# LESSON 1 – WORK PACKAGING OVERVIEW

InEight Inc. | Release 24.5

# 1.1 PLAN WORK PACKAGING OVERVIEW

InEight Plan is an application within the InEight portfolio of products. It is a tool for engineers and superintendents to plan their work and track quantities during the construction of the project.

InEight Plan is organized into two modules:

Plan Modules					
Work Packaging	Creating and managing work packages.				
Quantity Tracking	Creating and managing components and claiming schemes. Claiming completed quantities.				

### 1.1.1 InEight Plan Work Flow

The below workflow illustrates the functions of both InEight Plan and InEight Progress, and how data flows between the two applications.

#### Scenario

You are a Project Manager about to start construction of a Steel Structure project. Your first step before starting construction is to break the project down into pieces that are more manageable.

The image below depicts a layout for a steel structure project. The project consists of erecting 30 separate steel structures on opposite sides of a road. Each structure or module has been assigned a number 1-30.

# 1.1.2 Work Packaging

Work Packaging breaks down projects into small, manageable scopes of work so that operations can be assigned to responsible supervision, executed, and tracked effectively. In InEight Plan, you can break the work of your project into construction work areas (CWAs), construction work packages (CWPs) and installation work packages (IWPs).

As mentioned in the scenario above, the scope of the Steel Structure project was too big to manage without segmenting it down to work packages representing one to four weeks' worth of work. In Plan, this breakdown of the project could look like this:

#### 1.1.2.1 Work Package Details

Work package details include the following information:

- Work sequence
- Budget

- Resources required
- Components and quantities
- Constraint Management
- Safety, quality, and environmental concerns

#### For your Steel Erection work plan, you can create a work package for each module.

NOTE In Work Package Management, you will learn about work plans and work packages in detail, including how to create them and define plan details.

#### **1.1.2.2** Comprehensive Workflow

The diagram below displays both sections of Plan and how they integrate with InEight Progress, InEight Control and your Payroll system.

You will notice the areas where you create associations between work packages and daily plans, work packages and components, and components and claiming schemes.

The details of this workflow and the step by step functions within it will be covered in the remaining lessons of this and the Plan Quantity Tracking module and the Progress module.

This page intentionally left blank.

# **LESSON 2 – GENERAL NAVIGATION**

# 2.1 PAGE NAVIGATION

In this lesson, you will explore the layout and start to navigate around the application.

You access InEight Plan through your web browser. When you first log in, you will land on the **All projects & organizations page** within the **InEight project platform**. Here you can select any your projects.

			PI	ROJECTS	ORGANIZATIONS			
•							i	Q
	ID 🕆	Name		Status 📃	Organization	Created by	Created on	
	105091	Steel Structure Job		Active	S100000 - (PKS Inc)	jeremy cheek	06/04/2018 3:30:26 F	M

From the All projects & organizations page, selecting a project navigates you to the home page for that project. From your project home page, there are two different ways to access the **Work Packaging module** of Plan.

#### Navigate to the Work Plans Module via the Project Home Page

1. From the All projects & organizations page, select your project.

								_

# **Overview – Work Plans/Packages Page**

	Title	Description
1	First Level Menu	Shows the selected project and provides access to favorites, All projects and organizations, reports, master data libraries, and suite administration.
2	Second Level Menu	Displays the list of applications (Control, Plan, etc.), and navigates you to other project settings.
3	Third Level Menu	Navigates to individual modules inside each application (e.g., Contract > Bid packages, Plan > Quantity tracking). Options in this menu are dependent upon the application you are currently using.
4	Help Menu	Contains Walkthroughs to walk you step by step through processes within the module.
5	Notifications and User Profile	View notifications, user profile and log out.
6	AWP Panel	Allows you to access work plans (Work Packaging tab) or see planning progress (Planning Schedule tab).
7	Actions Menu	Select available actions for the current register tab you are viewing.

#### Overview – Work Plans/Packages Page (continued)

	Title	Description
8	Toolbar	Contains functions for the page you are on: add, edit, delete, export, import, show details, and search.
9	Block View	View the Work Plans/Work packaging page in a card view layout, the page displays the most recent saved work package, as well as a card for each work package associated with the CWA or CWP in the same order and data as the default grid view.
10	Column Chooser	Allows you to add or hide columns to make the plans/packages list user specific.
11	Query builder	Lets you add, edit, delete, copy, and share queries to search for work areas and packages.
12	Work Plans/Packages Register	List of all work plans and packages in your project.

