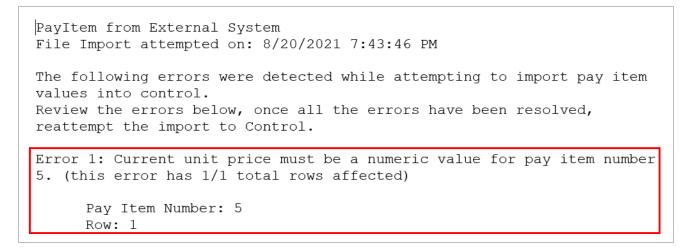

After clicking the Next button, the system reads your Excel file and attempts to import pay items. A successful import shows a message stating the number of files to be imported.

Document contains no errors 1 record(s) ready for import Select next to continue with import steps.		
	Cancel	Next

If the import is not successful, a message is shown stating that errors exist. An error file is provided for you to download, review, make corrections to your Excel file, then eventually continue with the pay item import again.

1 of 1 records contain errors Pay Items were imported. Multiple errors found in pay item import.
Pay Items were imported. Multiple errors found in pay item import.
Download the error file to review and resolve errors. Once all errors have been resolved, reattempt import.
Close Download Error F

The import error download file shows exactly where the error(s) exist within the Excel file.

8.4 EARNING RULES

On the Cost Items tab the **Update earning rules** icon updates the earning rules for all associated cost items. For each cost item associated to a pay item, you can adjust the earning rules by Earning % and Earnings Timing. The Earnings timing indicates when you can earn revenue for a specific cost item associated to a pay item. You can select from the following earnings timing options:

- Percent complete You will earn revenue based on the % complete of the cost item
- Start -You will earn all the revenue when the work of the cost item is started (e.g., Mobilization)
- **Finish** You will not earn any revenue for the cost item until all the work is completed (e.g., QC item)

Pay item ID		Description		Total Price		
002		Concrete - Labor & Mater	ial	\$2,919,020.71		
CBS Position	Description	Earning %	Earning Amount (Forecast)	Earnings Timing	WBS Phase Code	
5.2	Concrete - Materials	25.00 %	\$ 729,755.18	Percent complete 🔻	1086	
3	Concrete	75.00 %	\$ 2,189,265.53	Percent complete	1071	
		100.00 %	\$2,919,020.71	Start		
Default Earning Rules				Finish		
					Cancel Sav	

In this case for your Structural Steel Project, cost item 3 has an earning rule that equals 75% of the Earning Amount (Forecast) of the pay item's final revenue. Respectively, cost item 5.2 has an earning rule of 25% of the Earning Amount (Forecast).

Since the Total Price of this pay item is \$2,919,020.71, it is expected that cost item 3 will earn 75% of this amount, and cost item 5.2 will earn 25%.

Pay item ID 002		Description Concrete - Labor & Mater	ial	Total Price \$2,919,020.71				🔀 Update earn
CBS Position	Description	Earning %	Earning Amount (Forecast)	Earnings Timing	WBS Phase Code	Earr	ning %	Earning Amount (Forecast)
5.2	Concrete - Materials	25.00 %		Persent complete 🔻	1086			
3	Concrete	75.00 %	\$ 2,189,265.53	Percent complete	1071			
		100.00 %	\$2,919,020.71				100.00 %	\$2,919,0
Default Earning Rules								
					Cancel Save			

NOTE Billing method of Cost plus

When the billing method of the pay item is set to Cost Plus, then the Update earnings rules option will be disabled. Therefore, the associated cost items of the pay item will earn revenue based on the assigned estimate resources' billing rates and the % complete of the cost item.

Adjusting Pay Item Earning Rules

- 1. On the Pay Items tab, select a pay item.
- 2. Hover over to the right of the Description and click on the **three black dots**.
- 3. Select Pay item details.
- 4. Select the **Cost Items** tab.
- 5. Click the **Update earning rules** icon.
- 6. Change the Earning % percentages for each associated cost item so the total will equal 100%..
- 7. Click Save.

8.5 BILLED REVENUE

On the Pay Items screen, selecting Billed revenue details from the context menu opens the Billed revenue slide out panel.

									1 1					×
								i	BILLED	RE	TENTION	BILLED HISTORY		
Actio	ins 🔻 (+)	\otimes	0 Ø	[→]) Move	to			Pending billable qty 0.00	Pending billable \$ 150.00	revenue	Retainage % 5.00 %		-

Billed quantity		* Billed date		
0.00		08/30/2022		Ť.
Cost item				
Type a CBS position, Descrip	tion, or Phase code			-
Change order				
Type a Change order ID or De	escription			-
Notes				250
Notes				

After selecting apply, the billed amount is visible on the Pay Register screen under the five Billed columns:

- Is billed If checked, a billing record has been created
- **Billed quantity** This is based on your pay quantity, and depends your UOM, and how you want to bill the quantity
- Billed revenue What you billed to the client
- Pending billable quantity = Earned quantity Billed quantity to date
- Pending billable revenue = Earned revenue Billed revenue to date

8.5.1.1 Unit Price Proportional Billing

When you bill revenue or quantity for unit price pay items, the billed quantity or revenue automatically adjusts proportionally to the entered billed value to match the unit price.

For example, if the current unit price is \$1,000.00 and the billed quantity is 0.50, then the billed revenue automatically calculates at \$500.00.

8.5.2 Billed Revenue Details

Once you have billed revenue and quantity to your customer, all columns will populate with values.

Pay item number 📃	Description	Total price	Unit price	Forecast final =	Is billed	Billed quantity 📃	Billed revenue
001	Earthwork - Labor & Mater	\$ 759,887.01	\$ 759,887.01	\$759,887.010000		5.00	\$ 100.00
002	Concrete - Labor & Material	\$ 2,919,020.71	\$ 2,919,020.71	\$2,919,020.710		1.00	\$ 100.00
003	Steel - Labor & Material	\$ 1,821,092.28	\$ 1,821,092.28	\$1,821,092.280		0.00	\$ 0.00

As soon as work is progressed on the cost item(s) associated to a pay item, the quantity earned, revenue earned, pending billable quantity, and pending billable revenue fields will populate with values. When a bill is processed, the billed quantity and billed revenue fields will update, and the pending billable quantity and pending billable revenue fields will also update (subtract out the new billed amounts). The quantity earned and revenue earned columns are not affected by billing.

As a result of the Push or Get Billed revenue actions, this will update each respective pay item.

4					1				Þ

The billing-related fields that are now part of the Pay Items register are the **Billed Revenue**, **Billed Quantity**, **Quantity earned**, **Revenue earned**, **Pending billable quantity**, and **Pending billable revenue** columns. Once you have billed revenue and quantity to your customer, all columns will populate with values. The pending amount fields are driven from the Quantity earned and Revenue earned amounts. Furthermore, the pending amount fields help you identify what has been billed versus what is left to be billed based on what has been completed for your cost items.

The Is billed checkbox also populates when a pay item has been billed.

	PAY IT	EMS		CHANGE REGIST	ER	AUDIT LOG

				То	date

8.5.2.2 Change Orders

When creating a bill in the slide-out panel, or from the bill multiple pay items option, you can select a change order to assign the billed amount to.

Associate a change order to a pay item by selecting a change order either from the Billed revenue details, or Bill multiple pay items options. This lets you select which approved change orders to assign to the bill.

The following Step by Step walks you through how to bill a customer for revenue earned.

Billing Revenue

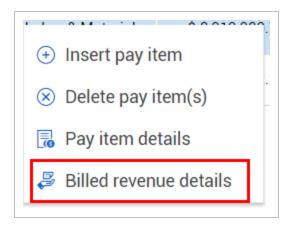

1. On the Pay Items tab, select the a pay item.

Pay item number	Description
001	Earthwork - Labor & Material
002	Concrete - Labor & Material
003	Steel - Labor & Material

2. Hover over to the right of the Description and click on the **three black dots**.

Pay item number	Description
001	Earthwork - Labor & Material
002	Concrete - Labor & Material
003	Steel - Labor & Material

3. Select **Billed revenue details**.

- 4. Under the Billed tab, enter the following:
 - Billed revenue = **\$100.00**.
 - Cost category = Installed Materials
 - Billed quantity = 1
 - Billed date = today's date
 - Cost item = [insert a cost item from the dropdown menu]
 - Notes = 'billing \$100.00 for materials needed for concrete prep work, performed on 08/02/2019'
- 5. Select **Apply**.

	BILLED	BILLED HISTORY

8.5.2.3 Pay Item Billing in Mass

Billings often include multiple pay items. For that reason Control also allows users to claim billed quantities and revenue for multiple pay items at a time using the pay item grid view. This is in lieu of using the Billed Revenue Details slideout panel, per pay item. On the Pay Items screen, select those desired pay items you wish to bill.

Pay item number	Description
01.02	FIELD SUPERVISION, ADMIN & MAINTENANCE
01.03	FIELD OFFICES AND SHEDS
11.1	EPOXY COATED STEEL SHEET PILE

NOTE

In the example below for Pay Item 11.1, the Revenue Earned represents the amount that has been earned to date. Revenue earned is based on the cost items associated to this pay item. As cost items are being claimed, Revenue earned is generated. For Pay Item 11.1, under Revenue earned, \$365,924.12 has been earned to date. Billed revenue is showing that \$20,966.00 has been billed thus far. The difference between the Revenue earned and the Billed revenue, is the Pending billable revenue which is \$344,958.12. This is the amount that you can bill to the customer.

Pay item number	Description	Bille quar	Billed	Pending billable quantity	Pending billable revenue	Quantity earned	Revenue earned
01.02	FIELD SUPERVISION, ADMIN & MAINTENANCE	21,027.00	\$ 26,311.00	-21,004.55	\$ 1,545,122.64	22.45	\$ 1,571,433.64
01.03	FIELD OFFICES AND SHEDS	21,921.00	\$ 21,574.00	-21,909.60	\$ 377,555.84	11.40	\$ 399,129.84
03.04	STRUCTURAL STEEL	21,072.55	\$ 21,061.00	-21,030.66	\$ 355,983.32	41.89	\$ 377,044.32
11.1	EPOXY COATED STEEL SHEET PILE	21,417.00	\$ 20,966.00	161,545.06	\$ 344,958.12	182,962.06	\$ 365,924.12

Typically, when it's time to bill, you can select the pay items with positive values in the Pending billable revenue column.

Pay item	Descriptic	Line	Total price	Unit price	Pay quantity	Forecast T/0 Qty	UoM	Is billed	Billing	Billed	Billed	Pending billable	Pending billable revenue	Quantity earned	Revenue
01.02	FIELD SUPE	2	\$ 3,220,000.00	\$ 70,000.00	46.00	46.00	Mo		Unit price	21,027.00	\$ 26,311.00	-21,004.55	\$ 1,545,122.64	22.45	\$ 1,571,433.64
01.03	FIELD OFFI	3	\$ 1,610,000.00	\$ 35,000.00	46.00	46.00	Мо		Unit price	21,921.00	\$ 21,574.00	-21,909.60	\$ 377,555.84	11.40	\$ 399,129.84
03.04	STRUCTUR	19	\$ 1,737,000.00	\$ 9,000.00	193.00	193.00	Ton		Unit price	21,072.55	\$ 21,061.00	-21,030.66	\$ 355,983.32	41.89	\$ 377,044.32
11.1	EPOXY COA	72	\$ 1,090,000.00	\$ 2.00	545,000.00	545,000.00	Lb		Unit price	21,417.00	\$ 20,966.00	161,545.06	\$ 344,958.12	182,962.06	\$ 365,924.12

A negative value in the Pending billable quantity and/or Pending billable revenue fields signifies an over billing to the customer.

When it's time to bill a customer, select the desired pay items to mark for billing, right click, then select the Bill multiple pay items option.

Pay item	Descriptic	Line number
01.02	FIELD SUPE	2
01.03	(+) Insert pay ite	em
03.04	 Delete pay it 	
11.1	Pay item det	
Danielle test	Billed revenu	
PAY ITEM 1	Bill multiple	_
02.01		pay nemo

The New Bill Request screen appears, which displays billing related fields to potentially be billed to the customer. The Pending billable quantity and Pending billable revenue fields are at zero because their values have been moved to the Billed Revenue and Billed quantity fields, to be billed as part of the overall transaction. The Billed revenue and Billed quantity values in the New bill request window will match the Pending billable revenue and Pending billable quantity values in the Pay items tab.

In the New Bill Request example below, the values in the Billed quantity and Billed revenue fields are the amounts that are to be billed to the customer. The Billed Revenue and Billed Quantity columns show the same amounts that exist in the Pay Item screen under the Pending billable quantity and Pending billable revenue columns.

Pa	ay Item > Ne	w Bill Request								Cancel	Sub		
e													
	Pay item	Description	Billing method	Pending billable	Pending billable quantity	Billed revenue	Billed quantity	Unit of	Cost category	Cost item			
	03.04	STRUCTURAL STEEL	Unit Price	0.00	0.00	355,983.32	-21,030.66	Ton	Undefined				
	01.02	FIELD SUPERVISION, ADMIN & MAINTEN	Unit Price	0.00	0.00	1,545,122.64	-21,004.55	Mo	Undefined				
1	01.03	FIELD OFFICES AND SHEDS	Unit Price	0.00	0.00	377,555.84	-21,909.60	Mo	Undefined				
	11.1	EPOXY COATED STEEL SHEET PILE	Unit Price	0.00	0.00	344,958.12	161,545.06	Lb	Undefined				

You also have the option to change the Billed Revenue amount in the New Bill Request screen. For example, if there's remaining work still to be done, and it's not 100% complete, you can change the Billed revenue to a different amount. Using the example below for Pay item 11.1, you have the option to partially bill the Pending billed revenue of \$344,958.12. By changing the Billed revenue amount to \$300,000.00, the remaining \$44,958.00 displays under the Pending billable revenue column.

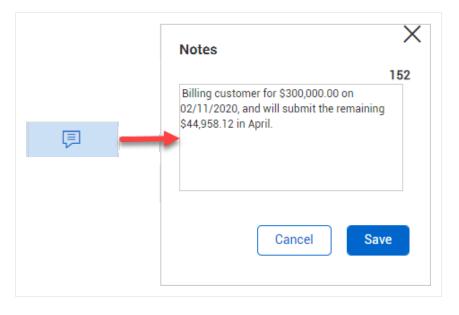

Now, you can see that if you bill for \$300,000.00, then you still have \$44,958.00 available to bill.

The following Step by Step walks you through how to bill for multiple pay items.

Bill for Multiple Pay Items

1. On the Pay Items tab, hold down the SHIFT key and select any **3 pay items** you wish to bill in one transaction.

	Pay item number	Description
	11.1	EPOXY COATED STEEL SHEET PILE
	PAY ITEM 1	Danielle test
	02.01	REMOVALS
	90909190	909090
	01.05	TEMPORARY UTILITIES, SITE SURVEYS, TESTI

- 2. Navigate to the **Bill multiple pay items screen** by clicking on the context menu.
 - The Billed Revenue in the New Bill Request screen should match the Pending billable revenue in the Pay Item screen
- 3. Change the **Billed revenue value** to bill half the amount to the customer.
 - The other half should appear in the Pending billable revenue field
- 4. Assign a cost category to the new bill request.
- 5. Type **Billing half the amount the customer now, and will bill the other half when job is complete** in the Notes field.
- 6. Select the **Submit** button.
- 7. Navigate to the **Billed History** tab for the pay item just updated and look at the entry created for this transaction.

8.5.3 Actualizing Revenue

In Pay Items, after a bill has been sent to a client, you can log revenue that has been received and log and track received revenue.

In the Pay Items register, when you select the Claim Revenue icon, it shows all transactions for all pay items that contain billed revenue that has not been logged as received.

≡	🟠 103961 Ter	n Mile Slide	e - Phase 2 (Carry	ring) / Control / N	Workspaces
Actio	ons 🔻 (+)	\otimes	⊘ ⊡	Move to	
			•		
	⊗ Pay item positio	n	Pay item number	Descript	Line — num —
	1		1	1	1

Alternatively, you can right-click on one or more pay items and select Actual revenue details.

Ξ	ଜ 10	3961 Ten Mi	ile Slide -	Phase 2	2 (Carry	ing) / Control /
Actio	ons 🔻	(\div)	\otimes	0 2	Þ	Move to

4	4	4	\$ 2,500	\$ 2,500.00	1.00	\$ 600.00

8.6 REVENUE FORECASTING

Revenue forecasting is used to determine the projected revenue a contractor will receive for completing a project or scope of work. The amount of revenue earned compared to the total cost spent determines how much profit and % margin is made. Therefore, understanding projected revenue is critical to determine the profitability and health of a project.

It is often necessary to compare forecasted cost to expected revenue at a cost item level. Within Control, you can view this comparison using the revenue columns available in the CBS. The revenue fields in the CBS auto calculate based on the billing method of each line item or can be overridden by manually entering a revenue forecast.

8.6.1 Pay Item Position Code Column

The Pay Item tab contains a Pay Item Position column that lets you view, sort, and group pay items in a hierarchical manner much like you can in the CBS. This feature lets you expand and collapse pay items by clicking the down-arrow, while also letting you group scopes of work together into a hierarchy.

	Pay item number	Descri	Line	Row	Curr price	Curr unit price	Curr pay qty
✓ 1	Pay 1	Pay 1	1	26	\$ 80,20		
✓ 2	16Pay 2	Pay 2	17	15	\$ 0.000		
✓ 3	17Pay 3	Pay 3	18	16	\$ 0.000		
4	Testpay	Set new pay	37	27	\$ 0.000	\$ 1.50000	0.0000000

Adjusting the pay item position code column lets you see the parent-child rollup relationship between pay items, terminal pay items, and the revenue forecast method, in addition to any other price and revenue columns. This lets you see how the values for the child pay items all roll up to its parent pay item, then see the totals at a parent pay item level.

≫ Pay item position	Pay item number	Descri	Line	ls	Row	Current price	Revenue forecast method

Overview – Revenue Forecasting fields

Columns	Description
Forecast Final Revenue	This is your expected final revenue, calculations vary by billing method.
Forecast Final Cost	Total cost (to date) + Forecast remaining cost.
Revenue Forecast	The three options are default, manual and rollup. Default is system calculated.
Method	The roll-up revenue forecast method is automatically assigned for parent pay items, and not editable, as all forecast revenue for child pay items rolls up to the parent pay item.
Billed Revenue	Amount billed to the client for a single pay item.
Fixed Final Price	Lump sum billing method (price agreed upon by a contractor and a client does not change without a contract order).
% Margin	Forecast final margin/forecast final revenue.

Overview – Revenue Forecasting fields (continued)

Columns	Description
Forecast Final Margin	Forecast final revenue - Forecast final cost. This is the total profit you're forecasting to make at completion of the job.
Forecast Final Revenue	Cost item forecast final revenue at completion. This calculation varies by assigned pay item's billing method. This value is based on the Pay item's final revenue * a percentage that can be earned by the cost item.
Forecast Remaining Revenue	Forecast final revenue - Forecast revenue earned, revenue remaining to earn.
Forecast Unit Revenue	Forecast final revenue/Forecast take-off quantity, amount of revenue earned per quantity.
Forecast Revenue Earned	% complete * Forecast final revenue. This is revenue that is earned based on completion of work.

8.6.1.1 CBS Register

8.6.2 Cost Item Revenue View

It's important to see forecasted cost and forecasted revenue side by side, in order to compare the costs and revenue on individual cost items as a subtotal of the overall project.

Control has a standard Revenue data block containing six revenue-related columns. Permissions can be established to limit who may view these Revenue columns. You can view this data block within the same view as your forecasted costs for a side by side comparison.

	als 11			15.45.5	\$ 849.964.29	0.5.500.000	\$ 5.500.000.00		\$ 0.00		\$ 4.650.730.71	\$ 0.00		\$ 4.950.000.00	\$ 4.650.730.71

The Revenue columns can only be populated if the associated cost items have an assigned pay item. In the example below, cost item 1 Job Overhead, does not have a corresponding pay item assignment, therefore the Revenue columns are not populated. The opposite is true for Cost item 2 which has a corresponding pay item assignment.

Task	S				:	Task details	< •••• >	:	Revenue		•	<>			1

8.6.3 Cost item revenue calculation by allows as-built

Parent cost items that are tracking costs and quantities, revenue is calculated at the parent cost item level.

