

InEight Cloud Platform

22.6.3 Release Notes

NOTE:

These release notes include notable fixes or updates in the stated products. If no notes are shown for a product, there are no notable changes for that product.

Change

- Project-level custom lists now show correctly in drop-down list fields.
- Vendor-contributed value tags no longer return blank values when used in a vendor collection table.
- When adding additional columns to an Enterprise viewset on the Issue log, the columns now load correctly.

Contract

- Payment Form API (Requests) values and values in InEight Contract windows no longer have unexpected positive signed values with credit values.
- Line items that are added before navigating the breadcrumbs from the VCO line item detail page to the Contract main register are now saved to the correct contract.
- DOR entries no longer disappear when navigating throughout the module and when saving updated entries in other fields.
- The Export with data option now includes only the columns in the view when it exports and creates a spreadsheet file.
- After making the Remaining to allocate value zero and submitting the Payment form, the payment form line item values are no longer cleared, and the Remaining to allocate value remains.
- The Save and start approval option will now process without errors. The Agreement ID was updated and is now restricted to 50 characters, so that the value is validated.
- Contract import now supports alphanumeric Vendor IDs when an agreement ID is also available in the Excel spreadsheet.

Control

- When required cost items are added to the project, they are now included in the Push CBS structure sync.
- Committed cost values coming from Control are now stored as soon as the payload is received, even if the Contract details payload has not been received.
- The Time phased budget has been updated and costs are now appearing in the correct months.
- The Cost item API is no longer failing when sending cost items to very large projects.

Progress

- Timecenter and Daily plan integration issues have been resolved and now integrate successfully.
- Performance improvements have been made in the Timecenter grid and now timecards are being retrieved successfully.

Report

- The sort order in the Change Order Summary report has been modified to show change orders in sequential order.
- The Responsible party information has been modified to correctly join the Employee Id and email address.
- Performance improvements have been made to the ACS report to prevent the report from timing out.
- Control Change Order Cost Table has been updated and now the values are filtered correctly.
- The Gantt chart functionality in dashboards has been replaced with new functionality.