## **Overview – Area/Construction/Installation Work Packages Pages**

	Title	Description
1	Breadcrumbs	Navigational links that allow you to track your path from the page you are currently viewing back to the work plans/packages page. Furthermore, identifies what and where you are within a work package.
2	Tabs	Navigate between different functions on a page. The blue line indicates what tab you are currently on.
3	Toolbar	Contains functions for the page you are on: add, edit, delete, export, import, show details, and search.
4	Block View	View the Work packages page in a card view layout, the page displays the most recent saved work package, as well as a card for each work

## **Overview – Area/Construction/Installation Work Packages Pages (continued)**

	Title	Description
		package associated with the CWA or CWP in the same order and data as the default grid view. Not pictured: When in block view, you can use a toggle to switch between viewing calculations in Cost % Complete and Mhr % Complete.
5	Column Chooser	Add or hide columns to make the plans/packages list user specific.
6	Side Panel	Contains a brief summary of your CWA, CWP, or IWP, fed from their overview and workspace tabs as well as associated components. Percent complete charts are shown for man-hours and cost in dollars.

TIP

The **Construction Work Packages/Work Packages** tab displays all the work plans that you have created or are assigned to as the Superintendent, Engineer, or Foreman.

# 2.2 COLUMNS

Customize columns according to your preferences from the Work plans/packages page. Changes you make to the placement of your columns will be retained the next time you access any page you have customized.

## 2.2.1 Move Columns

Drag and drop to move a column from one place to another to customize your view.

**Move Columns** 

1. On the Work plans/packages page, click on and hold a column header.

We	ork plans							
A	ctions • + + ×							
	😣 Work package name 👘	ID $\overline{-}$	Description	 Schedule ID 👘	Start date	-	End date	
	C North		North					

2. Drag and drop the column in a new location.

Description								0 - 0		
Description							9 1 1	(+) (+) (×)	ions 🔻	Act
	End date	 Start date				<ul> <li>Description</li> </ul>	T ID	k package name	⊗ Wor	
North				iption	North		ŕ	North		
South South					South			South		

### 2.2.2 Sort Columns

Sort in ascending or descending (both for alpha and numeric fields) order on any column by clicking one time on the column header.

#### Sort Columns

- 1. On the Work plans/packages page, click on any column header to sort the column in ascending order.
  - Notice the yellow "up arrow" designating you are sorting in ascending order

Description	Schedule ID	\Xi Start date 🁔	- End date

- 2. Click on a column header again (a second time) and the column will filter in descending order.
  - Notice the yellow arrow is now pointing down

#### 2.2.3 Column Chooser layout

In quantity tracking, the Lock icon shows to the right of each column's name in the Selected columns section of the dialog box. To lock a column's position, click the unlocked icon next to the column name. The unlocked icon changes to solid blue, and the column position cannot be moved.

Luke No	14.025				Activity	Overhead																	

#### 2.2.4 Filter Columns

Filter columns as a way to see relevant information pertaining to your specific needs.

#### Filter Columns

- 1. On the Work plans page, click the **filter pyramid** of any column header.
- 2. In the resulting drop-down list, select an **operator**.

3. In the first search box, enter a **date**.

Scheduled star	Scheduled finish
06/18/2018	Show items with value that:
06/18/2018	Is equal to 🗸
06/18/2018	6/18/2018
	And 👻
	Is equal to
	Ċ
	Clear Filter

- 4. Click **Filter**.
  - The table now only shows items that qualify for your filter
  - Notice that the filter pyramid is now in yellow indicating that this column is filtered

	) 🖻 🛈 🔍
Work plan for the structural steel of the North area     North Area Steel Erection Work Plan - 001     06/18/2018	Scheduled finish
	06/29/2018
South Area Steel Erection Work Plan -001 06/18/2018	06/29/2018

5. Select the **filter pyramid** again. Hover over **Filter**, then click **Clear** to remove your filter.

Scheduled star	Scheduled finish
06/18/2018	Show items with value that:
06/18/2018	Is equal to 🗸
06/18/2018	6/18/2018
	And 👻
	Is equal to
	Clear Filter

# TIP Apply multiple rules to your filter. For example, setting a "Contains" **or** "Is equal to" filter for your column would allow you to bring in two distinct results at once.