For parent cost items where the allow as-built is not equal to *None*, where cost or quantities are being tracked, revenue values are now being calculated at the parent cost item level rather than always rolling up children revenue values to the parent. If the costs or quantities are being tracked at the terminal cost items, then those revenue values are calculated at the terminal cost items and roll up to the parent.

8.6.4 Revenue Columns

There are Revenue Forecasting columns that exist in both the CBS and Pay Item registers.

8.6.5 Cost Plus Revenue Forecast Methods

Another phrase for the billing method for Cost plus is **Time and Material** or **Time and Expenses**. Instead of having a contractual agreement of being paid a certain lump sum, you are reimbursed for your time, labor, and equipment hours and any materials that you purchased as well. With Cost plus, a markup value is typically included. You submit time cards each week to get paid for your labor hours, equipment hours, and any materials or supplies that you purchased plus any markup value that had been agreed upon.

The Cost plus Revenue Forecast Methods are only applicable to pay items that have a billing method of Cost plus. These forecast methods include:

- Billed
- Earned
- Manual

Billed Revenue Forecast Method is all of your forecast remaining revenue that is driven off your cost items. Meaning this method's calculation is the following: **1** - % **complete x Work Hours x Billing Rate**. This gives you your Forecast Remaining revenue which is your Remaining revenue you need to earn on the cost item. For the pay item, the revenue sums up all of those remaining revenues at the cost item level. It then adds anything that has been billed which is the Remaining revenue at the cost item level plus any revenue that has been billed to the pay item.

Earned Revenue Forecast Method is similar to the Billed Revenue except it uses the Forecast remaining revenue. The Earned Revenue calculation is your forecast remaining revenue at the cost item level summed up for all the cost items assigned to that pay item plus your earned revenue. The earned revenue is also driven by the cost items. To summarize, it is the forecast remaining revenue plus anything that you earned. This is also the calculation for your percent complete as well.

Manual Revenue Forecast Method manually forecasts your final revenue on that pay item with you entering in a value.

8.6.6 Forecast Revenue Sync

The forecast revenue sync pushes all of your revenue details from the Pay Items tab to an ERP system. You can start this sync from the Control Actions drop-down menu.

			CBS	ACS	PAY ITEN

	5021855	

When the project month rolls over, the last push revenue forecast sync before month-end is recorded. If a sync has not run during the month, then the system automatically takes the revenue forecast snapshot based on the date and time.

After the revenue snapshot has been recorded, you can look at past snapshots to view previous values. For example, in the pay items register you can view current and previous Revenue snapshots using the Revenue snapshots in the drop-down menu.

	PAY I	TEMS	CHANGE REGISTER
	Revenu	ie snapshot:	Current revenue forecast

The billed date shows the earliest build of the project when the snapshot was taken and includes any pay items in the pay item register. The snapshot might not include back-dated bills or newly created pay items. The snapshot might include deleted pay items.

	PAY ITEMS	CHANGE REGISTER	AUD	IT LOG
		may not include back-dated ed pay items, and it may include	Billed date:	
-0	ader and drop it here t	to group by that column		

For example, February has ended and the snapshot was taken it is now March and you backdated a bill, such as billed revenue or billed quantity into February. The backdated bill is not included in February's snapshot because the snapshot had already been taken.

The snapshot is automatically recorded by month and year. Whenever the month ends, the monthly Revenue snapshot shows in the revenue snapshot drop-down list.

The snapshot records the revenue columns for pay items. The columns are the following:

- Forecast final revenue
- Forecast remaining revenue
- Forecast revenue earned
- Forecast unit revenue
- Percent margin
- Forecast final margin

The snapshot records the information automatically based on your fiscal calendar settings.

8.7 REVENUE FORECAST PROBABILITY

Revenue can come from Control or Change. Only Contract Adjustments have revenue. You can also adjust your pay item values in a Contract Adjustment. For example a drop down field called Approval Probability is a drop down of all your revenue categories and their associated probability. This drop down field displays the Approval probability by percentage and associated name.

Net Budget change \$ 0.00	Net Quantity change No	Net Man hour change 0.00	Markup \$ 0.00	Fee \$ 0.00	Net Contract change \$ 0.00	Approval probability

lss	ie #						
Descr	iption					500	
Des							

Follow the steps below to select an approval probability.

Approval Probability

- 1. Select the Actions drop down menu.
- 2. Hover over Budget move and contract adjustment, then click Contract Adjustment.
- 3. In the Approval probability drop down, select the percentage and associated name.
- 4. In step 3, select the add icon to add either new or existing pay items.
- 5. Enter a value into the **Adjusted total price** text box.
- 6. Either save as **Draft** or select the **Submit** button. Now it shows the selected approval probability in the Change Register. It also displays in the line item slideout. This updates automatically based on status changes.
- 7. If your line item is approved, it has a 100.00% in the Approval Probability column.
- 8. If a Contract Adjustment has been **revised** or **rejected**, then the line item has a 0.00% in the Approval Probability column.

NOTE That Contract Adjustment's revenue is never going to be earned or added to the pay items because a new Contract Adjustment has been created.

- 9. If your line item is in a **Draft** or **Pending** state, the Approval Probability column displays the approval probability you selected for that line item.
 - **NOTE** If you don't select an approval probability, the Approval Probability column is blank.

Your Approval Probability drives the price you include in your Forecast Final Revenue. For this next example, we are going to include the Unapproved Revenue into the Forecast Final Revenue. In the Pay Items Register, the Unapproved Revenue column calculates all the Contract Adjustments. The column adds up all Contract Adjustments that include the pay item and the adjusted price that has note yet been approved. The Unapproved Revenue column calculates anything that is in a **Draft** or **Pending** state.

In Pay Item Details, the Change Orders, you can view the following details:

- Total price change
- · Total unit price change
- Total pay quantity change
- Approval probability
- Adjusted forecast final revenue
- Status

2345 2345						
otal Price		Pay Quantity		Unit Price		
3,000.00		1.00		\$ 3,000.00		
	DETAIL	S ATTRIBL	JTES CHANGE C	RDERS COST I	TEMS	
Issue #	Total price change	Total unit price change	Total pay qty change	Approval probability	Adjusted forecast final revenue	Status
	\$ 1,000.00	\$ 0.00	0.33	1.00 %	\$ 10.00	🗾 Draft
		(0.2.000.00)	0.00	v2 0.00 %	\$ 0.00	Pending
	\$ 0.00	(\$ 3,000.00)				
	\$ 0.00	(\$ 3,000.00)	0.00	0.00 %	\$ 0.00	Revised

The Forecast Final Revenue is the sum of all the Adjusted Forecast final revenue. Calculating the Unapproved Revenue with the Forecast Final Revenue provides you with a more accurate look at the revenue you will see when the Contract Adjustment is approved. Nothing is added into the Total Pay Item Price until it is approved.

Approval Probability drop down is only available in the Contract Adjustment. Everywhere else it is read only. To manually adjust the Contract Adjustment, go to the **Change Register**. Then right click the line item you want to change and select **Revise**. The Contract Adjustment can also automatically change based on status changes.

The Revenue Category Name and probability percentage drives the Approval Probability. The Revenue Category Name draws from the Revenue Categories in the Master Data libraries.

Revenue Forecasting InEight U - Revenue Management Course

8.8 TIME PHASED BUDGET

Time phased budget lets you plan out where to spend money in the months of the active fiscal calendar for the project.

The point of being able to time phase your budget is so that you can plan out your budget cost per cost item. You are spreading out your budget over the course of the project for each cost item.

8.8.1 Budget organization setting

The time phased budget feature includes an organization setting located in the Project tracking tab of the Control settings. The organization setting sets the default for all the projects within that organization.

You can also change the budget setting at the project level. If you are starting new projects in your organization, you need to have Time phasing budget switched on.

By default all the projects that are created under that organization also have the time phased budget switched on. This is the same for when budget is switched off.

Time phasing		
Enable time phasing for the followin	g:	
Budget	Edit past Time phased budget values	Θ

8.8.2 Edit Past Time Phased Budget Values

The Edit past Time phased budget values toggle lets you edit past fiscal period time phased budget values.

Time phasing			
Enable time phasing for the following: Budget (j)	\bigcirc	Edit past Time phased budget values	Θ

When this setting is turned on, you can edit your past time phased budget values via a budget move or a contract adjustment in the time phased budget step, with the proper permissions.

C	hange register	Contract adjustment									
				Net bud \$ 0.00	lget change Net No	quantity o	change Net man hour c 0.00		Fee Net co \$ 0.00 \$ 0.00	entract change	e Approval probability
						2000	ils 2 Cost items				0
						Detai	2 Cost items	3 Time phased	budget 4) Pay items	5 Summary
	CBS	Description	WBS	Start			Januar		budget 4) Pay items Februar	
		Description	WBS phase code	Start				y 2022	Cost		
	CBS	Description Resurface Existing Access road	phase	Start 10/16/2022			Januar	y 2022	Cost	Februa	ry 2022

Selecting the new Rebaseline icon resets the cost item's time phased budget distribution based on the Start and Finish dates against that cost item. Rebaselining lets you amend your time phased budget distribution costs for a cost item.

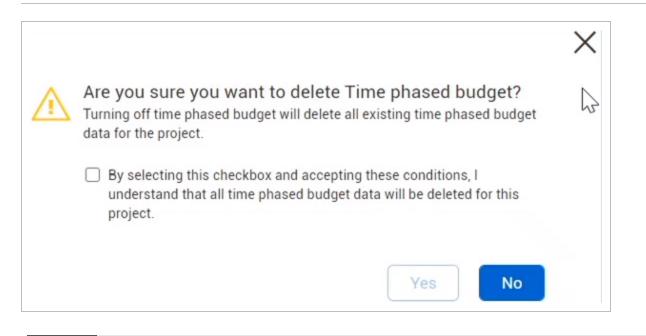

You can also edit any of the Adjusted cost values manually for past months.

80									
-	CBS	Description	Start	Finish	April 2022		May 2022		
	position 7				-	Adjusted cost 📃	Cost	Adjusted cost	
	2.3.1.1.1	Resurface Existing Access	10/16/2022	11/15/2022	\$ 205.48	\$ 0.00	\$ 212.33	\$ 0.00	
	2.3.1.1.2	Maintain Access Road	05/01/2022	12/31/2022	\$ 0.00	\$ 471.92	\$ 0.00	\$ 975.31	

At the project level, the time phased budget inherits the organization settings, but still lets you switch the budget setting *on* or *off* at the project level. For example, you can have time phased budget turned on at the organization level and you can turn it off at the project level.

8.8.3 Switching off time phasing budget

If the Time phasing budget is switched on, that means there is time phasing budget data in the database. If you turn it off time phasing budget at the project level, it gives you the following warning message:

NOTE All of your time phased budget data is going to be deleted if you switch time phased budget off. You must select the check box in the warning dialog acknowledging that you understand and accept these conditions.

If you still want to turn off the time phasing budget, you can select **Yes** and then click **Save**. This will delete the time phasing budget data from the database.

8.8.4 Switching on the time phasing budget

If you want to turn on time phased budget, the following dialog box appears if there are any missing start or end dates:

Α	Cost items are missing start and end dates. How would you like to populate the missing cost item start and end dates
~	How would you like to populate the missing cost item start and end dates
	 Default all budget to current fiscal period
	 Default to project start and end dates
	 Go back and populate the missing dates

Every cost item in your project needs the start and finish date entered to use that data in the time phase budget.

When time phased budget data is calculated, the calculation is based off of the data in the current budget and total cost for the cost item. Then, the cost is distributed to the cost items start date, finish date, and cost curve.

Time phased b	- Sec	<•>		
B total cost	Start	Finish	Cost curve	Pending budget cost

\$ 25,020.00	01/01/2020	07/30/2021	Back Loaded	(\$ 5,060.00)
\$ 5,050.00	12/30/2020	12/31/2020	Front Loaded	\$ 4,640.00
\$ 5,120.00	01/01/2021	05/31/2021	Linear	\$ 540.00
\$ 1,600.00	12/01/2020	03/31/2021	Custom curve 1	\$ 10.00
\$ 1,000.00	12/01/2020	05/15/2021	Bell Shaped	\$ 10.00
\$11,000.00	12/01/2020	03/31/2022	Custom curve 2	\$ 10.00

8.8.4.1 Default all budget to current fiscal period

The first option you have is to default all of the budget to the current fiscal period. Then, all cost items that don't have defined start and finish dates have the current budget going to the current fiscal period.

For example, if you look at WBS phase code 1007, you would have \$100,000 put into December 2020.

Гask	S		:	Time phased b	udget	< • >		
		Description	WBS phase	CB total cost	Start	Finish	Cost curve	Pending budget cost
	¥ 1	Electrical devices	1000	\$ 48,790.00	01/01/2020	03/31/2022	Linear	\$ 150.0
	1.1	Install conduit	1002	\$ 25,020.00	01/01/2020	07/30/2021	Back Loaded	(\$ 5,060.00
	1.2	Fiber optic cable-1	1001.1	\$ 5,050.00	12/30/2020	12/31/2020	Front Loaded	\$ 4,640.00
	1.3	Pull cable	1003	\$ 5,120.00	01/01/2021	05/31/2021	Linear	\$ 540.00
	1.4	CCTV devices	1004	\$ 1,600.00	12/01/2020	03/31/2021	Custom curve 1	\$ 10.0
	1.5	Terminations	1005	\$ 1,000.00	12/01/2020	05/15/2021	Bell Shaped	\$ 10.0
	1.6	Light poles	1006	\$ 11,000.00	12/01/2020	03/31/2022	Custom curve 2	\$ 10.0

	4	Craft training	1013	\$ 17,500.00			Linear	\$ 0.0
	5	ST&S	1014	\$ 45,000.00			Linear	\$ 0.0
_								

8.8.4.2 Default to project start and end dates

The next option is to default to the start and end dates. On the project details page you define all the project start and end dates. After those are defined, then we can default all of those missing start and end dates to just the project start and end dates.

8.8.4.3 Populate missing dates manually

You can also return to the Time phased budget step and manually populate the missing dates. If you choose this option, the budget setting turns off again (if it wasn't already turned off and on again in previous sections). You then have to go into the CBS and manually enter all the start and finish dates. Then, you could turn the budget setting back on and it should distribute the budget.

NOTE Time phased budget data currently can only be seen in the CBS contract adjustment.

8.8.5 Time phased budget in contract adjustment

From the CBS, select cost items to adjust in the contract adjustment.

ask	S				Time phased b	udget	< • >		
	⊗ CBS position	-	Description	WBS phase	CB total cost	Start	Finish	Cost curve	Pending budget cost
	✓ 1		Electrical devices	1000	\$ 48,790.00	01/01/2020	03/31/2022	Linear	\$ 150.00
2	1.1		Install conduit	1002	\$ 25,020.00	01/01/2020	07/30/2021	Back Loaded	(\$ 5,060.00)
2	1.2		Fiber optic cable-1	1001.1	\$ 5,050.00	12/30/2020	12/31/2020	Front Loaded	\$ 4,640.00
2	1.3		Pull cable	1003	\$ 5,120.00	01/01/2021	05/31/2021	Linear	\$ 540.00
	1.4		CCTV devices	1004	\$ 1,600.00	12/01/2020	03/31/2021	Custom curve 1	\$ 10.00

Then select the **Actions** drop-down, hover over the **budget move and contract adjustment** and then select **Contract adjustment**.

	Actions 🔹 🕂 🔀 🛞

ŀ			0

In the contract adjustment, there is an area called Change order attributes. This area lets you set your change orders/contract adjustment to the following:

- Start date
- Finish date
- Cost curve

1 Deta Choose your Contrac	t adjustment workflow	me phased budget (4 Pay items 5 Summary	
Start with Cos Enter markup and	st items fees on cost items to generate pay	/ item price		
Start with Pay Adjust pay item pr	/ items ice before adjusting cost item bud	gets		
Change order attribut	tes			
Start date	Finish date		Cost curve	
2020 • Decem	ber 👻 2020 👻	December 🔻	Linear	•
Contract adjustment	details			
,				

Cost Curve can be adjusted in many ways. If you select **Bell Shaped** the cost adjustments increase during the summer months and then decreases in the winter months.

Linear	•
Linear	-
Front Loaded	
Back Loaded	
Bell Shaped	
Custom curve 1	
Custom curve 2	

In step 3 of the contract adjustment, the Time phased budget step can be used for both Start with Cost items work flow and the Start with Pay items work flow. You can adjust your time phased budget in either contract adjustment work flow.

NOTE

The only time your time phased budget should change is when you get change orders and you have to change your overall budget amount.

For the Start dates, you cannot put budget in the past. If you try to select a month that has already passed, you will get an error stating Start date must be in an open fiscal period.

Start date			Finish date	e			Cost curve	
2020	-	January	2021	-	December	-	Linear	

Finish date has to be greater than your start date otherwise you get the following error.

Finish date	Cost curve	
2020 🔻 December 🔻	Linear	-
Finish date cannot be earlier than start	date	

Move onto step 2 Cost Items. You can add Adjusted CB total cost. In this example we are adding \$100 to each cost item.

+)	Ass	ign cost to 🔻				
	CBS position	Description	WBS phase code	CB total cost	Adjusted CB total cost	Markup %
Unass	igned cost items					
	1.2	Fiber optic cable-1	1001.1	\$ 5,050.00	\$ 100.00	
	1.1	Install conduit	1002	\$ 25,020.00	\$ 10	
	1.3	Pull cable	1003	\$ 5,120.00	\$ 100.00	
	1.4	CCTV devices	1004	\$ 1,600.00	\$ 100.00	
	1.5	Terminations	1005	\$ 1,000.00	\$ 100.00	
	1.6	Light poles	1006	\$ 11,000.00	\$ 100.00	

In the Time phased budget step, the 100 dollars now has to be distributed. Scroll over to the Distribution type column.

NOTE In step 3, only TERMINAL cost items will be brought into that grid. Non-terminal cost items do not show on the Cost items grid of the contract adjustment.

						etails 2 Cost ite	ems 😗 Time p	bhased budget 4 F	Pay items 5 Summ	ary
_	CBS	Description	Start	Finish	Cost	Distribution	CB total	November 2020	Decemb	er 2020
	position 7		-		curve	type	cost	Cost	Cost	Adjusted cost
	1.1	Install conduit	12/27/2020	12/25/2021	Linear	Change order	\$ 25,020	\$ 0.00	\$ 0.00	\$ 0.0
	1.2	Fiber optic cable-1	12/27/2020	12/25/2021	Linear	Change order	\$ 5,050	\$ 0.00	\$ 0.00	\$ 0.
	1.3	Pull cable	12/27/2020	12/25/2021	Linear	Change order	\$ 5,120	\$ 0.00	\$ 0.00	\$ 0.
	1.4	CCTV devices	12/27/2020	12/25/2021	Linear	Change order	\$ 1,600	\$ 0.00	\$ 327.43	\$ 0.
	1.5	Terminations	12/27/2020	12/25/2021	Linear	Change order	\$ 1,000	\$ 0.00	\$ 14.43	\$ 0.
٦.	1.6	Light poles	12/27/2020	12/25/2021	Linear	Change order	\$ 11,000	\$ 0.00	\$ 588.48	\$ 0.

There are three different Distribution types:

- Change order (default setting)
- Cost Item
- Manual

When Distribution type is set to **Change order**, it means it is pulling in the start date, finish date, and cost curve from the details step of your change order.

The changes to the Adjusted total cost column are then distributed throughout the start and finish date and shows in the Adjusted Cost column.

If your cost curve was set to **linear**, roughly the same amount of cost goes into the same fiscal period. Since some months are longer than others, they will have additional cost.

8.8.6 Time phased budget at the budget move

Time phased budget is included for both the non-associated and associated budget move.

The total adjusted CB total cost must be zero before you can move budget. This shows as a net zero budget adjustment when you are moving budget from cost items to other cost items. You can also move the time phased budget.

