22.4.3 Release Notes

NOTE:

These release notes include notable fixes or updates in the stated products. If no notes are shown for a product, there are no notable changes for that product.

Change

- Emails are now sent correctly when Change is configured for roles receive one email for each executed CCO. Email is not sent when the submitter is the CCO execution approver.
- The Cost item category slide-out panel now loads correctly the first time it is opened.
- Formatting is now applied for the tags in the second document onwards in when documents are merged.
- When you click to approve an item, it no longer stays on the Action items tab but progresses to the next step.
- Issue, PCO and CCO logs now load correctly when there are multiple users.
- The organization-level change document templates are now available in the organization and project-level settings.
- Required cost items that are added to the project are now included in the Push CBS structure sync.
- The Billing Rate no longer shows zeros when the unit rate driver is switched between Current budget and Current estimate.
- A unique CCO identifier is now used when you successfully create a CCO.
- When modifying the cost item pricing grid, Save is now enabled before the Push PCO/CCO option from the Actions drop-down menu.

Contract

- In the Progress view the header row in line items aligns correctly.
- The date now shows correct when a Scheduled or Forecasted milestone date is edited and you click out of the cell. The date changes also save when attempting to edit an Actual date in the grid.
- When the execute and publish option is selected in VCOs, the VCOs show as published even after refreshing the page.
- The payment form title is now used to set the description in the Payment Form Request API.
- When attaching a supporting document in Contract, the document is now sent to the correct project in InEight Document.

Control

- Cost categories are now rolling up to total CE cost correctly.

Report

- You now can manage user access to dashboard data for only the projects that the user has permissions to.
- The user selection field has been updated to correctly show the user names.
- The Time & Extra Pay report now shows all the report data after the last refresh date logic was modified to correctly show the actual last refresh date.
- User will now receive the correct report and no longer experience errors after changes were made to the Azure environment and the report display utility.
- The Design Quantity Claiming History report was updated to correct the Modified date and Claimed date values.
- The Qty Claiming History report was updated to correct the dataset error experienced in some projects.