# 2.3 DATA BLOCKS

On the Workspace tab of an opened installation work package, the work package details are contained within data blocks. Each data block is a set of columns grouped together based on categories of information. Data blocks help you to organize and manage all the columns on a page.

Data blocks are customizable, and can be viewed moved up or down in the register. Sort and filter data block information to organize your view. The information in each data block is displayed in a grid like format, maintaining a spreadsheet look and feel.

# 2.3.1 Add Data Blocks

#### Add Data Blocks

1. From the Work plans/packages page, select a **hyperlink** under the ID Column for an installation work package (IWP).

(Steel T	raining Job) 👻 Plan 👻 Work packaging 👻
Work Packages	Work packaging > North
North	Work package name     □     ID     □
North	Image: CWP- North Area Steel Ere         90982           Image: Image: CWP- Steel Erection         90984
	IWP- Steel Erection - Module 001

- 2. Once you are in an individual work plan, select the **Workspace** tab.
- 3. From the **Manage workspace slide out panel** on the left, select data blocks to include in your workspace.

Work packages	Work packaging > No
IWP- Steel Erection 35734 Steel erection of Module 001 Manage workspace	Work sequence Work step Description
<ul> <li>Equipment</li> <li>Materials</li> <li>Budget</li> <li>Components</li> <li>Constraint management</li> <li>Lessons learned</li> <li>Quality forms</li> </ul>	
Work sequence Tools Temporary structures Labor Goals Quality Safety	

NOTE

Scroll up and down between the data blocks to view all your data blocks.

#### 2.3.2 Navigate Data Blocks

Use the arrows at the top of your data block to view more columns associated with each data block that are not in the current pane.

Work sequence	<•>	Planning complete	↔ Add work step	:

The number of dots between the arrows represent how many panes are in that data block.

### 2.3.3 Manage Data Blocks

#### 2.3.3.1 Context Menu

The Context Menu allows you to customize the order of columns in each data block. You can also use the Context Menu to add or remove columns from a data block.

Work sequence	<• >	Planning complete	↔ Add work step	:

#### Use the Context Menu

- 1. On your data block, click on the **Context Menu** icon.
- 2. Select Choose columns from the drop-down menu.

Qualit	y				• •		P	lanning complete			<ul> <li>Add quality ste</li> </ul>		
		Step †	Description	 Mitigation		Type of inspection	-	Inspector	-	Spec		I&TP	Choose columns
Ŧ	1	1	Torque Inspection										Pop out to new windo
Ŧ	1	2	New quality item 2										Close

3. On the resulting slide out panel, search by name or category for a column. Then, select your **column** from the list and click on the **right arrow** to add that column to your data block on the right.

(i) 105091 (Steel Tra	iining Job) 🔹 Plan 👻	v	Vork packaging 👻

										<b>^</b>
									Cancel	Done

- TIP You can also drag and drop columns into your data block. Once in your data block, you can reorder columns by dragging and dropping.
- 4. Repeat step three as needed. When finished, click Done.

NOTE Each type of data block has its own unique default settings. Default settings include specific locked columns and total number of columns and panels.

#### 2.3.3.2 Resource Button

Uniquely named for each data block, the Resource Button allows you to add information or resources to your data block.

#### 2.3.3.3 Daily Plan Icon

The Daily Plan icon is a shortcut that allows you to create daily plans directly from an IWP by selecting which details to include in a daily plan.

		Step 🎓 👘	Description -	Hold point
Ŧ	1	1	Torque Inspection	Yes
Ŧ	1	2	New quality item 3	
Ŧ	1	3	New quality item 2	

Clicking on this icon will open a slide out panel to the right where you can view the items you've selected to include in your daily plan and continue onto the creation window.

1							OVERVIEW	١	VORKSPACE	CONSTRAINT M	ANAGEMENT	DOCUMENTS		Create daily plan

Delete	e an it	-	selecting it t	hen	clicking on	the i	ed "x"	to the	right.	