You can set the start date, finish date, and cost curve for the budget move change orders.

		e workflow			
	ciated budget moves with	h a From and To process t	to provide ultimate tracea	bility of budget moves.	
Non- Define	Associated	ely to provide the most fle	xibility.		
<u> </u>	budget moreo nee				
Change orde Start date		Finish date		Cost curve	
Change orde			▼ December ▼	Cost curve Linear	
Change orde Start date 2021	er attributes April	Finish date			
Change orde Start date	er attributes April	Finish date			

The Time phased budget step is similar to the Time phased budget step for Contract adjustment. The distribution type on this step is where you can select to distribute by the change order attributes or the cost item attributes. You can also manually adjust your cost.

										\$ 0.00 Fel	b 2021 - Aug 2021 🝷	View Cost colu	nn 🧲
CBS position	Description	WBS phase code	Start	Finish	Cost curve	Distril type	February 2021 Cost	Cost	March 2021 Adjusted co	est Cost	April 2021 Adju	sted cost =	Cost
41		01			Linear	Cost if			\$ 1,500.00	\$ 0.00	\$ 0.00	\$ 0.00	
42		02			Front Loaded	Cost it				٥		\$ 0.00	

When you adjust the budgeted cost either through a contract adjustment or a budget move, you can adjust the cost over the different fiscal periods and decide where to place the adjusted cost.

8.8.7 Time phased budget grids

In the left side gird, you have many of the cost item details in columns. This includes the following columns:

- CBS position
- Description
- WBS phase code
- Start
- Finish
- Cost curve
- Distribution type
- CB total cost
- Adjusted CB total cost
- Pending budget cost: any outstanding budget cost that has not yet been approved. For example, if you have another pending contract adjustment, it adds those values in this column.
- Phased budget cost delta

	CBS position	Description	B total	Adjusted CB total cost	Pending budget cost	Phased budget
כ	1.1	Install conduit	\$ 25,020.00	\$ 100.00	(\$ 5,060.00)	\$ 0.00
)	1.2	Fiber optic cable-1	\$ 5,050.00	\$ 100.00	\$ 4,640.00	\$ 0.00
)	1.3	Pull cable	\$ 5,120.00	\$ 100.00	\$ 540.00	\$ 0.00
)	1.4	CCTV devices	\$ 1,600.00	\$ 100.00	\$10.00	\$ 0.00
]	1.5	Terminations	\$ 1,000.00	\$ 100.00	\$10.00	\$ 0.00
]	1.6	Light poles	\$ 11,000.00	\$ 100.00	\$ 10.00	\$ 0.00

You can adjust the amount of columns you see using the slider to move between the left side grid and the right side grid.

The right side grid shows your cost and adjusted cost columns. Your cost columns show current cost that has been approved.

For example, in the **CB total cost** column, if you have \$1,000 approved, the cost columns for each month distributes that cost throughout each month.

				(1	Details 2 Cost iter	ns 3 Time phased	d budget (4) Pay ite	ems 5 Summary				Ę
										\$ 0.00 Dec 2020	- Dec 2021 - View 0	Cost column

	position		cost	total cost	Cost	Adjusted cost	Cost	Adjusted cost	Cost	Adjusted cost	Cost 📃	Adjusted cost
	1.1	Install conduit	\$ 25,020.00	\$ 100.00	\$ 0.00	\$ 0.00	\$ 0.00	\$ 9.62	\$ 0.00	\$ 7.69	\$ 0.00	
	1.2	Fiber optic cable-1	\$ 5,050.00	\$ 100.00	\$ 0.00	\$ 0.00	\$ 5,050.00	\$ 9.62	\$ 0.00	\$ 7.69	\$ 0.00	
	1.3	Pull cable	\$ 5,120.00	\$ 100.00	\$ 0.00	\$ 0.00	\$ 1,017.22	\$ 9.62	\$ 949.40	\$ 7.69	\$ 949.40	
	1.4	CCTV devices	\$ 1,600.00	\$ 100.00	\$ 327.43	\$ 0.00	\$ 440.77	\$ 9.62	\$ 352.62	\$ 7.69	\$ 428.81	
2	1.5	Terminations	\$ 1,000.00	\$ 100.00	\$ 14.43	\$ 0.00	\$ 187.96	\$ 9.62	\$ 387.76	\$ 7.69	\$ 312.69	
7	1.6	Light poles	\$ 11,000.00	\$ 100.00	\$ 588.48	\$ 0.00	\$ 792.18	\$ 9.62	\$ 633.74	\$ 7.69	\$ 633.74	

8.8.8 Changing Distribution type to cost item

You can change the auto distribute type to Cost item if you want your adjusted budget to use attributes from the CBS.

To do this, you can select one, many, or all of your cost items in the left side grid, and then click on the **auto distribute** icon. Then select **Cost item**.

Change order	Description	Start
Cost item	Install conduit	12/27/2020
1.2	Fiber optic cable-1	12/27/2020
1.3	Pull cable	12/27/2020
1.4	CCTV devices	12/27/2020
1.5	Terminations	12/27/2020
1.6	Light poles	12/27/2020

Your Distribution type has changed to cost item. You are now distributing your adjusted budget based on the cost item attributes that are pulling in from the CBS.

CBS position	Description	1	Finish	Cost curve	Distribution type	CB total cost
1.1	Install conduit	020	07/30/2021	Back L	Cost item	\$ 25,02
1.2	Fiber optic cable-1	020	12/31/2020	Front	Cost item	\$ 5,050
1.3	Pull cable	021	05/31/2021	Linear	Cost item	\$ 5,12
1.4	CCTV devices	020	03/31/2021	Custo	Cost item	\$ 1,60
1.5	Terminations	020	05/15/2021	Bell Sh	Cost item	\$ 1,000
1.6	Light poles	020	03/31/2022	Custo	Cost item	\$ 11,000

This also changes how the Cost curve distributes the adjusted cost. As you can see from the screenshot above, some cost curves have been adjusted.

8.8.9 Manual distribution of cost adjustment

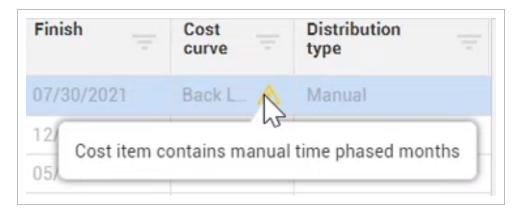

You can change a specific cost item's cost adjustment to zero and then manually redistribute that zeroed cost to other months. If you do not distribute the cost to other months, the following missing amount for the adjustment cost is highlighted in orange.

	 View Cost column 	Dec 2020 - Dec 2021	△ \$ 40.00					
	ry 2021	Februa	y 2021	Januar	December 2020			
Cost	Adjusted cost	Cost	Adjusted cost	Cost	Adjusted cost	Cost 📃		
	þ I	\$ 0.00	\$ 50.00 •	\$ 0.00	\$ 10.00 •	\$ 0.00		
	\$ 0.00	\$ 0.00	\$100.00	\$ 5,050.00	\$ 0.00	\$ 0.00		
	\$ 18.54	\$ 949.40	\$ 19.87	\$ 1,017.22	\$ 0.00	\$ 0.00		
	\$ 22.04	\$ 352.62	\$ 27.55	\$ 440.77	\$ 20.46	\$ 327.43		
	\$ 38.78	\$ 387.76	\$ 18.80	\$ 187.96	\$ 1.44	\$14.43		
	\$ 5.76	\$ 633.74	\$ 7.20	\$ 792.18	\$ 5.35	\$ 588.48		

After redistribution, there are some manual indicators showing what the value was before the change.

Start	Finish	Cost	Distribution	Decem	ber 2020	Januar	y 2021	Februar	y 2021
		curve	type	Cost	Adjusted cost	Cost	Adjusted cost 👘	Cost	Adjusted cost = Co
		Back L 🛕	Manual	\$ 0.00	\$ 10.00 •	\$ 0.00	\$ 50.00 •	Value before:	
12/30/2020	12/31/2020	Front	Cost item	\$ 0.00	\$ 0.00	\$ 5,050.00	\$ 100.00	\$ 0.00	\$ 0.00
01/01/2021	05/31/2021	Linear	Cost item	\$ 0.00	\$ 0.00	\$ 1,017.22	\$ 19.87	\$ 949.40	\$ 18.54
12/01/2020	03/31/2021	Custo	Cost item	\$ 327.43	\$ 20.46	\$ 440.77	\$ 27.55	\$ 352.62	\$ 22.04
12/01/2020	05/15/2021	Bell Sh	Cost item	\$ 14.43	\$ 1.44	\$ 187.96	\$ 18.80	\$ 387.76	\$ 38.78
12/01/2020	03/31/2022	Custo	Cost item	\$ 588.48	\$ 5.35	\$ 792.18	\$ 7.20	\$ 633.74	\$ 5.76

The warning indicator on the cost curve column lets you know that your cost item contains manual time phased months and is not technically back loaded anymore.

8.8.10 Deltas in a adjusted cost columns

Deltas appear on a contract adjustment when the adjusted cost for a cost item does not match the current budget total cost.

NOTE You are not allowed to submit or approve a cost item adjustment that has a delta.

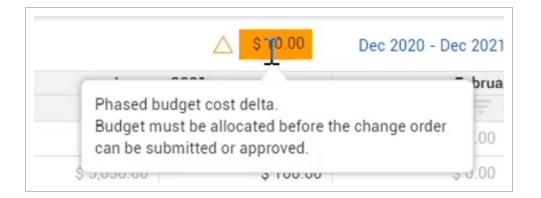

That is where the **phased budget cost delta** column displays any missing or over budgeted costs for any one cost item.

This column sums up all of your adjusted cost in the right side grid and compares it to the Adjust CB total cost.

For example, if you have \$10 not distributed, you need to add it to the adjusted cost in that same cost item before moving onto the next step. If the current budget total cost has \$100, you must spread that total cost amount throughout your months.

 View Cost colum 	c 2020 - Dec 2021	Dec 20	\$ 10.00						
y 2021	Februa		ry 2021	Januar	er 2020	Decemb	Phased budget		Adjusted CB
Adjusted cost		Cost	Adjusted cost	Cost	Adjusted cost 👘 👘	Cost	cost delta	budget cost	total cost
\$ 40.00 •	\$ 0.00		\$ 50.00 •	\$ 0.00	\$ 0.00 •	\$ 0.00	\$ 10.00		\$ 100.00
\$ 0.00	\$ 0.00		\$ 100.00	\$ 5,050.00	\$ 0.00	\$ 0.00	\$ 0.00	\$ 4,640.00	\$ 100.00

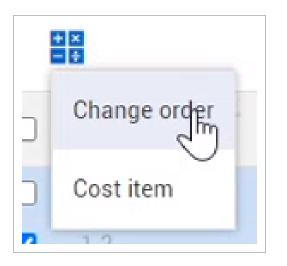

Hovering over the delta warning in the right side grid shows where the error in cost is occurring. If you have multiple deltas in different cost items, the delta cost would then sum up all delta costs.

If you attempt to submit or approve the contract adjustment with deltas and you return to the Time phased budget step, the **Phased budget cost delta** column shows which cost items have a delta. You need to resolve the deltas and redistribute the costs in the **Adjusted cost** columns in the right side grid before moving forward.

8	2 0										\$ 20.00
_	CBS	Description	-	Adjusted CB	Pending Phased budget December 2020 January 20						y 2021
	position			total cost	budget cost	cost delta	Cost		Adjusted cost	Cost	Adjusted cost
		Install conduit	20.00	\$ 100.00		\$ 10.00			\$ 0.00 •		\$ 50.00
	1.2	Fiber optic cable-1	50.00	\$ 100.00	\$ 4,640.00	10 00)	-	\$ 0.00	\$ 10.00 •	\$ 5,050.00	\$ 100.00
	1.3	Pull cable	20.00	\$ 100.00	\$ 540 Un	distributed budget remaining	g	\$ 0.00	\$ 0.00	\$ 1,017.22	\$ 19.87
Π	1.4	CCTV devices	00.00	\$ 100.00	\$ 10.00	\$ 0.00		\$ 327.43	\$ 20.46	\$ 440.77	\$ 27.55

You can also adjust your delta costs using the same Auto distribution button from earlier and selecting **Change order**. Change order always distributes without a delta.

Now you can submit and approve your contract adjustment. All those values are going to be committed into your time phased budget.

For example, if you sync into your ERP, you can receive all changes made in the contract adjustment right after those changes have been approved.

8.8.11 View cost columns

If you want to view just your adjusted cost columns, select the **View Cost column** slider to turn off your cost columns. Only the adjusted cost columns shows. These columns show what you are adjusting in the active project months for the contract adjustment.

ost column 💽	Dec 2021 - View Co	\$ 0.00 Dec 2020 -	\triangle				
July 2021	June 2021	May 2021	April 2021	March 2021	February 2021	January 2021	December 2020
Adjusted cost	Adjusted cost 👘 👘	Adjusted cost	Adjusted cost	Adjusted cost	Adjusted cost	Adjusted cost	Adjusted cost
\$	\$ 7.69	\$ 9.62	\$ 7.69	\$ 7.69	\$ 7.69	\$ 9.62	\$ 0.00

8.8.12 Date range filter

The date range filter lets you filter the right side grid to show only the months you want to see. You can view the project months based on the following options:

- This month (current fiscal month you are in)
- Next 3 months
- Next 6 months
- Next 12 months
- Through project finish date

		△ \$ 0.00	Dec 2020 - Dec 20	21 ▼ View Cost column
Timeframe				
This month	Next 3 months	Next 6 months	Next 12 months	Through project finish date
Show months		2		

You can also manually select the months you want to view using the **Show months** drop-down lists.

8.8.13 Approving budget warnings

You can't approve budget set in the past. If you have any adjusted cost set for the current month (December) and the contract adjustment is approved in the next month (January), the approver receives a warning stating *you have budget in past or closed periods*.

The contract adjustment can still be approved, but the adjusted cost from the closed month moves to the following month.

The other option the approver has is to revise the adjusted cost. When revising, the adjusted cost from December has already moved into the adjust cost column for January. If you do not want all of the previous month added into a single month, you can manually move the additional adjusted cost from January into the other open fiscal period months.

Time Phased Forecasting Review CPI and SPI Project Settings

Review

- 1. Revenue columns can only be populated for a cost item that has an assigned _____?
 - a. UOM
 - b. Unit price
 - C. Pay item
 - d. Cost curve
- 2. What are the four tabs within the Pay Item slide out?
 - a. Details, Attributes, Revenue, Cost Items
 - b. Revenue, Cost Curves, Change Orders, Cost Items
 - c. Details, Cost Curves, Change Orders, Cost Items
 - d. Details, Attributes, Change Orders, Cost Items
- 3. In the Pay item details slide out panel, which tab contains the Update earning rules option?
 - a. Details
 - b. Cost Items
 - C. Attributes
 - d. Change Orders
- 4. The ______ slide out panel is where you can record what you bill to the client
 - a. Billed revenue details
 - b. Pay item details
 - C. Forecast revenue details
 - d. Cost curve details

Summary

As a result of this lesson, you can:

- Forecast revenue and determine profit
- Manage pay item details
- Adjust pay item earning rules
- Bill customers per pay item or in mass
- Track billed revenue

SCHEDULING

Lesson Duration: 20 minutes

Lesson Objectives

After completing this lesson, you will be able to:

- Navigate to the Schedule data block
- Edit schedule data inside the CBS
- Edit schedule data using Excel import
- Integrate planning activities
- Schedule using Primavera

Lesson Topics

9.1 SCHEDULING OVERVIEW

Inside of the Control application exists the functionality to track schedule dates at a CBS level. The ability to easily add and modify this information allows you to accurately track your operations planned and completed dates.

The schedule data can either be mass imported through an Excel upload, created and modified directly within the CBS, or by way of Primavera schedule integration through and XER file import. This lesson will cover all options.

9.2 SCHEDULE DATA BLOCK

The schedule data block is where all information regarding schedule dates is contained. Some of the key fields inside this data block are:

- Schedule ID
- Planned Start Date
- Planned Finish Date
- Early Start Date
- Early Finish Date
- Late Start Date
- Late Finish Date
- Actual Start Date
- Actual Finish Date

You can add and edit this information directly inside the Schedule data block. However, this will only allow you to modify one CBS line item at a time.

The following Step by Step shows you how to add the Schedule data block, save a Scheduling view, and add various dates for a specific CBS item.

Schedule Data Block

1. From the Workspaces page of the Steel Structure Job, remove each data block from the page, except for the Tasks and Task Details data blocks, by right clicking on the **context menu**.

Curren	urrent budget < ••• >									
CB total quantity	Ŧ	CB total MHrs	CB total cost	CB MHrs/Unit	CB Unit/MHr	CB unit cost				
	1.00	0.00	\$ 250,000.00	0.00	0.00	\$ 250,000.00				
	10,000,00	0.000.00	A 400 000 00	0.02	1.00	Ó 40.00				

2. For each data block you plan to remove, select Remove Data Block

Choose columns
Filter
Save data block as
Remove data block

3. Once the data blocks are removed, click the **Add Data Block** button.

		CBS	ACS	PAY	ITEMS	CHANGE REGISTER

•	4.4	Module 01 - Erect Steel Heavy	3	800.00	Ton							0.0

6. In the schedule data block, type **your Initials.01234** in the Schedule ID field.

Schedule			< ••• >				
Scheduled	Roll up schedule	Ŧ	Schedule WBS	ļ.	Schedule ID		
					SH.01234		

7. Click the **right arrow** to move to next set of columns in the schedule data block.

Schedule					<•	
Scheduled	-	Roll up schedule	-	Schedule WBS	Ŧ	Schedule ID

- 8. Double click into each field and enter the following:
 - Start = 10/05/2020
 - Finish = 10/15/2020
 - Early Start = **10/01/2020**
 - Early Finish = **10/15/2020**
 - Late Start = **10/07/2020**
 - Late Finish = **10/15/2020**

Schedule			< ••• >		:
Start	Finish	Early start	Early finish	Late start	Late finish
10/05/2020	10/15/2020	10/01/2020	10/15/2020	10/07/2020	10/15/2020

- Entering dates on any terminal CBS item will auto-populate the parent's dates. If there are multiple terminal items under one parent, any start dates will take the earliest and any finish dates will take the latest
- Once all the initial schedule dates are entered, the schedule data block also allows for the project to track actual dates
- 9. Click the **Right Arrow** to move to next set of columns in the schedule data block.
 - You will leave these columns blank for this Step by Step

Schedule		< •••	>
Actual start	Actu	al finish	Ŧ

9.3 SCHEDULE EXCEL IMPORT

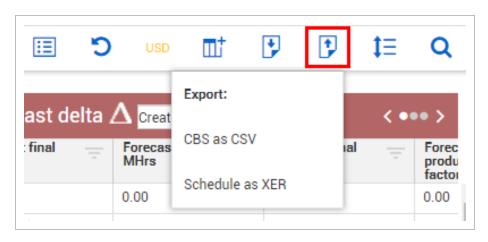

The Control application allows for an Excel import to import data into the Schedule data block. This is especially useful when bringing in large sets of data for multiple CBS items.

Excel imports can sometimes 'hang' while attempting to import CBS data. If this happens, it's possible to cancel an Excel import while the system continues the attempt to import the data.

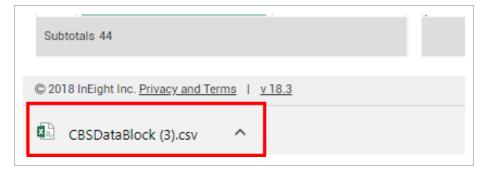

The following Step by Step covers downloading this Excel sheet, entering the necessary data, and importing it back it into Control.

Excel Import

1. From the Workspaces page, using the **Schedule** view on the CBS tab, click the **Export** button, then **CBS as CSV.**

- This creates a CBSDataBlock folder in your Downloads folder
- 2. Open the CBSDataBlock.csv file.

3. Inside the Excel spreadsheet, delete all rows except for Module [your initials] – [description].

Pa	te → Cut → Copy → → Format	Painter	Calibri B I					🖶 Wrap Text 🗄 Merge & Cen	iter 🔻	Gene \$		Condition Formattin
	Clipboard	Es.		Font	G.		Alignn	ient	E.		Number	Fail

	e:	-	

9.4 PRIMAVERA SCHEDULE INTEGRATION

The XER (file extension used by Primavera containing project file related data) import functionality allows the milestones and schedule dates (baseline and current) to be integrated into planning activities. Schedule IDs in Control are used to map Primavera Activity IDs to import and export the project information. The status of construction activities and progress are then integrated back into the InEight scheduling tools.