#### 2.3.3.4 Pin Icon

The Pin icon allows to flag critical components that will hold up the start of the operation if not addressed. When pinned, an item will automatically appear under the Constraint Management tab of the Work plans/packages page. There, you can review and further manage all pinned items.

Quali	ty						<••
		Step †	Ŧ	Description	-	Mitigation	-
Ŧ	1	1		Torque Inspection			
Ŧ	1	2		New quality item 2			

Nork	sequence			• > 🔳 Pla	nning complete	•	Add work step

Ŧ	∰ 3	Bolt and torque	FÛ					
Ŧ	<u>∥</u> 4	Quality inspection	ŦÛ					$\otimes$
Ŧ	5	Turnover	<b>+</b> 0					$\otimes$

• Notice that when you pin an item, the data block row turns blue

ining Job) 👻 F	Plan 👻 Work packaging 👻					0	Ų.	8 💿
Work packaging > North >	CWP- North Area Steel Erection >	IWP- Steel Erection - Module 0						
		OVERVIEW	WORKSPACE	CONSTRAINT MANAGEMENT	DOCUMENTS			
Constraint management					Planning complete	<ul> <li>Add constraints</li> </ul>		
Constraint management Item number	Description	-	Category	😇 Responsibility	Planning complete	-		-
-	Description Bolt and torque	Ŧ	Category Work Sequence	- Responsibility		-		
Item number		Ŧ		∵ Responsibility		ite 👻 Status		-

TIP To unpin an item, go to the Constraint Management tab, and delete the item. Changing the status from "open" to "closed" will not unpin or remove the item from the Constraint Management tab.

NOTE You can also manually add constraints under the Constraint Management tab.

#### 2.3.3.5 Completion Indicator

The Completion Indicator allows you to indicate which data blocks are completely planned.

Quality	< • • >	Planning complete	<ul> <li>Add quality step</li> </ul>	:

As you check off data blocks, you can track your planning progress from the Planning Schedule tab on the AWP panel (Work plans/packages page of Plan Work Packaging).

### 2.4 VIEWSETS

You can create a saved view of your page so that you can always revert to it. This saved view is called a viewset.

#### **Create a Viewset**

- 1. Select the **View** drop-down arrow to save your current view.
- 2. Select Save current viewset as from the viewset drop-down list.
- 3. In the dialog box, type a name.

Save this viewset as		
First Last Preferre	d View	×
	Cancel	Save

4. Click Save.

When making changes to the quantity tracking layout, you will see an **unsaved view** option in the view menu. This lets you know changes have not been saved.

NOTE Each viewset is user-specific and can be used in any plan.

#### 2.4.1 Send a viewset

NOTE Certain permissions are needed to send viewsets to roles.

You can send views to all users that have a certain role. You can also send it to specific projects or full organizations. To send to a project, you must be a user on that project or in that organization.

#### Send a viewset

- 1. Open the viewset you want to share.
- 2. Open the View drop-down list, and then select **Send current view**.
- 3. Select **Users** or **Projects** from the drop-down list, and then search by user name or project. You can add multiple users and projects.
  - NOTE When you share a view with another project, any project-specific fields are not shown in the receiving project. You can select the Share view as global template option.

Search for a user	
Send to	
Users	
No users selected	
Projects	
No projects selected	

Click **Send**. A notification is sent to the selected users and the viewset is available in their dropdown list, along with the sender's name and the date when the viewset was sent.

## 2.5 QUERY BUILDER

The Query builder lets you build queries with multiple conditions to filter the entire table of work packages. You can add, edit, delete, and share queries with others.

ធ / Plan / Work packaging Actions 🔻 🕁 🗄 🗵 Work Packages Work  $\times$ Planning Schedule Queries ▶ E ► E • 🗹 ► E My queries ⊧ E <u>C</u> ► E Cancel 4

To open the Queries slide-out panel, click the Query icon on the left side of the page.

#### 2.5.1 Add a Query

A query is made up of conditions that are made up of columns, values, and operators that connect the columns and operators. Multiple conditions can be grouped as And or Or statements.

The following step by step shows you how to add a query, apply it, and then save it for future use.