The Primavera schedule integration not only allows for XER file import of schedule dates but is also capable of a cost item bi-directional push and pull between Control and Primavera. XER imports integrate critical milestones and schedule dates into planning activities in the InEight cloud platform.

It's also possible for you to map the existing Control 25 CBS tag fields, and also the existing 15 user defined fields to P6. Conversely, you can create new fields in P6 based on tagging scheme. This allows you to filter Primavera and Control in similar ways, with the same sets of dates within both applications.

You also can push (Physical) % complete to P6. As you are progressing in Plan or Progress, and as quantities drive the percent complete in Control, it's possible to push the percent complete back to the associate activity in P6.

9.4.1 Primavera Schedule Integration Settings

The setting to change the schedule data source to Manual entry or an **XER file type** is in Settings > Control > Schedule > Define project schedule.

Under the Schedule data source, it's possible to manually enter schedule dates, or you can utilize the XER file type.

Define project schedule					
Schedule data source:					
XER file type					
Manual entry — Poption 1					
XER file type Option 2					

After selecting your Schedule data source, you will have the option of making sure that your schedule IDs are similar across your baseline and current schedule.

Duj	plicate field values for Baseline and Current schedule columns:
	Schedule ID and Baseline schedule ID
1	Scheduled and Baseline Scheduled
A.	Schedule WBS and Baseline schedule WBS
A.	Roll up schedule and Baseline roll up schedule

If you uncheck one of these options, and then check it back, you will be given the option to copy existing Schedule ID column values to Baseline schedule ID column, and vice versa. This is a way to ensure that data consistencies remain in check for both baseline and current monthly schedule.

		\times
\wedge	Select one:	
	Copy existing Schedule ID column values to Baseline schedule ID column	
	Copy existing Baseline schedule ID column values to Schedule ID column	
	Close OK	

Under Percent complete, you can either update the XER file with physical percent complete from Control, or not.

Under the second dropdown for Update XER activities, you have the option to update XER with tags and user defined fields from Control, or not to.

Percent complete:		Update XER activities with cost item tags and user defined fields from Control:	
Do not update percent complete	•	Do not update tags or user defined fields	
Update XER with physical percent complete from Control		Update XER with tags and user defined fields from Control	
Do not update percent complete		Do not update tags or user defined fields	

If you choose to update XER with tags and user defined fields, the Define tags and user defined export rules table appears. The 3 options to choose from are to match using Control field name, match using external system field name, or do not export.

If you choose to map to an external system field (as shown below using Tag 15 for the second record), you will need to manually type in the name of the field first. Because this is not an API, the system is not aware the existing fields within P6. Therefore, you need to self-determine which Control values you want to populate in P6.

Percent	complete:		Update XER activities wi Control:	ith co	ost item tags and user defined field	s from

9.4.1.1 Primavera XER Schedule Integration Prerequisites

1. XER file type or manual entry must be selected in Settings > Control > Schedule, in the Schedule data source section.

PROJECT TR/	ACKING ESTIMATE	RESOURCES	SCHEDULE	OTHERS
Define project cohe	dulo			
Define project sche	dule			
Schedule data source:				
XER file type		•		
Manual entry				
Manual enu y				

2. On the Schedule data block, the **Scheduled column** must be checked prior to importing a schedule.

Schedule					< ••• >		
Scheduled	Ŧ		-	Sched plug days	Plug days	Start	Finish
•		PS.1		I all a second a seco	21,682.50	07/18/2019	07/18/2019
I		PS.2		×.	0.00	07/18/2019	07/18/2019
•		XYZ			0.00	07/18/2019	07/18/2019

3. The Schedule ID in Control must match the Activity ID in the XER file.

Schedule					< ••• >		
Scheduled		Schedule ID	T	Sched plug days	Plug days	Start	Finish _
	1	PS.1		¢.	21,682.50	07/18/2019	07/18/2019
•		PS.2		4	0.00	07/18/2019	07/18/2019
	:	XYZ			0.00	07/18/2019	07/18/2019

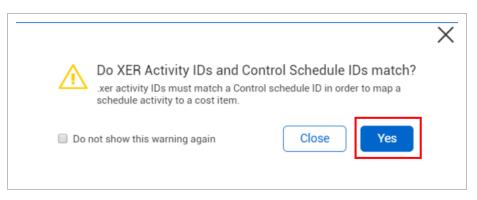

The following steps walk you through how to import a Primavera .XER file into Control.

Schedule Integration Import

1. From the CBS tab of the Control Workspaces page, select the **Import icon** on the top right menu bar, then click **Schedule**.

	Ţ	↓AZ		•	•	‡≡	Q	
	<•	• >	Import:					
JIE WBS	Ŧ	Schedule I	Cost items	Sche Jays	dule plug	-	Plug	
			Actuals		A			•
			Schedule		4			
					af.			

2. A warning message appears asking if the XER Activity Ids and Control IDs match. Click **Yes** if both IDs match before continuing.

3. In the Import schedule data window, click on the **Browse** icon in the Drag and drop file portion of the screen.

Im	port schedule data

Step 6: Inserting data to project tables	Complete
This may take some time. You may coprocessing. Status update is also available in the li	ntinue to make changes to your project while the import is mort history

- Check the Control: Schedule block for newly imported scheduled dates
- This is a quick audit to make sure that the desired Primavera dates imported successfully into Control

Tasl	s	:	Schedule		< •	•• >		
	CBS position	Description	Scheduled	Schedule ID	Schedule plug days	Plug days	Start	Finish
	<u>^1</u>	Financial Results A	×	PS.1	Ø	21,682.50	07/18/2019	07/18/2019
	≜ 1.1	10 - Commercial C	•	PS.2	v	0.00	07/18/2019	07/18/2019
	1.1.1	Dependent G&A		XYZ		0.00	07/18/2019	07/18/2019

The following steps walk you through how to export a Primavera .XER file from Control.

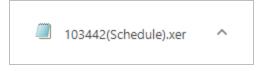

Primavera Schedule Integration Export

1. From the CBS tab of the Control Workspaces page, select the **Export icon** on the top right menu bar, then click **Schedule as XER**.

- 2. Assuming you have Percent Complete and User defined Fields and tags turned on in your settings, click **Export**.
 - Depending on what you'd like to export, you can always uncheck undesired options

		\times
\wedge	Export with the following fields:	
	Cost item hierarchy and description	
	Percent complete	
	User defined fields and tags	
	Cancel	

• After selecting Export, an XER file will generate and be placed within your C:/Downloads folder. The file will be named <job name>(Schedule).xer

• At this point you are ready to import the XER file into Primavera

9.4.2 Percent Complete column updates in CBS

If you are progressing your schedule in P6, it's possible to import this progress data directly into Control using the Schedule Integration Import process. The % Complete column records within the CBS can receive updates from the P6 XER file. The XER file can originate from Primavera or InEight Schedule. As long as the % Complete data is captured within the XER file, it will update the CBS with this new schedule information.

Fasks				Actuals 9/2/2019 to 1/12/2020				< ••• >	
	♦ CBS position	Description	WBS phase	Schedule ID	% Complete	Qty complete (to date)	Start	Finish	
	^1	Financial Results An	1000	PS.001	0.45 %	0.00	10/01/2019	08/25/2020	
	∧ 1.1	INDIRECTS & UNASS	1001	PS.002	0.76 %	0.01	10/01/2019	08/25/2020	
	~ 1.1.1	Commercial Cost	1002	PS.003	2.30 %	0.00	10/01/2019	10/15/2019	
	1.1.1.1	Direct Pickup	1016	PS.013	100.00 %	30.50	10/01/2019	11/29/2019	

By not using this feature, the % Complete column updates from P6 will not populate the % Complete column within Control. You would need to update the CBS with the % Complete or claimed quantity via other methods for completing progress measurement which are addressed in the <u>Progress</u> <u>Measurement & Forecasting User Guide</u>.

This feature allows for the Schedule Import process to align the P6's schedule % complete with the cost item's % Complete.

After running the Schedule Integration Import process, you can check the CBS and verify the progress results in the % Complete column.

Review

- 1. Where can you enter schedule dates for your cost items?
 - a. Cost item details
 - b. Task details data block
 - C. Schedule data block
 - d. On the Schedule tab
 - e. On the Schedule slide out panel
- 2. Using the Control Import feature, you can import which of the following types of data?
 - a. Tasks
 - b. Current Estimate
 - C. Schedule
 - d. Cost Categories
 - e. All of the above
- 3. When importing a Primavera schedule, the **Schedule ID** in Control must match the ______ in the XER file.
 - a. Import ID
 - b. Current Estimate ID
 - C. Task Details ID
 - d. Activity ID
 - e. Start Date ID
- 4. When using the **Define project schedule: Schedule data source** feature, which option allows you to export a Primavera formatted file to eventually be used to import directly into Primavera?
 - a. Manual entry file
 - b. XER file type
 - C. Activity ID file type

- d. Task Details file type
- e. Schedule file type

Summary

As a result of this lesson, you can:

- Navigate to the Schedule data block
- Edit schedule data inside the CBS
- Edit schedule data using Excel import
- Integrate planning activities
- Schedule using Primavera

This page intentionally left blank.

ACCOUNT CODE STRUCTURE (ACS)

Lesson Duration: 30 minutes

Lesson Objectives

After completing this lesson, you will be able to:

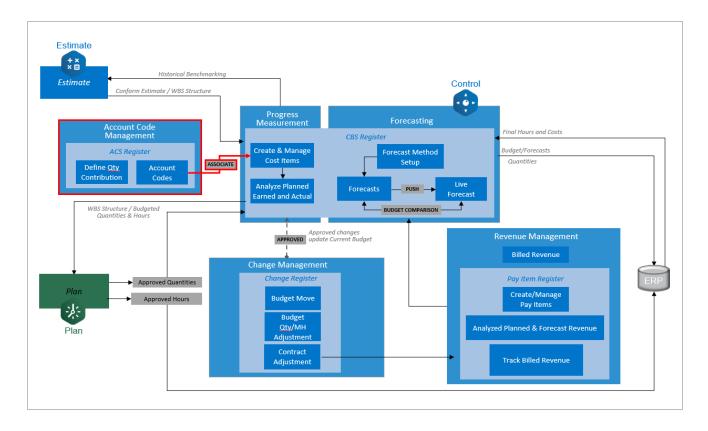

- Define what an account code is
- Set up account codes within the library
- Assign account codes to cost items
- Define the quantity contribution for each account code
- Review and analyze the audit log

Lesson Topics

10.7 Measurement Types	
10.8 Cost Category Label Customizations	
Review	
Summary	

10.1 INEIGHT CONTROL WORKFLOW - ACCOUNT CODE STRUCTURE

10.2 WHAT IS AN ACCOUNT CODE?

Account Codes serve as a standardized coding system to track like operations across a company, for the purpose of global reporting and benchmarking. Account Codes typically follow a hierarchical structure which allows for summary level reporting rolled up to company standards, but can also be a flat list.

Account Codes are assigned to cost items similar to a tag on a cost item. Once an account code has been assigned to all terminal cost items you can view many project and organization reports organized by the account code structure, rather than individual project cost break down structure which often differs from project to project. Account Codes can also tie back to InEight Estimate where estimators can assign the same standard set of account codes to estimate items, and compare them to active or completed projects for historical benchmarking.

10.3 ACCOUNT CODE SETUP

The master set of account codes is created and stored under Master data libraries > Account Codes.

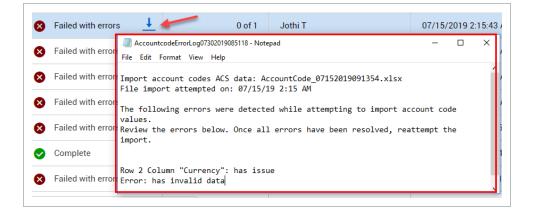

Steel Structure Training Job (1	05091) 🔻	Project home 👻	1
-avorite projects & orga	nizations	Master data libraries	
C-XYZ	>	Account codes	Units of measure
		Cost centers	Vendors

Report	>	Operational resources	
(a) Explore	>	Qualifications	
Master data libraries	>	Revenue categories	
Suite administration	>	Unions	

10.3.1 Staging vs. Published Account Codes

The Account Codes master data library contains four tabs: Published, Staging, Audit Log, and Import Log.

Ś	Master data libraries		▼ Account codes ▼				
			PUBLISHED	STAGING 999	AUDIT LOG		IMPORT LOG
	Account code	Description	1		UoM primary	Currency	
	00	Overhead			PLS	US Dollar	
	00.0000000	00000000	DES-1		PLS	US Dollar	
	00.00000000.MRTER 0	MRTER (0		PLS	US Dollar	

- The Published tab lists all account codes that have been created and published under the Staging tab.
- Under the **Staging** tab, you create and edit account codes, and then publish them for use. Account codes are not available for use in projects until they are published
- The **Audit Log** tracks changes made to the Account Code Structure, including the value before and after, the changed date, and who made the change
- Under the Import Log tab, you can track the status of all the account code import processes.
 - When you hover over the **Failed with errors** imports, a pop-up will provide a brief import status, along with next steps
 - Under the pop-up, there is a down facing blue arrow where you can download a detailed error log

Account codes are typically maintained at an organization administration level to ensure that categories and codes remain consistent with company standards.

The account codes within the Account Code Structure are arranged into a hierarchy of parent-child relationships that can contain varying levels of detail, indicated by color, for each level of the hierarchy. You can assign account codes to cost items anywhere, from the highest level to the lowest level. The lower the level assigned, the higher the level of detail associated to the account code.

The example below shows a level 3 account code (50.03.04) acting as a parent to two subordinate account codes (50.03.04.002 and 50.03.04.004).

ccount code	Description
50.03.02.004.02	Break - Concrete Paving Removal
50.03.02.004.04	Load out - Concrete Paving Removal
50.03.04	Paving Milling and Scarification
50.03.04.002	Paving Milling and Scarification - Asphalt
50.03.04.004	Paving Milling and Scarification - Concrete
50.03.06	Utility Line Removals - Underground
50.03.06.002	Utility Line Removals - Underground (<4' Depth)
50.03.06.002.02	Utility Line Removal (<4' Depth)
50.03.06.002.04	Storm Sewer Removal (<4' Depth)

The following Step by Step walks you through how to create a new account code.

Create an Account Code

- 1. From the Project home page, select the **1st Level drop-down menu.**
- 2. Select Master Data Libraries.
- 3. Select Account Codes.

Steel Structure Training Job (10)5091) 👻	Project home 🔻

ור	62.03.04.004.08	Module Assembly - Erect Steel - Erect Steel - Extra Heavy (80-119 lb/LF)	Ton	US Dollar		0n	On		Off	

6. Click the Add Account Code button.

•			
	Account code =	Description -	Uol
	62.03.04.004	Module Assembly - Erect Steel	Tor
	62.03.04.004.02	Module Assembly - Erect Steel - Erect Steel - Light (0-19 lb/LF)	Tor
	62.03.04.004.04	Module Assembly - Erect Steel - Erect Steel - Medium (20-39 lb/LF)	Tor
	62.03.04.004.06	Module Assembly - Erect Steel - Erect Steel - Heavy (40-79 lb/LF)	Tor

- This creates a new account code with the code you selected as the parent
- In the Account code details slide out panel, the following can be assigned:

Item	Function
Parent Account Code	Account Code with lower level "child" account codes below it.
Account Code	The alpha numeric sequence assigned as the code.
Description	Description detailing the account code's scope.
Currency	The currency assigned to the account code.
UoM Primary	The primary unit of measure for the account code.
UoM Secondary	The secondary unit of measure for the account code.
Auto Quantity Primary/Secondary	Automatically roll up cost item quantities if the cost items and this account code have the same primary/secondary UoMs. It can also be set on a project specific basis.
Parent Roll Up Behavior	Controls whether primary or secondary quantities of account code roll up to the parent account code's primary or secondary quantity.
Account Code Tag 1-20	Tags that can be associated to account codes to enable them to be categorized.
User Defined Field 1-10	Optional open-text fields you can use to add information related to the account code.

NOTE The asterisk (*) at the beginning of a tile indicates it is a required field and it must be populated before the code will be created.

- 7. Fill in the information below:
 - Account code: Your Initials (Since a parent was selected when creating this new account code, numbering prior to '-Your Initials' will be the parent's)
 - Description: Your Initials Account Code
 - Currency: US Dollar
 - UoM primary: Ton
 - Leave all other defaults/blanks

		Cancel
		Cancel

8. When you have filled out all the information, click **Stage** to send the new account code to staging area.

Cancel	Stage

- The new account code now exists in the Account Code Structure on the Staging tab
- The new account code will not be available for use within projects until it is published

- 9. If you have the permissions to publish account codes, check the box for the account code you created..
- 10. Click the **Publish** button in the top-right corner of the page.

You can also edit existing account codes within the Account Code Structure, as indicted in the steps below.

Edit Account Code Details

- 1. From the Account Code **Staging** tab, select the account code you created.
- 2. Click the Edit Account Code button.

			PUBLISHED	STAGING	
Ð					
	Account code 🚽	Description =	UoM primary 🚽	Currency 🚽	UoM secor
)	62.03.04.004	Module Assembly - Erect Steel	Ton	US Dollar	
)	62.03.04.004.02	Module Assembly - Erect Steel - Erect Steel - Light (0-19 lb/LF)	Ton	US Dollar	
)	62.03.04.004.04	Module Assembly - Erect Steel - Erect Steel - Medium (20-39 lb/LF)	Ton	US Dollar

10.3.2 Account code permissions

If you have the required permissions, you can delete, replace, or rename account codes.

NOTE The account administrator does not have permissions automatically assigned to approve account codes. Your account administrator must add the permission to approve account codes in the Master data libraries to the administrative account.

10.3.2.1 Deleting account codes

Follow the step-by-step to delete an account code.

NOTE If you are deleting a parent account code, all children under the parent are also deleted.

Deleting account codes

- 1. Go to the Master data libraries and then select **Account codes**.
- 2. From the Staging tab, select an account code you want to delete.
- 3. Select the **Edit** icon in the upper-left corner.

4. On the Edit account code page, enter a new name for your selected account code in the **Description** text box. Then enter a new name for your selected account code.

* Parent account code	* Acco	ount code	
None - None	🗹 No	001	
Start typing the code or description. i.e. footing			
* Description	* Curr	ency	
001	USE) - US Dollar	
* UoM primary	UoM s	secondary	
Acre			

- 5. Click the **Stage** button.
 - This takes you back to the Staging page.

- 6. From the Staging page, select **Approve all**, and then select **Approve**.
 - You can view your current items and renamed items in the Published tab.

NOTE

Your renamed account code is viewable through the Account code column, Cost Item Detail tab, and the ACS tab.

10.4 ACCOUNT CODE ASSIGNMENT

NOTE Account codes can only be assigned to terminal items. Parents cannot have an account code.

Assign Account Codes to Cost Items

- 1. From within the Control Workspaces page of a project, select the **CBS** tab to view your Cost Breakdown Structure.
- 2. From the View menu, select the **Project Controls** view by first selecting View more, if not already displayed.
- 3. Within the Task Details data block, click on the right arrow to progress to the Account Code column.
- 4. For a cost item you wish to have an Account Code assigned, double click in the Account Code cell for that cost item.
- 5. Use the search box to find the account code to assign, then click **Select**, and then click **Assign**.

10.5 AUDIT LOG

The **Audit Log** tab within the CBS register is used to capture changes that were made within InEight Control and is broken down into five sub-tabs located on a left sidebar menu. Each log is designed to capture the changes that happened within each of the different registers and during syncronization.

All five audit logs can be access by selecting Audit log tab menu bar, then selecting each individual audit log on the far left.

Actions 💌													
BS	Audit ID =	Data type	ltem type =	Desci	WBS	Attrit	Chan by =	Chan date =	Value befor =	Value	Actua comp =	Forec total =	Forec total co
CS	4871359	CBS	Cost Item	Concrete	1071	Schedule	Michael M	07/23/20	False	True			
ay items	4871358	CBS	Cost Item	Earthwork	1069	Schedule	Michael M	07/23/20	False	True			
itegration	4871357	CBS	Cost Item	Job Overh	1002	Schedule	Michael M	07/23/20	False	True			
nport history	4871356	CBS	Cost Item	Structural	1073	Scheduled	Michael M	07/23/20	False	True			

10.5.1 CBS

You can access the CBS audit log by selecting CBS from the left side menu.

The **CBS audit Log** captures changes in the CBS register and utilizes an attribute field to identify what type of change was made. Other columns include:

- Changed By (who made the change)
- Change Date (the date and time the change was made)
- The attribute value before and after
- Forecast cost before and after
- Forecast man-hours before and after
- Posting date before and after

CBS	ID =	Data type	ltem type	Desci	WBS	Attrit	Chan by =	Chan date	Value befor	Value after -
ACS	4871359	CBS	Cost Item	Concrete	1071	Schedule	Michael M	07/23/20	False	True
Pay items	4871358	CBS	Cost Item	Earthwork	1069	Schedule	Michael M	07/23/20	False	True
Integration	4871357	CBS	Cost Item	Job Overh	1002	Schedule	Michael M	07/23/20	False	True
Import history	4871356	CBS	Cost Item	Structural	1073	Scheduled	Michael M	07/23/20	False	True

10.5.2 ACS

You can access the ACS Audit Log by selecting **ACS** from the left side menu.

The **ACS Audit Log** functions similarly to the CBS Audit Log, but contains the changes that were made within the ACS (Account Code Structure) tab. The fields utilized to capture what changes were made are:

- Change attribute
- Changed By (who made the change)

- Changed Date (the date and time the change was made)
- Attribute value before and after

CBS	Audit ID 🚽	Data type	hen type 🚽	Description	AC No.	Attribute -	Changed by	Changed date	Value before	Value after
ACS	177	ACS	Account Code	Structural Steel Industrial	62.03.02.004.02	Primary Auto Quantity	Paul bennion	11/19/2018 12:28 PM	False	True

10.5.2.1 Pay Items

You can access the Pay Item Audit Log by selecting **Pay Items** from the left side menu.

CBS	Audit ID	Data type	Item type	Description	Pay item No.	Attribute	Changed by	Changed date =	Value before	Value after
ACS	4873330	Pay Item	Pay Item	Pay Item 1	001	Billing Method	Renee Japp	07/26/2019 01:	Cost Plus	Fixed Final Price
Pay items	4872029	Pay Item	Pay Item		1	Pay item tag 8	Renee Japp	07/24/2019 02:		PY 8
Integration	4872028	Pay Item	Pay Item		1	Pay item tag 6	Renee Japp	07/24/2019 02:		PY 6
Import history	4872027	Pay Item	Pay Item		1	Pay item tag 4	Renee Japp	07/24/2019 02:		PY 4

The **Pay Item Log** again functions similarly but contains changes that were made to the pay items. The fields utilized to capture what changes were made are:

- Attribute
- Changed By (who made the change)
- Changed Date (the date and time the change was made)
- Value before and Value after
- Total price before and after

Audit ID	Description	Attribute	Changed by	Changed date -	Value before	Value after	Total price before
1333638	Testing 07/31	Description	paul trippi	07/31/2019 08:	Test	Testing 07/31	\$1040.0000000
1333637	Testing 07/31	Sales Order	paul trippi	07/31/2019 08:		S1	\$40.00000000

10.5.3 Integration

You can access the Integration/Sync Audit Log by selecting Integration from the left side menu.

CBS	Audit ID	Interface	Status	Processing details	Start	Finish	User name	Log Handle
ACS	65639	ActualQty	Succeeded	<u>4 of 4</u>	07/29/2019 03:23 PM	07/29/2019 03:24 PM	pavithra baskaran1	4a2a98f6-eaa6-431b-81f
Pay items	65638	LiveForecast	Succeeded	<u>4 of 4</u>	07/29/2019 03:23 PM	07/29/2019 03:24 PM	pavithra baskaran1	ce90c8df-f916-4a50-847.
Integration	65637	Budget	Succeeded	<u>4 of 4</u>	07/29/2019 03:23 PM	07/29/2019 03:24 PM	pavithra baskaran1	43b8dc1c-6825-413a-9c.
Import history	65636	CBS	Succeeded	<u>4 of 4</u>	07/29/2019 03:23 PM	07/29/2019 03:24 PM	pavithra baskaran1	0985605a-745c-4f27-88

The **Sync Audit Log** is different from the other three. This log is used to capture:

- Whether the syncronization process between InEight Control and the ERP system was completed successfully
- How long the sync process took to complete and who requested the sync

It keeps track of the following functions, as seen under the Actions > Sync menu:

- Push CBS Structure
- Push CBS Structure and Budget
- Push CBS Structure and Live Forecast
- Push CBS Structure and Actual Qty
- Get Plan Quantities
- Get Actual Cost and MH

The syncing relationships and process will be discussed further in Lesson 12 - Interfaces.

NOTE The status field will automatically update and change from Queued to Succeeded. Queued status items can be cancelled if there is an error or if the sync is no longer necessary by clicking the Cancel a Queued Sync button in the top right-hand corner of the sync log.

🗄 🗄 🕴 🦉 🖯

To help troubleshoot sync issues, you can click on the Processing details link to get more information on which steps succeeded, are suspended, or failed.

8		Last updated: 08/29/2018 01:03 PM Use shortcut key F5 to refresh status
Completed details Plan quantities pull: 31570		
Step	Status	
Step 1: Recieving data	Complete	
Step 2: Populating data	Complete	
		_
		Close
© 2018 InEight Inc. Privacy and Terms v18.3		INEIGHT

If a sync error should occur, you can click on the Log Handle link to obtain troubleshooting information.

Log Handle	-
4a2a98f6-eaa6-431b-	<u>81f</u>
ce90c8df-f916-4a50-8	<u>347</u>

This brings you into the InEight **Suite App Logs screen**, where you can see information relating to the error including Level, Time, Domain, Area, Exception Message, Exception Type and Correlation Id, which can help you determine the cause of the sync error.

10.5.4 Import history

You can access the Import history audit log by selecting Importhistory from the left side menu.

The Import history log contains status information for all imports coming into InEight Product Portfolio. *For example*: cost item and actuals import processes can both be viewed in the Import history log for status, then you can eventually make corrections and reprocess.

CBS	File name	Status	Processi Details	Total line = items	Errors	Total imported =	Added estimate resource	Added pay items	Created by	date -	Last edited -	Last edited

Integration	Book1.xlsx	<u>▲ Pe</u> ▶⊘		2	2	0	0	0	Renee Japp	07/12/2019 0	paul trippi	07/30/2019 0
Import history	Market_St_9_8_17_GMP_Baseline.xer (Mark	🖉 Cancelled	Step 5	0	0	0	0	0	Renee Japp	07/10/2019 0	Renee Japp	07/23/2019 1

The Import history audit log allows you to take action on import and sync failures, based on error messages. Error messages are contained within the Error File Here for those imports that have failed import.

You can view progress in sync longs, view error messages, and then resolve issues in effort to continue with your import.

Control – Audit Log

	Section	Description
1	File name	The name of the actual import file being used to import data.
2	Status	The current status of the import file. There are six import status that can define the current state of an import process.
3	Processing Details	This column describes the processing state in which the file is being processed. This column is not applicable for all statuses.
4	Total line items	This is the total line items that are included within the Excel import file.
5	Errors	This is a count of the number of errors during import.
6	Total import	This is the total amount of records that were successfully imported from the Excel import file.
7	Added estimate resources	This is the total amount of added estimate resources that were added in the CBS.
8	Added pay items	This is the total amount of pay items successfully imported from the Excel import file.
9	Created by	This is user responsible for importing the Excel upload file.
10	Created date	This is the actual date the Excel upload file was imported.
11	Last edited by	This is the last user to edit the Excel upload file.
12	Last edited date	This is the last date the Excel upload file was edited.

File name	Status 📃	Processing Details	items	Errors	Total imported	Added estimate resources	Added pay items	Created by	date	Last edited by	edited date
NEWPROJ.xer (D	A Pend 🕨 🖉	Step 5	18	0	0	0	0		08/02/2019 12:1	paul trippi	08/02/2019 12:1

If you hover over one of these Status symbols below, it provides you with a brief explanation of the selected status.

Here are some examples:

842 items imported successfully

a Database update failed	Seriled C
Import Cancelled 0 of 0 items contains errors User cancelled the import	Cancelled
Import complete	Complete

▲ Pending	▲ <u>Pend</u> ▶⊘
0 of 111 line items contain errors	▲ <u>Pend</u> ▶⊘
Continue Import	
O Cancel	< Complete

There are six possible import statuses listed below.

6

Status	Status Icon	Definition
Failed	S Failed	Import failed due to a duplicate row within the Excel file.

Status	Status Icon	Definition
Failed with errors	S Failed wi⊥ ↓	Import failed with an attachment to download with further information.
Pending	A Pend 🎔 🖉	The Excel import file is pending, further action is needed. The double blue arrows will open a new window where you can correct and reprocess the Excel import file. The blue circle with the line through it will cancel the import completely.
Cancelled	Cancelled	The Excel import file has been cancelled.
Processing	Processing	The Excel import is still processing. Once this is complete, the status will move into one of the other five statuses.
Complete	Complete	Processing of the Excel import files is complete.

10.5.5 Pending status

When an import is in a **Pending** status, this means that further action is needed to complete the Excel file import.

A Pending 🕨 🖉

There are two options:

Option 1

1. By selecting the double blue errors, you will be taken to another window to continue processing the faulty records.

Status
▲ <u>Pending</u>

As an example, in the below screenshot, there are 3 existing errors. If you hover over one of the errors, it will tell you what needs to be corrected.

In this case, there is an issue with the account code assignment, as the pop-up hover suggests.

Audit log > Import history	> CBS Import.csv						
	Find	previous error 3 err	rors remaini Find r	next error			Cancel Import
Status Details (& WBSph	ase code)	Import Columns	A				
Import status	CBS match status	Import method	CBS position	Description	WBS phase code	Account code	
Pending	✓ to 1002 [1] [Job Overhead]	Update existing items o	1	Job Overhead	1002	20	
Pending	✓ to 1069 [2] [Earthwork]	Update existing items o	2	Earthwork	1069	51	
Pending	✓ to 1071 [3] [Concrete]	Update existing items o	3	Concrete	1071	61	
Pending	✓ to 1073 [4] [Structural Steel]	Update existing items o	4	Structural Steel	1073		
Pending	✔ to 1074 [4.1] [Erect Steel - H	Update existing items o	4.1	Erect Steel - Heavy	1074	62.03.02.004.06

Error	✓ to 1087 [4.4] [Module 01 - Er	Update existing items o	4.4	Module 01 - Erect Steel	1087	1112236	8

2. When you double click into one of the 3 errors, it will take you directly into an account code assignment screen where you can make the correction.

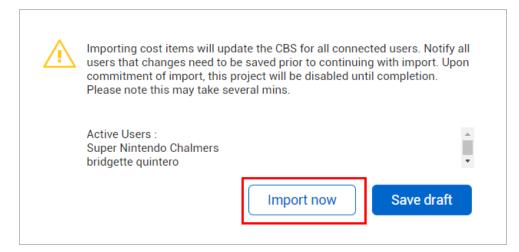

From here you can select an account code and click on Assign.

earch			
Select	Account code	Description	UoM
۲	00	Overhead.6233 EDIT	PLS
۲	00.03	OH - Get Work	MWk
۲	00.03.02	OH - Estimating	MWk

۲	00.03.02.014	OH - Estimating - Post Bid	MWk
	00.03.02.016	OH - Estimating - Management	MWk
	00.03.02.018	OH - Estimating - 2nd Estimates	MWk

3. After all corrections have been made to the existing errors, you can select the Import button on the top right on the screen.

Find r	next error			Cancel	Import
-	Description	WBS phase code	Account code		
	Job Overhead	1002	20		-
	Earthwork	1069	51		
	Concrete	1071	61		
	Structural Steel	1073			

4. A warning message appears stating that changes will be made, and this project will be disabled until completion.

5. Once processing has finished, you will receive an Import complete message.

6. The Import history page now shows that the imported file is now successfully imported and updates the Last edited date.

File name	Status	Total line items	Errors	Total imported -	Added estimate resources	Added pay	Created by	Created date	Last edited	Last edited	
CBS Import.csv	📀 Complete	11	0	0	0	0	Keith Anderson	06/19/2019 06:30	paul trippi	07/31/2019 10:32	

Option 2

1. Selecting cancel, the blue circle with the line through it, will cancel the import completely.

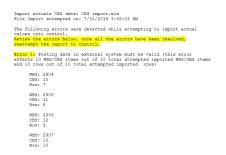

File name	Status	
CBS Import.csv	A Pending	₩⊘

10.5.6 Failed with errors status

When an import is in a **Failed with errors** status, the system will generate a Word error report. The document displays detected errors while attempting to import the Excel file values. Errors will need to be reviewed within the Word document

An example of the Failed with errors Word **error file** provides direction on how to proceed with correcting the Excel import errors, and a course of action to run the import again

The only option with a Failed with errors status is to review the errors, resolve them within the initial Excel file import, and then re-import the file.

10.6 QUANTITY CONTRIBUTION

At the project level, you can manage account codes under the ACS tab from the Control Workspaces page. On the ACS tab, you can see the account codes assigned to your cost items, along with the related parent account codes, with account code details and quantity contributors.

Other budget information is automatically pulled into the ACS Details data block including, Total Cost, Unit Cost, Unit Rates, Primary and Secondary Quantity Ratios, Quantities Complete, and Account Code Tags. To access this information, click the right arrow to view the second, third and fourth panels of the data block.

ions 👻								D 🖬 🖸

10.6.1 ACS Navigation

The ACS tree lets you easily navigate up and down your ACS structure and also provides a way to filter down to a subset in the structure. Open the ACS tree slide-out panel by clicking on the ACS tree icon on the side toolbar.

Actions 👻				5	mt 🖸 (∃ ≎≡ C
ACS tree	×	ACS			:	ACS detai
🛛 Expand all 🛛 😞 Collapse all		⊗ Account code	Ŧ	Description	Ŧ	Primary Qty

10.6.2 Account Code Quantity

There are two methods for defining primary and secondary quantities for your account codes:

- Manual entry in the Primary Qty and Secondary Qty fields
- Using the auto-quantity feature to have them automatically inherit the quantities of any cost items that have the same unit of measure as the assigned account code

Define Account Code Quantity

- 1. From the Workspaces page of the Steel Structure Job, select the **CE + CB** viewset from the View drop-down list.
- 2. In the Current Estimate data block, double click in the **Secondary UoM** field for a cost item you assigned an account code to.
- 3. Select a Secondary UoM from the drop-down list different than the cost item's primary UoM.
- 4. Click the **side arrow** to navigate to the Secondary Qty column.
- 5. Double click in the **Secondary Qty** field for your cost item and enter a value.
- 6. Select the **ACS** tab.
- 7. In the Primary Qty field for the account code assigned to the cost item you just changed and type in a quantity value.
- 8. For your account code, check the **Auto-quantity (Primary)** check box.
- 9. To view what cost items are assigned to the account code, right click on your account code and select **ACS item details**.

If you have the account code slideout open and want to open a different account code's item details, you can select a different account code. The details slideout updates to the current account code's details. You no longer have to exit out of one ACS item only to right click and select ACS details slide out to open another.

10.6.3 Quantity Contributors

Within your project, you can specify how primary and secondary quantities contribute to your account codes. Specifically, you can indicate how:

- Cost item primary and secondary quantities contribute to assigned account code primary and secondary quantities
- Child account code primary and secondary quantities contribute to parent account code primary and secondary quantities

For both cost item and account code contributions you can have quantities roll up:

- Primary quantity to primary quantity
- Primary quantity to secondary quantity
- Secondary quantity to secondary quantity

NOTE Account codes will only automatically inherit quantities from cost items/account codes using the same unit of measure.

10.6.3.1 Contribution Options – Cost Item to Account Code

From the ACS item details slide out panel, you can specify how cost item quantities roll up to the account code that is assigned to it, by selecting the appropriate checkbox. The total of the contributing cost item(s)'s quantities will roll up to become the account code quantity.

ACS item d	etails					Structural Steel I	ndustrial - Erect	Steel - Light (0-1	9 lb/LF)
CBS position = code	Description	WBS phase	UoM	Foreca st =	CE final = MHrs	CE total =	Primar y to = Prim	Primar y to	Secon dary to Seco
4.2	Erect Steel - Light	1005	Ton	200.00	4000	200,000.00	v		

10.6.3.2 Contribution Options – Child Account Code to Parent Account Code

On the ACS page, in the ACS qty contributors data block, you can specify how child account code quantities will roll up to their parent account codes by selecting the appropriate checkbox.

NCS	:	ACS details	< ••• >	:	ACS qty contrib	utors	
ccount code	Description	Primary Qty =	Primary UoM =	Auto- quantity (Primary)	Contribute Primary to Primary Qty	Contribute Primary to Secondary	Contribute Secondary to secondary Qty
20	Job Related Overhead	0.00000000	MWk				
51	Grading	1.00000000	PLS				
61	Concrete	10000.00000	CY				
62	Metals	0.00000000	Ton				
	Structural Steel and Connectio	0.00000000	Ton				
	Structural Steel Industrial Stru	0.00000000	Ton				
^ 62.03.02.004	Structural Steel Industrial - Ere	1000.000000	Ton				
62.03.02	Structural Steel Industrial - Ere	200.0000000	Ton				
62.03.02	Structural Steel Industrial - Ere	800.0000000	Ton				

10.6.4 ACS Unit of Measure Toggle

In the ACS register, you can toggle different Unit of Measures. The Unit of Measure toggle has three different options:

- As entered Unit of Measure
- English (Imperial Unit of Measure)
- Metric

V	iew :	Project Co	ontrols		•
С	ΠŤ	3		1Ξ	Q
System	of meas	ure		:	ACS
T	entered u glish	unit of me	asure	•	Contribe Primary Primary
Me	tric				
					- 1

If you want to display and edit in liters instead of gallons for example, you would select the ruler icon in the top right corner of the ACS register, and then select Metric. The quantity amount converts in the browser and displays in the alternate unit of measure.

10.6.5 Account Code Quantity Conversions

Cost items that are tracked in one unit of measure can be tracked in another UoM. For example, cost items that are tracked in a metric UoM can contribute to account codes tracked in imperial UoM. This saves time in maintaining account code quantities, as project team members do not have to perform

quantity conversions manually. Data accuracy is also ensured since any manual errors are eliminated from the conversion process.

In this example, CBS item Asphalt Paving and Break Removal contains a Forecast quantity of 3,000 with a UoM of Square Meter.

ask	s	:	Task details	< •••• >	
	℅CBS position	Description -	Resource	Forecast (T/O)	UoM
	▲ 1.1.1.2	Removals and De		1.00	PLS
	1.1.1.2.1	Excavate Native t	3	42,000.00	m3
	1.1.1.2.2	Asphalt Paving Br	3	3,000.00	Square Meter
	▲ 1.1.1.2.3	Concrete Removal		1.00	PLS

In the ACS, you can display the Primary UoM Alternate System column to see what UoM is needed to track cost items in, so they contribute to your account codes. The Auto-quantity column is set up so that quantities are summing up the CBS. The Primary Qty of 3,587.97 is automatically populated. There is no further action to allow this value to roll up to the account code.

ACS	•	ACS details	< ••	• >	
Secount code	Description	Primary Qty	Primary UoM	Auto-quantity (Primary)	Primary UoM alternate system of
▲ 50.03.02.002	Paving Removal	3,587.97	Square Yard	V	Square Meter
50.03.02.002.02	Break - Asphalt P	3,224.10	Square Meter		Square Meter
50.03.02.004	Paving Removal	0.00	Square Meter		Square Meter
▲ 50.03.12	Concrete Removal	0.00	Cubic Meter		Cubic Meter
▲ 50.03.12.002	Concrete Removal	0.00	Cubic Meter		Cubic Meter
50.03.12.002.05	Concrete Removal	290.82	Cubic Meter	~	Cubic Meter

The system will automatically take the Forecast Qty in the CBS, and convert that number to the value shown in the Primary Qty field displayed in the ACS. In the above example, the CBS Forecast Qty of 3,000 in square meters is being converted to the 3,587.97 square yards, as shown in the ACS.