#### Add a Query

- 1. Click the **Query** icon on the left side of the page to open the Queries slide-out panel.
- 2. Click the **Add** icon. The Query builder opens.
- 3. Select a column and operator from the drop-down lists.
- 4. Enter a value that you want to filter the column for.
- 5. Optionally, click the **Add** icon to add more conditions, and then click **And** or **Or** to change how the conditions are grouped.
- 6. Click **Apply** to update results immediately.
- 7. Click Save query.

## LESSON 3 – WORK PACKAGE MANAGEMENT

InEight Inc. | Release 24.5

## 3.1 INEIGHT PLAN WORKFLOW - WORK PACKAGE MANAGEMENT

## 3.2 WORK PACKAGE MANAGEMENT OVERVIEW

#### 3.2.1 What is Advanced Work Packaging (AWP)?

Advanced Work Packaging (AWP) is a standardized way to plan the execution of a construction project including design, procurement, and installation. AWP aims to change the planning process to be execution driven: approaching the beginning of your construction project with the end in mind. In the past, planning was siloed, Engineering first, then Procurement, and finally Construction. AWP starts with the priorities of Construction and or commissioning and works backwards.

The Work Packaging module of InEight Plan provides an organized platform to break down your project into manageable scopes of work. Work packages can be developed to include all items necessary to complete the scope as well as all constraints that would impede progress.

#### 3.2.2 Work Packages

There are three levels of work package definition that can be used in InEight Plan:

- Construction Work Area (CWA)
- Construction Work Package (CWP)
- Installation Work Package (IWP)

#### Scenario

Imagine you are working on a project with the following scope: 30 modules in which you need to complete earthwork, foundations, and erect the steel support structures.

Using the scenario above as an example, assume that you initially break the project into two construction work areas (CWA): North Area and South Area. You break each area of work into three different construction work packages: Earthwork, Foundation, and Steel Erection. From there, you can break each construction work package into multiple installation work packages so you can plan at a detailed level and identify the specific constraints, components, safety and quality risks.

TIP Construction work areas (CWAs) are created for the project or organization in the Configure CWA and project values page prior to defining construction work packages.

#### 3.2.2.1 Construction Work Package (CWP)

A construction work package (CWP) defines a logical and manageable division of work within the construction scope. CWPs are aligned with the project execution plan (which includes the construction plan) and the WBS. The division of work is defined such that CWPs do not overlap within a discipline. CWPs are to be measurable and in alignment with project controls. CWPs are the basis for the development of detailed installation work packages. They should also align with engineering and procurement work packages. A typical CWP includes the following:

- Safety requirements
- At least one EWP
- Schedule
- Budget (work hours/cost/productivity)
- Environmental requirements
- Quality requirements
- Special resource requirements

A CWP can also contain activity, material, and contract components.

A CWP may be divided by area, system, or as otherwise determined by the project (construction) execution plan. In general, it is better to develop CWPs by discipline. A large project will likely contain multiple CWPs. CWPs can be the basis of contractual scopes of work. A contractual scope may contain more than one CWP. Complete specifications of CWPs grow over time to include productivity factors, detailed cost reports, and other considerations.

#### 3.2.2.2 Installation Work Package (IWP)

An installation work package (IWP) is the deliverable that enables a construction work crew to perform work in a safe, predictable, measurable, and efficient manner. An IWP is scoped to be manageable and "progressable"; it is typically of limited size such that a crew can complete the work in about a week. An IWP contains the necessary documentation supporting workface execution. IWPs should be approved by the responsible stakeholders, and all constraints should be completed before issuance to the field. A typical IWP includes the following:

- Work package summary inclusive of description of work, location, system or facility code, originator, contact information, sequenced work steps, reference documents, estimate of work hours and quantities, cost codes, witness or hold points, and special comments quantity work sheet
- Safety hazard analysis, specific to tasks in work package
- Material Safety Data Sheet
- Drawings (engineering and vendor design)
- Specifications (engineering and vendor design)
- Change documents (i.e., field change request, deficiency report/non-conformance report and design change notice)
- Manufacturer's installation instructions model shots
  - Bills of Materials
  - Required tools
  - Installation test results forms
  - As-built documentation
  - Inspection checklists
  - Completion verification signatures

All elements necessary to complete the scope of the IWP should be organized and delivered before work is started. As the originator, you should cover the work with the responsible safety, quality,

superintendent, and craft personnel in a preparatory meeting, with special focus on anticipated constraints.