3000	=	3587.97	
Square meter	\$	Square yard	÷

10.6.6 Notes Column

A Notes column is available for you to add to a new or existing data block. The Notes column lets you add commentary to any of the ACS records.

tions 👻										5		Unsaved ((
tions 👻										ອ	Шĭ	ţ,	3	‡≡	
ACS	1	ACS details		< ••• >	_		i A	CS qty contri	butors	Р	roject ac	count co	de notes	3	
⊗ Account code	Description	Primary Qty	Primary UoM	Auto-quantity (Primary)	Ŧ	Notes	- Pri	imary to	Contribute Primary to Secondary						
∧ ⁹⁹	Change Orders, Contract Allowan	1.0000000000	PLS			喝	-								
∧ 99.09	Back charges	0.0000000000	PLS			喝		<u> </u>							
▲ 99.09.02	Back charges - Incoming	1.0000000000	PLS			喝									
99.09.02.002	Back charges - Incoming - Labor	1.0000000000	PLS			Щ.									
▲ 99.09.04	Back charges - Outgoing Internal	0.0000000000	PLS			喝					On hold u	intil spec d	ocs are r	eceived.	
99.09.04.002	Back charges - Outgoing Internal	1.0000000000	PLS			喝									
▲ 99.09.06	Back charges - Outgoing External	0.0000000000	PLS			喝								_	
99.09.06.002	Back charges - Outgoing Externa	1.00000000000	PLS			喝								1	Ac

After notes are added to a record, the Notes column populates with the number of comments that are currently added to each record.

10.7 MEASUREMENT TYPES

In master data libraries units of measure, there are two sections. The sections are Units of measure, and Measurement types. Using any two Units of measure that share the same Measurement type (such as area), you are able to do a measurement type conversion in the ACS.

If you have a cost item with a different unit of measure assigned to an account code, but with the same measurement type, that cost item can contribute to the same account code.

Master data libraries		 Units of met 	asure 🗸	
Units of measure	(+			
		Name T	Description	Measurement type
Measurement types	0	#NAME?- Copy AE ae	BACKLOGS	Area
	0	#NAME?- Copy B	DESC	Area
	0	#NAME?d	DESC	Area
	0	-0098765- Copy- Copy1- Copy		Area
	0	-0098765- Copy- Copy1- Copy	-0098765- Copy- Copy1- Copy	Area

You can have a cost item with a measurement type of acre contribute its values to its assigned account code if the account code has a measurement type of square foot. This is Because acre and square foot are both a measurement type of Area.

The column Primary to Primary lets you choose the cost item that contributes quantities of the account code.

rimary Qty	Primary UoM				DETAILS		COST CATEG	ORIES		_
2,460.1999	SF	ACS item	details						Primary to Prima	ry
		CBS positi code	Desc	WBS phase code	Forec (T/O) quan	UoM	CE final MHrs	CE total cost	Prim	Prim to Seco
		1.1.1.1	Permits	1004_	450.00000	Acre	2,323.00000	99.9999950		
		1.9.2.1	SOE for fou	1252	320.00000	SF	64.00000	0.0000000	✓	
		1.9.2.2	Excavate fo	1253	95.00000	CY	57.00000	0.0000000		
		1.9.2.3	U&H Steel	1254	2.64600	Ton	5.29200	0.0000000		Z
		1.9.2.4	Set Steel Fr	1255	35.00000	Each	140.00000	0.0000000		
		1.9.2.5	Bolt Up	1256	172.00000	Each	22.36000	0.0000000		
		1.9.2.6	Metal Grati	1257	180.00000	SF	28.00000	4,032.9767		

The items without a check mark, such as Cubic Yards, have a measurement type that is not considered an area, so you cannot select Primary to Primary for Cubic Yards, Ton, and Each.

10.8 COST CATEGORY LABEL CUSTOMIZATIONS

In Master data libraries > Cost categories, there is a **Enable custom labels** toggle. If this toggle is turned on, all of your cost category field names come from the custom columns depending on your language preference in Control. Language preference is located in user settings.

			Enab	ble custom labels	s 🥝	Q
Custom label - EN	Custom label - ES-MX	Custom labe	el - FR-CA		Custom label	PT-BR

You can overwrite the custom labels if you have the applicable permissions. Depending on where you have cost categories shown in the product, the overwritten labels show with the new custom labels.

NOTE These labels can be viewed at the organization level. Every project within that organization can see these labels.

If the organization prefers a different field name, it can be renamed using the cost category custom labels.

NOTE Dimmed custom labels cannot be overwritten. For example, the Field name Total.

Field name	Is terminal	Ξ	Custom label - EN	
Total			Total	
Labor (i)			TEST-12345-94	
Labor Base			L-Base	

If the custom label for the field name is blank, then the custom label column will use the default name for the field name column.

One way of finding these custom labels in the project is by going to the CBS register. From there, open the Cost Categories slide-out panel. Under the Cost category column, find your custom label. For example, the Labor Base field name can be customized and renamed L-Base.

	PAY ITEMS	5 0	HANGE REGISTER	AUDIT LOG	
					C 🗉
1004_					
Permits					
		DETAILS	ATTRIBUT	ES C	OST CATEGORIES
75.55556 %	Manual	(EAC) 💌	values © 12/11/2020	Total Per unit	
75.55556 % Cost catego		(EAC) Current budget		Total Per unit Current estimate	Live forecast
			© 12/11/2020 Total cost (to date)		Live forecast \$ 49,999.9999990
Cost catego	rу	Current budget	© 12/11/2020 Total cost (to date) \$ 30,559.6000000	Current estimate	

NOTE

These changes can take a few minutes to fully generate because custom categories span the entire project.

If the Enable custom labels toggle has been shut off, then the category names come from the Field names in the Master data libraries only.

Review

- 1. Account codes are created inside which of the following:
 - a. ACS register page
 - b. Library
 - C. Project settings
- 2. Which of the following are account codes used to track?
 - a. Quantity
 - b. Budget
 - C. Account Code Tags
 - d. Unit Costs
 - e. a, b, and d
 - f. All of the above
- 3. Which of the following is not tracked in the CBS Audit Log?
 - a. Change Attribute
 - b. Changed By
 - c. Change Date
 - d. Pay Item Value
 - e. Forecast Cost Before and After

Summary

As a result of this lesson, you can:

- Define what an account code is
- Set up account codes within the library
- Assign account codes to cost items
- Define the quantity contribution for each account code
- Review and analyze the audit log

INEIGHT CONTROL INTERFACES

Lesson Duration: 30 minutes

Lesson Objectives

After completing this lesson, you will be able to:

- Explain the InEight cloud platform Functional Flow diagram
- Explain the different InEight Control Push interfaces and use cases
- Explain the different InEight Control Get interfaces and use cases
- Identify where to go to audit sync transactions

Lesson Topics

11.1 Interfaces Overview	
11.2 Push and Get Actions	
11.3 Audit Log Integration	
11.4 Scheduled Syncs	
Review	
Summary	

11.1 INTERFACES OVERVIEW

The InEight cloud platform has several options for synchronizing information from one platform to another. This gives you multiple options to utilize data efficiently between various programs, saving you time and resources.

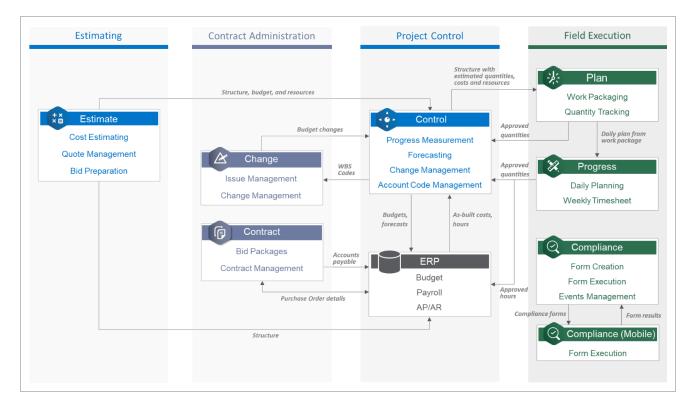

The table below shows you the high-level functions of multiple platforms to help you better understand how these tools interrelate.

Title	Description
Estimate	Create CBS / ACS / WBS structures Create cost estimates Analyze contractor/supplier quotes Prepare bid proposals Benchmark estimate values
Contract	Create and manage bid packages Set up and manage contracts Create and manage issues and change orders
Control	Edit CBS / ACS / WBS structures Manage budgets and contracts Manage forecasts Record actuals (manual entry, or import from Plan and ERP) Calculate job costs / variances, earned values, contract earnings
Plan	Associate planning components with CBS / ACS / WBS structures Create work plans and packages
Progress	Create work plans and daily plans Record progress and timesheets (as-builts) Approve executed daily plans
ERP	Budget, Payroll, Forecasts, AP/AR, Final Costs

Overview – Interfaces

For this lesson, you will focus on the programs that integrate directly with Control (after the initial import from Estimate) and will go over how to perform the basic "Push" and "Get" actions to move data between systems.

The workflow diagram below shows the connections between the programs, and details on what data passes between the various InEight products:

11.2 PUSH AND GET ACTIONS

Control Integrations typically have one direction that specific information travels. As data is generated or modified in one product, it does not automatically change in other connected products downstream; you must perform a sync action, referred to as "Push" or "Get".

- A Push sync occurs when you are in a program and you would like to send information to a different program
- A Get sync occurs when you are in a program and you would like to retrieve information from a different program

You can view the various integration options by clicking on the Actions menu from the Control main page and hovering over the Sync option. The image and table below give a description of the sync type functions:

Overview – Sync Options

	Sync Type	Function
1	Push CBS Structure	Syncs the Control CBS Structure to the ERP system.
2	Push CBS Structure and Budget	Syncs the Control CBS Structure, budgeted quantities, man- hours, and costs to the ERP system.
3	Push CBS Structure and Live Forecast	Syncs the Control CBS Structure and Live Forecasted quantities, man-hours, and costs to the ERP system.
4	Push CBS Structure and Actual Quantities	Syncs the Control CBS Structure and job-to-date actual quantities to the ERP system.
5	Push CBS Structure, Budget, Live Forecast, and Actual QTY	Simultaneously performs all the syncing functions listed above (1-4).
6	Push Pay Item	Syncs the Pay item list and data to the ERP system.
7	Push Billed Revenue	Syncs job to date billed amounts to the ERP system.
8	Push Forecast Revenue	Sync pay item revenue values (billed revenue, earned revenue, forecast revenue).
9	Get Quantities (Through Previous Pay Period or Job To Date	Retrieves the claimed quantities from InEight Plan and incorporates the information to Actual QTY within Control.
10	Get Actual Cost and MH	Retrieves actual project costs and man-hours from the ERP system and incorporates the information to Actual Costs and Actual Man-hours within Control.
11	Get Billed Revenue	Retrieves billed amounts from the ERP system and incorporates the information to Billed revenue within Control

	Deale	I DOD Ding 10027		0.00	\$ 0.00	

11.3 AUDIT LOG INTEGRATION

As you utilize the sync option, you have the option to go back and audit the status of the actions taken. The Audit Log Integration displays any synchronization process that has been initiated and its status. It is used to capture whether the synchronization process between InEight Control and the ERP system was completed successfully. The log can also tell you how long the sync process took to complete and who requested the sync.

Sync Audit Log

1. From the Control Workspaces page, click on the **Audit Log** tab.

Steel Structure Trai	ning Job (105091) 🛛 👻	Control 👻 Workspaces							?	Ļ 0	8
	< ACS	PAY ITEMS	CHANGE REGISTER	AUDIT LOG	>	V	iew :	Forecasts	;		•

2. On the left side bar menu, click on Integration.

Steel Structure Job (105091)							
Actions 👻							
	CBS aud	lit log					
CBS	Audit ID -	Data type	ltem type				
ACS	264307	CBS	Cost Item				
Pay items	264306	CBS	Cost Item				
Integration	264305	CBS	Cost item				
Import history	264304	CBS	Cost Item				

• The log displays the current sync status

11.4 SCHEDULED SYNCS

Scheduled syncs let you set a time and date for the type of information you want updated from either push or get data.

You can set up recurring syncs or a one-time sync to get up-to-date costs on man-hours. Scheduled syncs occur at the point and time you scheduled them for.

To start scheduling syncs, the tab Sync integrations has been added to the Control Project settings.

If no syncs are scheduled, you can add a sync by selecting the **Add sync schedule** button.

General	PROJECT TRACKING	ESTIMATE RESOURCES	SCHEDULE	SYNC INTEGRATIONS
(1) Capital				ß
Control	Sync Integrations	cobodulo		
Plan		scriedule		
Progress	Add sync schedule			

There are five required fields you must fill out in order to schedule a sync.

- Sync type
- Time zone
- Start date
- Time to run sync
- Repeat

Sync types lists all available push and get syncs.

Sync type	* Time zone
Select one	(UTC-06:00) Central Time (US & Canada)
Select one	
Push CBS structure	* Time to run sync
Push CBS structure and Budget	12:00 AM
Push CBS structure and Live forecast	
Push CBS structure and Actual quantities	
Push CBS structure, Budget, Live forecast and Actual quantities	
Push Pay item	
Push Billed revenue	
Push Forecast revenue	
Get Plan quantities	Through previous pay period Cancel
Get Actual cost and MHrs	Job to date
Get Billed revenue	JOD to date

The Time zone is where you select which region's time zone you are in.

Start date functions similarly to selecting a start date for a project. You cannot select to start a sync from a day in the past. The scheduled sync starts at the current day by default unless you select otherwise.

-		
· ·	(UTC-06:00) Central Time (US & Can	ada) 👻
	* Time to run sync	
	12:00 AM	9
kly Monthly		
		12:00 AM

NOTE You can only select start times in 30 minute increments.

The Repeat section is where you select how often a scheduled sync repeats. You can choose to have the sync repeat daily, weekly, monthly, or never depending on your preference. You can end the schedule syncs on a certain date or end after a number of occurrences.

For daily syncs, select how often you want to repeat the sync or when you want the reoccurring syncs to end.

* R	epeat				* End	ł			
	Never	Daily In	Weekly	Monthly		After	1	¢	Occurrence(s)
					0	On			ti
									Cancel Add

For weekly syncs, select which days the sync repeats on as well as when you want the sync to end.

* Repeat				* End		
Never	Daily	Weekly	Monthly	After	1 🗘	Occurrence(s)
		0		() On		Ċ.
* Repeat on All] T [] F [] s			

For monthly syncs, select what day in the month the sync repeats and when you want the sync to end.

Never	Daily	Weekly	Monthly	0	Day	1. 🗘				
				۲	First	- Im	Sunday	•		
nd					First	0				
After 1	Occurrence	e(s)			Second					
On 02/03	/2021 📑				Third					
					Fourth					
					Last				ncel	Add

After you click **Add**, the sync appears in the synch integrations tab.

ync Integrations schedule		
Add sync schedule		
cheduled syncs		
Push Billed revenue		
Sync type: Push Billed revenue	Start date: 02/01/2021	
Time to run sync: 12:00 PM CST	Repeat on: Fri	
Repeat: Weekly	End: 12/31/2021	
Get Plan quantities		
Sync type: Get Plan quantities - Job to date	Start date: 02/08/2021	
Time to run sync: 1:00 PM CST	Repeat on: Last - Saturday	
Repeat: Monthly	End: 12/31/2021	

You can edit syncs or delete them using the edit and delete buttons on the far right of the sync data box.

NOTE You can schedule all your syncs for the project at one time. If you already have syncs configured for currently existing projects, you don't need to reconfigure your setup for this feature.

For any new projects that do notyet have scheduled syncs set up, you need to go to the **Application integrations** section of Control. Follow the Step by Step to navigate to the Application integrations page.

Navigating to Application Integration

- 1. From the header bar, select the projects drop-down.
- 2. Hover over **Suite administration**. That is where you would set up all of your sync configurations.
- 3. Select Application integrations.

Review

- 1. How can you know a sync process initiated?
 - a. Viewing the CBS Audit log
 - b. Appearance of a toast message
 - C. There is no way to tell
- 2. Where can you view the status of a sync process?
 - a. In the Change Register
 - b. On the CBS tab, in the Forecast data block
 - c. On the Pay Items tab, under the sync status column
 - d. In the Sync Audit Log

Summary

As a result of this lesson, you can:

- Explain the InEight cloud platform Functional Flow diagram
- Explain the different InEight Control Push interfaces and use cases
- Explain the different InEight Control Get interfaces and use cases
- Identify where to go to audit sync transactions

CONTROL SETTINGS

Lesson Duration: 20 minutes

Lesson Objectives

After completing this lesson, you will be able to:

- Create and manage InEight Control roles and permissions
- Navigate and define the different types of InEight Control project settings

Lesson Topics

12.1 Roles & Permissions	
12.1.1 User Management	
12.1.2 Organizational Breakdown Structure	
12.1.3 Roles and Permissions	
12.2 Project Settings

12.2.17 Others (project level)	552
12.2.18 Others (org level)	553
Review	556
Summary	556

12.1 ROLES & PERMISSIONS

Every new project launch has its own particularities, and the setup and initialization of these projects depends on multiple factors, such as:

- Project organizational structure
- Staff and resources assigned
- Location of the project
- Units of measurement
- Currencies
- Financial reporting period

This lesson covers how to set up these project options.

NOTE

Establishing roles and permissions is an administrative function. As such, access to these settings may not be available to you, as the setup of these settings may not be within the scope of your daily tasks.

12.1.1 User Management

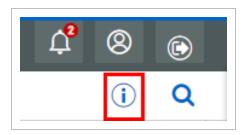

The User Management page provides a list of users inside your organization. You can view any user's project access, roles, and permissions within your organization. Users with required administrative permissions can edit and grant permissions to other users, up to the equivalent level of access they have been granted.

View the Role and Permissions of a User

1. From any InEight application, click on the **First Level Menu** in the upper left corner of your screen, and from the drop-down menu, select **Suite Administration**, then **User Management**.

8	105091 (Steel Training Job)	•	Project home 👻

- 2. Scroll down the list or use the Search field to find and select **a user**.
- 3. To view the record, **right click** on the name, and select **Show Info**.
 - You can also click on the Show Info button located on the upper-right register menu bar

TIP You can use the Search located in the upper right corner of the page to search for a keyword in any column in the User Management database.

	(i) Q
Search	× م

• Once you click on the **Show Info** option, a slide out panel appears on the right. From this panel, you can view the contact information, as well as the role and project access of that specific user.

	(i) Q
Paul Smith	×
Email address Employee ID	paul.smith@example
Status	Active
Start date	12/31/2016
End date	12/31/9999

NOTE

Note that once your organization implements the InEight cloud platform, you will be able to link your contacts' address book to your user information.

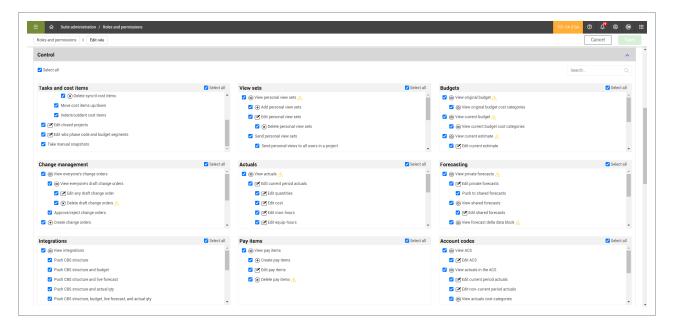

12.1.2 Organizational Breakdown Structure

The Organizational Breakdown Structure represents the way your company is structured and divided, such as departments, districts, sectors, etc. Roles and permissions can be added at different levels in your OBS, so users with a district level access would have access to all the projects under that district's umbrella.

12.1.3 Roles and Permissions

A role is defined as the function that a user occupies inside an organization or project. A role in Platform contains a set of predetermined authorizations and permissions. When a role is assigned to a

user, they acquire all the permissions of that role in the project or organization that you can assign to users or project staff. With sufficient rights and permissions, you can add or remove a role and all access it provides from the user. The Roles and Permissions section is where you can view what permissions each different role has. Refer to Platform topic for information about adding, deleting, modifying, and assigning roles.

NOTE

The administrator levels range from 0-3 and give you a predetermined set of permissions, with the lowest level giving read only access, and higher levels having more abilities to adjust settings and edit fields within the InEight portfolio of products.