Generally, the scope of work associated with the IWP should be small enough that it could be completed by a single foreman and crew within a pre-defined block of work hours. Work hour blocks should be between 500 and 1,000 hours. An IWP contains all applicable and pertinent documents in support of safe and efficient installation of a specific portion of a system by a given trade. These documents are written specifically for the crew performing the activity.

## 3.3 WORK PACKAGE CREATION

The first step in utilizing the Work Packaging module is to set up your work package structure.

#### 3.3.1 Create a Construction Work Package (CWP)

The following steps walk you through creating a construction work package.

#### Create a Construction Work Package (CWP)

1. From your project's home page, navigate to the **Work packaging module**.

	Application	ns							Quantity tracking	
Add project image	() Model		🚯 Estimate 🛛 🖨	In Plan	(6) Contract	is and forecasts			Build components and document quant	tities
Ado project image	🖲 Docur	nent	Control	Quantity tracking Work packaging	🖉 Change		La	unch		Launch
plications	(i) Sched	lule		Compliance					& Links	
Model	Project				Extensions	r your crew			Organization	
) Schedule	Project ho		Assigned users		Design		La	unch	InEightU	
) Estimate	Project de Settings	tails	Operational rate codes Assigned operational re	sources	Billing				Test567Test567Test567Test567Test567Test567Tes MahendranMahendranMahendranMahendra	
Reports	Workflows	5	Assigned disciplines an				Expiring		Manendranmanendranmanendran	
Explore Dashboards						0	0	۲	TEST 124 Project	
API documentation									Project	
Control		Contract	S		Change st	atus			@ Prime contract summary	
Workspaces		Status		Count	Closed	In Pro Active			Actual values	
Project library		Executed Non-executed			Issue				Original contract	\$0.00

	Unassociated packages

3. Click on the Add icon on the left toolbar and select Construction work package - CWP from the drop-down list.

Work Packages	Actions 🔻 🛨 🔃 🗵	
Planning Schedule	Construction work package CWP	Description
-	Installation Construction work pa	North
	C South	South
	Unassociated packages	

TIP Construction work packages and installation work packages can also be created within the construction work areas, for example the North construction work area, by clicking on the North construction work area folder then select the add button.

4. In the new dialog box, name your CWP. Work package names can be 100 characters in length.

Add CWP CWP name CWP- North Area Steel Erection Work Plan - XXX
CWP- North Area Steel Erection Work Plan - XXX
Cancel Add

NOTE Note that the CWP name automatically begins with "CWP-" by default. You can erase it.

5. Click Add.

**NOTE** Your created CWP will be located in the **Unassociated packages** folder by default when you create them outside of a construction work area folder.

合 Steel Structure Tra	ining J	lob (1050	191) 👻 Plan 👻 Work packaging 👻

#### 3.3.2 Edit Work Packages

After creating the work package, you might need to go in and edit the details. This includes:

- Schedule start and finish dates
- Planning start and end dates
- CWP Description
- CWA description and ID
- Plan Status
- Other fields

#### Edit a Work Package

1. From the Work plans/packages page, select the **hyperlink ID** on your newly created package.

合 Steel Structure	e Training	Job (1050	191) 🝷 Plan 👻 Work packaging 👻
Work Packages	A	Actions 🔻

			🖌 🗁 Unassociated packages
			Description of the second seco
			🗊 <u>IWP-mn,n</u> 5
			I CWP-hkh 4

- 2. Select the Construction Work Package Overview tab.
- 3. Under CWP description, enter a description.
- 4. In Scheduled start date, select a date.
- 5. In Scheduled end date, select a later date.
- 6. Select an Engineer.
- 7. Select a Planner.
- 8. Select a Superintendent.

The Engineer, Superintendent, and Planner fields are validated fields and will bring up a list of people from which to select, once you enter a character.

tal man hours: 70									

9. Now that you have all the CWP overview details, you can go back to the Work plans/packages page by selecting **Work packaging** in the breadcrumbs.