InEight Control has many permissions that control important functions within the program.

12.2 PROJECT SETTINGS

To manage a project successfully in Control, the correct project details must be added before project initiation. To view project details, go back to the **All projects & organizations** page of the InEight cloud platform.

12.2.1 Organizations Page

The Organizational Breakdown Structure (OBS) represents the hierarchical company structure. It can have regions, such as Eastern and Western, and within those regions, the company can have also divisions, such as Electrical, Paving, and Masonry. The organization can continue to be more refined to

the level such as states, cities, districts. Projects are the lowest level of the structure but they do not show in the OBS.

The OBS controls your access. Where you are assigned in the organization determines what access you inherit and the visibility you have to other areas of the OBS. The higher the level a user is placed on the OBS, the more actions they can perform, and the more organizations and projects they can view. A user assigned at only the project level has no visibility to any other projects or administrative pages.

To access the OBS, go to All projects & organizations > **Organization**.

12.2.1.1 Unique budget code segments

You can populate budget segments in Workspaces to show a unique code label. Unique budget code segments contain additional options to identify a cost item using four independent fields that are separated by periods. Budget codes can be configured at the organization level and are primarily used with Time Center.

udget code Ing unique budget code? Jnique budget code	The segments are combinuinique budget code separacannot be changed once a	ated by periods. They

When the Edit WBS phase codes and budget segments permission is assigned to a role through Suite Administration > Roles and Permissions > **Control**, users are allowed to populate the WBS phase codes and budget segments in the CBS workspace. This permission only applies based on configurations set for the WBS phase code and the budget segments. This permission must be selected to allow users to edit WBS phase codes and budget segments.

The settings that pertain to Control are located under two of the tabs, as listed below:

- General
 - Home Page
 - Global Options
 - Fiscal Calendar
 - Document Types
 - Custom Lists
 - Attribute Definitions
 - Menu Options
- Control
 - Project Tracking (Organization, Project)
 - Forecast (Organization, Project)
 - Estimate Resources (Organization, Project)
 - Schedule (Organization, Project)
 - Revenue (*Project*)
 - Sync Integrations (Project)
 - Others (Organization, Project)

12.2.4 Home Page

The Home Page tab lets you create URL links to be placed directly on the Project home page at both the Organization and Project levels.

12.2.5 Global Options

The Global Options tab controls the master data libraries, cost item integration behavior, advanced work and scheduling features, and the template library. The three cost item integration behaviors provide flexibility in how to configure Control with and without a direct tie to an ERP system. There is also an option to pass cost items directly from other sources to applications.

Master data libraries

 \odot

Validate equipment to project currency. Toggling this to 'Off' will turn off equipment validation.

Cost item integration behavior

Control with confirmation

Control with confirmation: Use this option if you use Control and an ERP. To sync cost items between Control and other applications, you must confirm using the sync options in the Actions menu in Control.

Control without confirmation

Control without confirmation: Use this option if you use Control but not an ERP. Cost items sync automatically between Control and other applications.

Without control without confirmation

Without control without confirmation: Use this option if you do not use Control. Cost items pass directly from other sources to applications.

Advanced work and scheduling features

(-)

Enables data sharing between Model, Schedule, and Plan applications for use with advanced work and scheduling features

Template library

Enables project to be listed as an available template library project

12.2.6 Fiscal calendar

The settings in the Fiscal Calendar can be set at the organization and project levels. These settings specify the start and end dates for fiscal years and financial periods, such as month-end dates. It is important to know the different cut-off dates, especially when you pull the current period actual quantities to compare them to prior periods, or when you synchronize your quantities with the other applications.

Changes to a project level fiscal calendar only impact the project, while changes to the organization level fiscal calendar impact all projects that do not have fiscal calendar modifications. If there are no

changes at the project level, and the project matches the organization fiscal calendar settings, the project inherits the organization-level settings.

Any changes to the project fiscal calendar impact read-only snapshots, which are captured at the closure of month-end plus days, for the period month being closed. Changes also influence the monthly time buckets in time phase forecasting and budgeting and to the time periods in which claims can or cannot be posted.

* Week ending day		* Financial year start month	
Saturday	•	April	•
Period end			
* Month end day		Last weekday	
Last day of the month	•		T
* Financial period closing day		* Month end plus days	
* Financial period closing day Same as Month End Plus Days	Ŧ	* Month end plus days	17
	•		17
	•	* Month end plus days * Closing time zone	17

12.2.7 Document Types

You can assign a document type to InEight applications. This lets you filter the payload of Document Types for visibility and use in the assigned application.

	Englis	h				Español		ES-MX
		Name	Description	Product(s)	System managed	Name	Description

12.2.8 Custom Lists

Like the tag feature in InEight Estimate, you can enter your tags and their values to use later for categorizing your cost items as you manage your project in Control.

Many of the tag fields are validated fields, meaning you can choose from options in a drop-down list. You define both the names of the tags and their drop-down values here.

The field names associated with Cost breakdown structure and Account codes, are tags defined and editable at the organizational level; you cannot edit them at the project level, as indicated by the statement "Inherited from parent organization".

<	GLOBAL OP	TIONS	HOME PAGE	PROJECT INFORM/	ATION FISCAL CALENDAR FUEL TYPES	CUSTOM LISTS

12.2.8.2 CBS URL columns

You can create direct links to URL addresses outside of Project Suite under Custom Lists. In the URL Field values you can define a URL with associated criteria to be used as an attribute for a cost item in the CBS.

In the URL Builder enter a URL that you want associated with your list name, along with any other dynamic attributes such as Project ID and CBS position code. Paste your URL and highlight the section you want to reference with another field. First highlight an attribute in the URL string, and then click the **[T]** reference icon to select which field to connect with.

	ଜ	Steel Structure Training	Job 105091 / Settings					¢ 🛛 🕲	
>			GLOBAL OPT	ONS HOME PAGE	FISCAL FUEL TYPES CALENDAR	CUSTOM LISTS	MENU OPTIONS		
)	_	List name	Label name	Associated entity 1	Field values	Inherited from parent org	URL builder		>
Ð		CBS tag 25	CBS tag 25	Cost breakdown structure	None	No			
		CBS URL 1	CBS URL 1	Cost breakdown structure	URL	No	Editable url 😮		[T]
9		CBS URL 2	CBS URL 2	Cost breakdown structure	URL	No	www.google.com/[Project ID]/[CBS positi	Project ID	
		CBS URL 3	CBS URL 3	Cost breakdown structure	URL	No		Control CBS	
2		CBS URL 4	CBS URL 4	Cost breakdown structure	URL	No		WBS phase cod CBS position	le
		CBS URL 5	CBS URL 5	Cost breakdown structure	URL	No		Account code	
		Estimating resources	Estimating resources	Estimating resources	None	No			
5		Ectimating recourses	Estimating recourses	Estimating resources	None	No			

These quick links are accessible in the CBS and can contain detailed information pertaining to the cost item and project, which can also link to external reports.

In the CBS cost item details attributes slide-out panel, the URL is concatenated to include the attributes defined. A link is included on a cost item that opens a new tab.

			Fiscal calendar settin	1028 Miscellaneous Revenue	Internal

	✓ 5	Materials	1084	P	Ø	Ø	P	Ø	\$ 1,750,000
	5.1	Earthwork - Mater	1085	P	Ø	Ø	P	Ø	\$ 250,000
	5.2	Concrete - Materi	1086	P	Ø	Ø	P	P	\$ 1,000,000
	5.3	Structure Steel	1087	P	Ø	Ø	P	P	\$ 500,000
	6		1088	P	Ø	Ø	P	Ø	\$ (

At the organization level, CBS URL columns 6, 7, and 8 have been added to the CBS register. When you define a CBS URL, it is then applied to each of the organization's projects.

»					GLOBAL OPTIONS	HOME PAGE FISCAL CALENDAF
		List name	Label name	Associated entity ↑	Field values	Inherited from parent org
•		CBS tag 24	CBS tag 24	Cost breakdown structure	None	No
		CBS tag 24	CBS tag 25	Cost breakdown structure	None	No
*		CBS URL 1	CBS URL 1	Cost breakdown structure	URL	No
2		CBS URL 2	CBS URL 2	Cost breakdown structure		No
- @	0	CBS URL 3	CBS URL 3	Cost breakdown structure	URL	No
P	0				URL	
6	0	CBS URL 4	CBS URL 4	Cost breakdown structure	URL	No
B		CBS URL 5	CBS URL 5	Cost breakdown structure	URL	No
-		CBS URL 6	CBS URL 6	Cost breakdown structure	URL	Yes 🤰
3		CBS URL 7	CBS URL 7	Cost breakdown structure	URL	Yes 🤰
		CBS URL 8	CBS URL 8	Cost breakdown structure	URL	Yes 🤰

Creating organization-level CBS URL links lets you associate shared documentation, such as external standard reports that are used across the organization. Instead of setting up links for every project, you can create a CBS URL link in Settings > Custom Lists.

12.2.9 Attribute Definitions

Attribute Definitions are used to define project attributes which can be of the types text/date/number or can have source values from Organization, Project, and Market master data. These definitions are inherited to all projects in the organization.

					Cance		
	*Fuel type	∗Cost per UoM	*Currency	*UoM	Account code

12.2.10 Menu Options

The below URL addresses specific to InEight products are updated when licenses are purchased or activated. The URLs are customer specific. The ability to maintain the URLs are intended for users with account admin only (root Org Setting) permissions. If no other products are purchased or activated, the URL opens an InEight related page to learn more about the products.

onfigure the URL	addresses for your InEight Products		
5	, ,		
Product	* URL	* Target	
Model	https://ineight.com/solutions/virtual-design-constr	New tab	-
Document	https://ineight.com/solutions/collaborative-docum	New tab	
Basis	http://my.basisplanning.com	New tab	

12.2.11 Project Tracking (organization & project level)

Under the Control tab, Project Tracking settings configure how your project tracks progress and percent complete in Control.

These settings include the following options:

- What level to lock down your CBS structure to
- What value to base percent complete off
- If percent complete are capped at or allowed to exceed 100%

12.2.11.3 Tasks

The first option in the Tasks Section lets you maintain your CBS structure at a specific level. Selecting yes, lets you determine your own CBS structure level.

Tasks			
Maintain CBS Structure at a specific level?		Level to Maintain CBS Structure at	
No			
Generate WBS phase code automatically?			
Yes			
WBS Phase code generation method		WBS Phase codes start value	
Continue numbering from the last generated number	•		
\sim	(⊘)		
Enable manual snapshots (

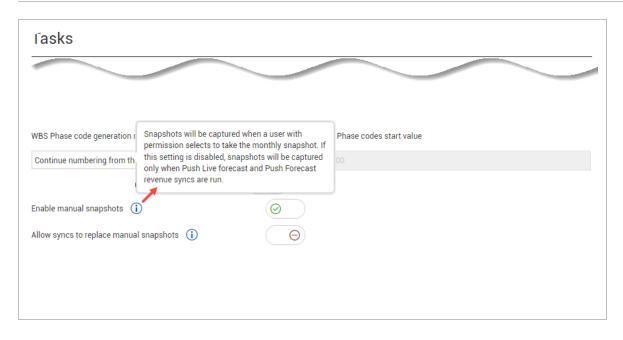

The second option is WBS Phase Code. Select Yes or No under the Generate WBS phase code automatically?

- · Yes indicates phase codes for newly created cost items to be automatically generated
- The WBS Phase code generation method regenerates all values beginning from the specified start value
- The value entered in the WBS Phase code start value is the phase code for the first cost item created. When automatic phase code generation is activated, the proceeding new cost items is automatically created based on the phase code generation method selected.
- No indicates phase codes for newly created cost items must be manually entered

Enable Manual Snapshots

You can create a manual snapshot of Control project data in the CBS and Pay Items registers.

If you have the *Enable manual snapshots* setting enabled, you can create a snapshot at any point in time, separately from any of the above-mentioned syncs.

When the Enable Snapshots settings is enabled, you can select the **Take Live Snapshot** option from the Current Live Forecast drop-down menu in the CBS to capture current values in the Live Forecast, Current Budget and Current Estimate.

Allow syncs to replace snapshots

When the *Enable manual snapshots* and the *Allow syncs to replace manual snapshots* toggle is turned to *On*, the manual snapshot is replaced when the Push Live Forecast and/or Push Forecast revenue is synced. If this setting is disabled, syncs are replaced with manual snapshots.

WBS Phase codes start value

12.2.11.4 Actuals

The image and table below give a brief explanation of Project Tracking: Actuals settings.

Overview – Project Tracking: Actuals

	Title	Function
1	Calculate % complete	Calculate percent complete for individual cost items as a percentage of: • Forecast (T/O) Quantity • Current Budget Quantity
2	% complete cap	Cap any cost item percent complete at 100%
3	Calculating roll-up method	Calculate percent complete for roll-ups, such as superior cost items and account codes by Cost or Manhours

Overview – Project Tracking: Actuals (continued)

	Title	Function
4	Roll-up % complete	Roll-up percent complete weighted byCurrent BudgetCurrent Estimate
5	Calculate man hours earned at the parent level by	Calculate man-hours earned for roll-up items by summing the man- hours earned of the contributing items (regardless of roll-up items percent complete). Option 1: The summation of man hours earned from direct child items Option 2: The total man hours multiplied by percent complete
6	Get actual cost from Contract	When turned on, the subcontract actual cost is received from Contracts. Actual costs from Contract can consist of a goods receipt, an accrual, or an invoice receipt/payment form. If a goods receipt and an invoice receipt come in at the same time for a record, the higher cost is recognized and not duplicated.
7	Drive committed cost values from Contract	When turned on, the committed costs is driven from Contracts. When turned off, committed costs are derived from the ERP.
8a	Update % complete from Contract	Quantities that are claimed in Contract for SOV items updates the percent complete in Control when the Update % complete from Contract switch is enabled. Updating the percent complete provides you with another way to claim quantities against schedule of value items in Contract. When quantities are claimed against a schedule of values item in Contract and the Get quantities sync is executed in Control, the cost items actuals quantity completed gets updated with a percentage claimed toward the contract's schedule value total cost.

12.2.11.5 Estimated Actuals

This feature allows estimated actuals to be accrued to a cost item, then used to contribute to the forecast. This results in the forecast being more accurate. The estimated actuals are calculated based on the cost category values associated to the cost items.

When **Turn on estimate actuals** is enabled, you can choose to turn on or off estimated actuals based on the cost category. You can enable estimated actuals in both Control and InEight Progress.

When any one of the following cost categories are enabled, the Claim Actuals tab shows the option when claiming quantity to accrue estimated cost based on the amount claimed.

Estimated actuals	6							
Turn on estimated actuals:	Furn on estimated actuals:							
Actual type	Enable estimat Control	ed actuals for: Progress						
Labor cost	\bigcirc	\bigcirc						
Labor man hours	\bigcirc	\bigcirc						
Construction Equipment cost	\bigcirc	\bigcirc						
Construction equipment hours	\odot	\bigcirc						
FOM Rented Equipment cost	\bigcirc							
Supplies cost	\bigcirc							
Materials cost	\bigcirc							
Subcontract cost	\bigcirc							
Fees cost	\bigcirc							
Allowance cost	\bigcirc							
G & A cost	\bigcirc							
Undefined cost	\odot							

You access the Claim actuals tab from the Control > Workspaces page by right-clicking the cost item on the CBS tab and selecting Actuals details. The Actuals details slide-out panel is then shown where you can select the estimated actuals option.

	CLAI	M ACTUALS ACTUALS HIS	STORY	
QUANTITIES	Forecast (T/O) qty	Qty complete (to date)		
MAN HOURS	200.00	0.00		
EQUIPMENT HOURS	Claimed quantity		Estimated actual cost to be added	ded on claiming:
COST	Claimed quantity		Supplies	\$ 0.00
	Posted date		Materials	\$ 0.00
	10/17/2019		Subcontract	\$ 0.00
	Notes			4000
	Notes			
	+ Add claimed quantity	Sclaim quantities for multiple cos	st items	

On the CBS tab, the estimated actuals are shown as columns. These values can be added to the Confirmed actuals (actuals that were imported into Control or manually entered in Control) to get all the actuals for the project that are available. This helps you more accurately forecast your project.

CBS		ACS		F	AY ITEMS
Ð	Live forecast	Actuals	10/17/20	19 to 10/1	7/2019
── ★ Fo ── meth	recast od =	Confirmed actual cost	-1	Confirmed actual qty	1
Q Curre	nt estimate		\$ 0.00		0.00

12.2.11.6 Enabling actuals for Progress

Using an example for Progress, if you have labor cost and man hours enabled for Progress and there is an improved daily plan in Progress, those man-hours go over to Control automatically as estimated man-hours. Then, those man-hours generate an estimated cost based on the operational rates for that resource. In this case, it would be using the Straight time rate, the Double time rate, and the Over time rate. The same process can happen for construction equipment and equipment hours. For example, if you claim equipment hours in Progress and they are in an approved daily plan, then those hours go over to Control as estimated equipment hours. The operational and equipment resources also have a unit cost. Those hours times for that unit cost can then be used to generate an estimated construction equipment cost.

12.2.11.7 Enabling actuals for Control

If man-hours and equipment hours are enabled, then you claim a quantity, it can generate estimated man-hours and equipment hours if there are CE amounts on those hours. For example, CE man hours per unit and CE equipment hours per unit can be estimated. If those are nonzero and you claim quantity, then the estimated man hours and equipment hours are generated.

Tasks					:		< • >							
		- D	Description	1	WBS phase 🛫 code	/Hrs (to date)	Equipment hours (to date)	Estimated actual cost	a	Estimated actual man	Estimated actual equipment	CE Mhrs/Unit	CE equipment- Hrs/Unit	Last estimated actual man hours reversal
	41	C	Cost item 1		01	0.00	0.00	\$ 0.00	0	0.00	0.00	0.00	0.00	
	42	C	Cost item 2		02	0.00	0.00	\$ 0.00	0	0.00	0.00	0.00	0.00	
	43	C	Cost item 3		03	100.00	0.00	\$ 0.00	D	0.00	0.00	10.00	1.00	03/29/2021 3:07:
	44	C	Cost item 4		04	0.00	0.00	\$ 0.00	D	0.00	0.00	0.00	0.00	

If you do not have estimated actuals enabled in the project settings, you do not see any of the Estimated actuals columns, and you also cannot add them to your view. Some of these columns are a direct correlation with Progress.

Some of these columns are also from Control. The columns from Progress generate actual man-hours and equipment hours from claimed quantity in Control. These columns come over directly from Control and they affect your forecasts. Any estimated man-hours are included in your man-hours to date and then the estimated actual cost is included in your total cost to date.

Your forecast equations look for total cost to date, man-hours to date, and equipment hours to date to generate forecasts.

12.2.11.8 Estimated actuals process overview

When you have synced everything from Progress, it is now in your ERP system. You can then bring in the man-hours and equipment hours through the sync.

r.	Estimated actual cost	Estimated actual man hours	Estimated actual equipment	CE Mhrs/Unit	CE equipment- Hrs/Unit	Last estimated actual man hours reversal	Last estimated actual equip hours reversal	Issue
0	\$ 0.00	0.00	0.00	0.00	0.00			
0	\$ 0.00	0.00	0.00	0.00	0.00			
0	\$ 1,250.00	110.00	20.00	10.00	1.00	03/29/2021 3:07:2	03/29/2021 3:08:7	
0	\$ 0.00	0.00	0.00	0.00	0.00			

After the sync is completed, you can reverse the estimated actuals as they have been accounted for as confirmed actuals by bringing the actuals through the sync.

The Estimated columns are only general estimates. They are not confirmed hours until synced with an ERP or an external payroll system. With an ERP you can make changes to where you can have taxes added on which would raise the price for the estimated actuals. Estimated actuals that go into Control from Progress are not guaranteed to be 100% correct. Your ERP is what confirms the final cost.

12.2.11.9 Reversing estimates

When you bring in values from your ERP system, you can reverse your estimates with the actual values as the replacement.

NOTE If you keep the estimated values without reversing after syncing with ERP system, those values are detected as double values.

Reversing Estimated Actuals

- 1. From the CBS, select the cost items you want to revert actuals.
- 2. Select the Actions drop-down menu.
- 3. Hover over Reverse estimated actuals. Then, select **Reverse estimated actual eqiup hrs and const...**.

		BS		ACS	PAY ITEMS
Actions 🝷 (+) 🗹 😣

	Reverse estimated actua	I MHrs and labor cost			
	Reverse estimated actua	l equip hrs and const			

4. Click **Yes** to confirm reversal.

You can also select Reverse estimated actual cost or Reverse estimated actual MHrs and labor cost.

5. In the CBS, look for the Last estimated actual man hours reversal or Last estimated actual equipment hours reversal columns.

	Estimated actual cost	Estimated actual man hours	Estimated actual equipment	CE Mhrs/Unit	CE equipment- Hrs/Unit	Last estimated actual man hours reversal	Last estimated actual equip hours reversal	Issue
	\$ 0.00	0.00	0.00	0.00	0.00			
	\$ 0.00	0.00	0.00	0.00	0.00			
	\$ 1,250.00	110.00	20.00	10.00	1.00	03/29/2021 3:07:2	03/29/2021 3:08:7	
)	\$ 0.00	0.00	0.00	0.00	0.00			

Those columns show the date of the last time you reversed the amount.

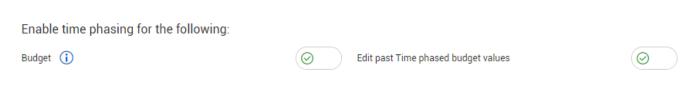

In the actual history, the reversal shows as negative entries when you have successfully reversed the estimated actuals.

12.2.11.10 Time Phasing budget

Time phasing your forecast lets you take your forecast and break it down into more consumable, estimate related time blocks/periods. This gives you more visibility into what activities and costs are going to occur in smaller time periods. Time Phasing is explained further within the Forecasting lesson, under Time Phased Forecasting.

Time phasing the budget lets you plan out where to spend money in the months of the active fiscal calendar for your project. Time Phased Budget is explained further within the Revenue lesson, under Time Phased Budget.

Time phasing

12.2.12 Forecast (organization & project level)

12.2.12.11 Time Phasing

Time phasing your forecast lets you take your forecast and break it down into more consumable, estimate related time blocks/periods. 12.2.12.12 Forecast

The image and table below give a brief explanation of Project Tracking: Forecast.

Overview – Project Tracking: Forecast

	Title	Function
1	% complete for delta from straight- line	% complete threshold for delta from straight-line calculation: By configuring the value of % Complete threshold, you can determine the equation used for the Delta from Straight-Line column depending on if those cost items have their % complete greater than or less than the value set in configurations. Changing the threshold and impacting the formula is necessary because when a cost item has not been sufficiently completed, the actuals data is not yet reliable enough to predict the final anticipated cost (forecast cost) of that scope of work, so a different equation should be used until that cost item has been sufficiently completed. For example, if the threshold is 3% complete, and a cost item is less than 3%, then delta from straight line = Forecast total cost - CB total cost. Once the cost item has reached 3% complete, then the calc switches to Forecast total cost - Average performance total cost

You can set manual forecast notes to be mandatory when switching to a manual forecast type. When the Mandatory notes for manual Forecasts switch is set to *On*, entering forecast notes is mandatory for Manual (EAC) and Manual (ETC) forecasts.

Forecast	
% complete value at which delta from straight line calculation utilizes average performance	Mandatory notes for Manual forecasts (
5	Θ

When manually forecasting, notes are required to be entered in the Forecast Notes dialog box. Once confirmed, the notes are captured, and the forecast method automatically changes to *Manual*.

This feature helps to keep track of manually entered forecasts. You can use the notes to explain the forecast. For example, you can enter a rationale for why a manual forecast is being used.

12.2.13 Estimate Resources (organization & project level)

The Wage rate composition determines what percentage of each labor hour will be calculated at the scale 1, scale 2, or scale 3 rate.

Wage rate compositio	11	
Scale 1	Scale 2	
80	10	
Scale 3		
10		

12.2.14 Schedule (organization & project level)

Under the Schedule sub-tab, you can define the data source for your project's schedule using manual entry or import using and XER type file. You can also create custom cost curves to apply to your progressed work, based on actual costs and schedule. Plug day calculations and Schedule ID's are also maintained in the Schedule tab.

Define project schedule

						Materials		0.00 %	Installed equipment		0
									1.		
						Subcontract		0.00 %	Supplies		0
						Subcontract		0.00 %	Supplies Unique resources will apply markup perc		0.

You can change the Retention percentage, Tax rate, and Payment Timing at the cost category level.

Revenue and Cost Timing

Category	Retention	Tax	Payment timing	Next months
Labor cost	5.00 %	0.00 %	Same month	
Construction Equipment cost	2.00 %	0.00 %	Same month	
FOM Rented Equipment cost	0.00 %	0.00 %	Same month	

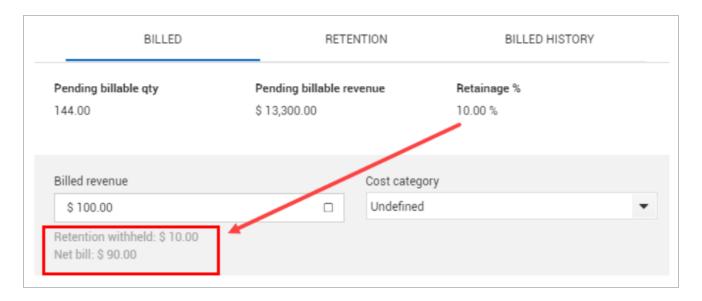

You can set the average calendar days elapsed from the billing collection, in addition to setting the end of project date to any of the options available in the drop-down menu.

You can also enter a default retainage percent that is held back from each bill on the pay items. Pay item retainage creates an incentive for contractors to complete contracted work on a project. Typically, contractors do not get paid the total amount of money until all work or a set milestone is completed. With pay item retention, an agreed upon retainage percentage is held back by the owner for each bill by the client until the owner agrees to release the retention.

When changing the Default retainage percent setting you can choose to either update all existing items on a project, update matching existing pay items, or only apply to pay items created in the future.

Average calendar days elapsed from billing to collection	End of project date
34	Project end date 🔹
	Project end date
Default retainage percent	Forecast completion date
5.00 %	Contract completion date
	Certificate of substantial completion (expected)
	Certificate of final completion (expected)
	Certificate of final completion (expected)

When it is time to bill for a pay item, the retainage percentage is used to automatically withhold the percentage of the bill specified in the Billed Revenue details slide-out panel. You can also see your adjusted net bill which excludes the retention withheld amount.

On the Pay Items page, the Net billed revenue shows \$90.00, while \$10.00 is being withheld.

≫ Pay item position =	Pay item number	Description	Billed revenue	Retention released	Retention withheld	Net billed revenue	Retainage %	gty -	Reven earned
1	001	Earthwork - Labor & Material	\$ 5,000.00	\$ 0.00	\$ 0.00	\$ 5,000.00	0.00 %	100.00	\$ 0.00
2	002	Concrete - Labor & Material	\$ 100.00	\$ 0.00	\$ 10.00	\$ 90.00	10.00 %	0.00	\$ 0.00
3	003	Steel - Labor & Material	\$ 0.00	\$ 0.00	\$ 0.00	\$ 0.00	0.00 %	0.00	\$ 32.28

You can also release and track your full or partial retention amounts in both Billed Revenue Details and Bill Multiple Pay Items, set a retention release date, then view the results in the Pay Item register.

When approving contract adjustments from Change to Control, pay item amounts are not required to equal the amount received from Change if the Enforce change order price values to match between

Control and Change is turned off. In Settings > Control > **Revenue**, disabling the switch to the*Off* position is ideal when pay items are not being used in a contract adjustment.

The example below shows a CCO agreed price of \$101.00 and an Adjusted current price of \$22.00. When advancing to the Summary page, you can now approve the contract adjustment without the CCO agreed price and Adjusted current price matching.

	/ Settings						
	PROJECT TRACKING	FORECAST ES	TIMATE RESOURCES	SCHEDULE	REVENUE	_

When the Enforce change switch is enabled, the error message below stating that the contract adjustment cannot be approved shows when the Adjusted current price does not equal the CCO price.

12.2.15.16 Billing method default earnings rules

You can also manage the settings for billing method default earning rules, pay item forecast quantity rollups, and the markups. You can select the default earnings amounts based on forecast takeoff quantity. The default earnings are calculated using the forecast takeoff quantity of the cost item and comparing it to the total forecast takeoff quantities of all of the cost items assigned to that pay item to generate the percentage.

The Fixed final price and Unit price settings let you select a default way to calculate those earnings amounts based on takeoff forecast quantity or CE final cost. After the settings are saved, all of your fixed final price pay items that normally calculate based on CE final cost and unit price then calculate forecast takeoff quantity or any of the other options you select. You can still modify this selection at the pay item level.

12.2.15.17 Pay item forecast takeoff quantity rollups

In the Revenue tab, you can manage settings for Pay Item Forecast takeoff quantity rollups. This setting is used for pay item unit price only.

Pay item to Cos	Unit price pay item Forecast (T rollup based on contributing co (T/O) quantitie	cost items' Forecast
Enable pay item Forecas	st (T/O) qty rollups 🕕	Enable pay item Forecast (T/O) qty roll down 🕕
\bigcirc		Θ

The toggle is only applicable to unit price pay items. It lets you enable the pay item forecast take-off quantity to be calculated based on the sum of all the assigned cost items forecast takeoff quantities.

When enabled, you can no longer edit your pay item forecast takeoff quantity in the Pay item register. If you click a field, you can no longer edit that field.

The Fixed final price and Cost plus values can be edited. The calculation is the sum of all the contributing cost item's forecast takeoff quantities. It can contribute to the pay item forecast if it has the same unit of measure.

For example, you cannot add unlike units of measure. Only cost items that have the same unit of measure as the pay item can contribute to that pay item's forecast takeoff quantity.

				CBS		ACS		PAY ITEMS	CHANGE	REGISTER	AUDIT	200

								Earnings amounts based on:	Forecast (T/0)	quantity O C	E final cost				_		🖌 Update e	amina	rule
								CBS Position	Description		Forecast (T/O) qty		UoM		0	E final cos		uning	Ture
									Compton				00111		Ξ	2 11101 000			
								41	Cost item 1			150.00	BOX				\$1,	500.00	-
								42	Cost item 2			100.00	Bag	3			s	200.00	-
											4							Þ	
																	\$ 1,70	00.00	

In the image above, the two cost items have different units of measure.

Cost item 1 has a unit of measure of box, which also has the pay item contribute quantity box checked. Cost item 2 has a unit of measure of bag with the pay item contribute quantity box unchecked. When you go into the update earning rules editor, you cannot check the pay item contribute quantity box for cost item 2 because the unit of measure does not match with cost item 1.

Calculate earning amour	nts by:						
 Forecast (T/O) quanti CE final cost 	ity						
CBS Position	Descript	Pay item contrib quantity	Earning %	Earning Amount (Forecast)	Earnings Timing	WBS Phas	
41	Cost item 1		100.00 %	\$ 15,000.00	Percent complete	1	-
42	Cost item 2		0.00 %	\$ 0.00	Percent complete	2	
			v			4 📰 🕨	Ŧ
			100.00 %	\$15,000.00			

If you deselect the pay item contribute quantity box for cost item 1, the cost item's quantity does not contribute to the pay item's quantity. Then, the pay item quantity is zero. If it is checked, cost item 1 with the unit of measure of box has a forecast takeoff quantity of 150. This means the pay item also has a forecast takeoff quantity of 150.

In the CBS, you can change the Unit of Measure from bag to box, and then forecast take off quantity updates.

By default they both now have the pay item contribute quantity checked and the pay item forecast take off quantity is the sum of any cost items that have pay item contribute quantity checked.

					CE	3S		ACS	PAY ITEMS	CHANGE RE
Act	ions	• 🕂 🗹	\otimes							
	Tasl	KS					i	Task details	< •••• >	:
		℅ CBS position	Ŧ	Description		WBS phase code	Ŧ	Resource	Forecast (T/O) quantity	UoM
		41		Cost item 1		01			150.00	BOX
		42		Cost item 2		02			100.00	Bag fra 🗸
		43		Cost item 3		03			100.00	PLS
		44		Cost item 4		04			1.00	PLS

For example, with cost item 2 updated, the forecast takeoff quantity from of 100 is added to the forecast takeoff quantity of cost item 1. The total forecast takeoff quantity is now 250. It includes both of them since they now both have a matching unit of measure.

Also, this affects you earnings percent as well if you have forecast takeoff quantity selected. The pay item contribute quantity for both cost items drives your earnings percent if the forecast takeoff quantity radio button is selected. It also decides which cost items are going to contribute to the pay item's forecast takeoff quantity.

NOTE When you turn on the pay item forecast quantity rollups, the Pay item contribute quantity column does not show by default. To add it, go into the columns chooser, and then select that column. After it is brought into your view, it remains there until you deselect it from the columns chooser.

emo									
otal Price	Pay Quant	ity		Unit Price		Billing	method		
2,700.00	27.00			\$ 100.00		Unit p	rice

CBS Position	E Sorecast (T/O) qu	uantity OC		ritem contribute qu Pay item contribute	Earning %	1	Earning Amount	-	

When you are in the Update earnings rule dialog box, the Pay item contribute quantity column is a default column in that view because it column is editable in the Update earning rule dialog box. That column is not editable in the main table. You can only select to add it to your main table view in the pay item slide-out panel for informational purposes.

The Pay item contribute quantity column is not available if the setting is off or if you are looking at a unit price pay item. If the setting was turned on and a user brought in the column and then decided to turn that setting off, then those columns would disappear.

12.2.15.18 Pay item forecast takeoff quantity roll down

When the amount of contract deliverables changes on unit price contracts, manually updating all the quantities for every associated cost item can be time consuming. Pay item forecast take off quantity allocations can be proportionally rolled down to the assigned cost items by setting the Enable pay item Forecast (T/O) qty roll down switch to *On* in Settings > Control > **Revenue**.

Pay item to Cost item Forecast (T/O) qt	y relationship	Unit price pay item Forecast (T/O) quantities will roll down to the contributing cost items' Forecast (T/O) quantities
Enable pay item Forecast (T/O) qty rollups ()	Enable pay item Forecast	(T/O) qty roll down

The unit price pay item Forecast (T/O) quantities proportionally rolls down to the contributing cost items' Forecast (T/O) quantities. Pay item to cost item roll down changes also show in the CBS Audit log.

				_	-	2.1.1.1	Site			1.000
					-	2.1.1.1 2.1.1.1.1	Site			1.000 75,181.000

The Allow as-built setting must be set to All or Quantity for the selected cost items.

12.2.15.19 Markup

In Revenue tab, you can configure a default markup percent that applies the markup to the entire project. The Markup percent table adds a markup per cost category and per resource type on all of the cost categories in resources in the project.

	PROJECT	TRACKING ESTIMATE RESOURCES	SCHEDUL	.E REVENUE	OTHERS
General					_
Capital	\odot				
Plan					
Progress	Markup				
Compliance					
Contract	Default markup perce	ent I	0.00 %		
Change			0.00 %		
· Design	Cost categories	Markup percent	Re	esources	Markup percent
	Labor		0.00 % La	abor	0.00 %
	Construction Equip	ment	0.00 % Co	onstruction equipment	0.00 %
	FOM Rented Equip	ment	0.00 % Re	ented construction equipment	0.00 %
	Supplies		0.00 % In	stalled material	0.00 %
	Materials		0.00 % In	stalled equipment	0.00 %
	Subcontract		0.00 % Su	upplies	0.00 %

For example, if you added 10% to Labor resources, then any labor resources automatically have a 10% markup added to it and that affects the resources charge rate. Then that charge rate affects the amount of revenue that cost items can bill for and earn.

After you set labor at 10% and click Save, you are prompted with this dialog box confirming that you are making a change to an existing markup.

	Х
You are making a change to an existing cost category/resource markup on this project. How would you like to proceed?	
Update all existing cost categories and resources in the project. This will change the current charge rates	
 Update matching existing cost categories and resources. This will change the current charge rates for cost items they were modified 	
\bigcirc Only apply to cost items and resources created in the future	
Cancel Confirm	

From this dialog box, you can choose to update all existing cost categories. For this example, it adds 10% resource markup percent for all labor resources.

The option to update matching existing cost categories selection changes the current charge rates for cost items that were modified. Anything that has not been modified such as a labor resource that has not been manually modified, this option overrides it with 10%.

You can also specify whether to only apply cost items and resources created in the future. When selected, no changes are made to existing resources. Any newly created resources, in this example labor resources, have a 10% markup added to them.

Cost categories are applicable in plug cost items that do not have resources or are not resource-driven. The cost categories have only a blanket cost category markup that helps drive the total revenue amount on the cost item.

You can view this information from Markup columns such as Billing rate markup amount, CE billable amount, Markup amount, and CE revenue amount.

ns 🔻	• 🗹	\otimes									E	5	\$ 🖽	•	3	‡≡	
Tasks					:	Task deta	01 Cost item 1										
	CBS position		Description	WBS phase code	7	Resource		DETAILS		ATTRIBUTES	COST CATEG	ORIES	R	ESOURCE	ES

	42		Cost item 2	02			% complete	The forecast in	values	uars in forecast							
	43		Cost item 3	03			50.00 %	Current estimate	• 0 03/25	/2021							
	44		Cost item 4	04													
							ry (Current budget	Total cost (to date)	Current estimate	* Live forecast		t remaining co	at a	Billing rate i amount	markup	>
							contract	\$ 0.00	\$ 500.00	\$ 0.00	\$ 500.00		Forecast remai	ning cost			
							1	\$ 0.00	\$ 250.00	\$ 0.00	\$ 250.00		Markup %				
							wance	\$ 0.00	\$ 0.00	\$ 0.00	\$ 0.00						
							A	\$ 0.00	\$ 0.00	\$ 0.00	\$ 0.00		Open committe	d cost	_		
							efined	\$ 1,500.00	\$ 0.00	\$ 1,500.00	\$ 750.00		Billing rate mar	kup amou	unt		
													CE billable amo	unt			
								0.00	0.00	0.00	0.00		Markup amoun	t			
								150.00	75.00		150.00	_					

The column Markup amount uses the following formula:

• Markup percent x your current estimate = markup amount.

The Billing rate markup amount, for plug cost items is always set to zero because you can only have a billing rate on resources. So if this is a detailed cost item, this is just showing your billing rate markup amount for all of those resources.

The column CE billable amount uses the following formula:

• The Current estimate amount + your Billing rate markup amount = CE billable amount.

The column CE revenue amount uses the following formula:

• The CE billable amount + your Markup amount = CE revenue amount.

The CE revenue amount is how much revenue a cost item can have. This is only applicable for cost plus pay items. You can apply markups on cost items and they do not affect the revenue on those cost items. The markups affect the revenue for cost plus pay items and any cost items that are assigned to cost plus pay items.

12.2.16 Sync Integrations (project level)

Schedule sync integrations to run at specific times such as Pushing the CBS structure or Pushing Billed Revenue.

You can prevent the project from syncing when required cost items are not included by setting the *Prevent project from syncing if required cost items are not added toggle* to Yes.

Required cost items
Prevent project from syncing if required cost items are not added

12.2.17.21 Decimal Precision

The image and table below summarize the different decimal precision options:

Overview – Decimal Precision

	Name	Function
1	Currency	Number of decimal places for currencies. Any field that includes currency data will be affected by this setting.
2	Cost Summary	Number of decimal places for total cost information both at the terminal and non-terminal level.
3	Unit Cost	Number of decimal places for any unit cost displayed.
4	Quantities	Number of decimal places for any quantities displayed.
5	Percentages	Percent complete calculations at both the terminal and non-terminal level.

Numeric fields can be configured to omit decimals for currency, unit cost, percentages, cost summary and quantities.

Review

- 1. How many administrative levels are there when you create a new role?
 - a. 1
 - b. 2
 - C. 3
 - d. 4
- 2. There are several options when setting up project tracking. What setting is NOT included in these options?
 - a. How import of your CBS structure will be configured
 - b. How percent complete for individual cost items will be calculated
 - C. Configuring and naming tags
 - d. Capping percent complete at 100%

Summary

As a result of this lesson, you can:

- Create and manage InEight Control roles and permissions
- Navigate and define the different type of InEight Control project settings