Work Packages	Work packaging > CWP- North Area Steel Erection
CWP- North Area Ste 90982 Work package for the	CWP ID 90982

#### 3.3.3 Copy Work Plans

You might need to create the exact same work package for a new area with only a few small changes. Instead of repeating the entire process of creating a new work package, your best choice would be to create a work plan from an already existing one, making the few small changes as necessary.

#### Copy a Work Package

1. On the Work plans/packages page, select your previously created work plan, then select the **Copy** icon.

Work Packages	A	ctions 🔻	⊕ 🗔 ⊗ 🖬 🗉	
Planning Schedule	-		♦ Work package name = ID	- Description

#### 3.3.5 Engineering work package (EWP)

An engineering work package lets you link engineering schedules created in InEight Design to a CWP, so you can quickly see the schedule without exiting Plan. You can add an EWP from the Work Packages overview page. This option is enabled only when Plan is integrated with Design.

To add an EWP, select the **Add** icon in the Work packaging menu, and then select Engineering work package-EWP.

#### 3.3.6 Group Work Packages

After creating work packages, you can group them under the plans you have created. This helps with the organization and planning of the work.

#### Group a Work Package

1. On the Work plans/packages page, select a work package.

2. Click the Move into CWP icon.

	ng Job (105091) 👻 Plan 👻 Work packaging 🕤	•
Work Packages	Actions 🔻 (+) [+ (😣 🧾 💷	
Planning Schedule		Ŧ
	North	
	C P CWP-North Area S 9	
	South	
	🗌 🔺 🗁 Unassociated packages	
	✓ III IWP-Steel Erectio 12	
	CWP-North Area S 11	

TIP You can also group installation work packages into construction work packages by clicking anywhere in the row for the installation work package and dragging it over top of the desired construction work package.

3. In the Move into CWP dialog box, start typing the name of your construction work package.

Move into CWP
Work plan name
Steel ×
CWP- North Area Steel Erection Work Plan - XXX
CWP- South Area Steel Erection Work Plan - XXX
Cancel

- 4. Select the CWP you want to move it to, then click **Move** to move the package to finish grouping your packages.
  - TIP You can also group construction work packages into construction work areas by editing the CWP in the Construction Work Package Overview tab, then selecting the appropriate CWA ID or CWA Description from the drop-down.

#### 3.3.7 Link activity components

The activity components can be managed in both the Quantity Tracking and Work Packaging modules. To link the components, click the **Edit** icon in the ITP's column.

#### 3.3.7.1 Daily plan creation with all linked project values

You can select multiple records with linked project values, so you can see all available data points. This selects all the eligible data from an IWP that can be used in an InEight Progress daily plan.

To create a daily plan with all linked projects values, select a work package, and then go to the Workspace tab. Click the **Create daily plan with all available data** icon, and then create a daily plan

#### with all available data.

# 3.4 DAILY PLAN FROM WORK PACKAGE (DAILY PLAN WIZARD)

#### Scenario

Tomorrow, your crew will be starting the steel erection work on your module. You are now ready to plan the work for your crew. During this first day, you want your crew to install the A7 connections to foundations. Your crew will consist of a Grove-RT880E crane, 3 Ironworkers and 1 Laborer. You want to make sure to communicate the work to your crew and identify safety concerns for the day.

In this topic, you will create a daily plan from an already existing work package using the Daily Plan Wizard in the InEight Plan web application.

#### 3.4.1 What is a Daily Plan?

After you put your work package together, you break it down into daily segments, or the work you plan to accomplish in a given day.

Using the scenario above as an example, your steel erection work package for your module will take multiple days to complete. You will use daily planning to plan the work in the sequence you are looking to do it in, day by day. Daily planning is a good tool to communicate to your crew your safety concerns, quality and environmental risks, and expected productivity.

Daily planning combines:

- Components
  - Activity components
  - Material components associated with WBS
- Resources (employees, and equipment)
- Planned hours
- Planned quantities
- Notes/Issues
- Attachments (for example, safety notes, plan specifications)

#### 3.4.2 Daily Plan Wizard

The Daily Plan Wizard is a powerful tool that can help automate the process of setting up daily plans by copying information from an already existing work package to avoid duplicate work. The Daily Plan Wizard allows you to choose which parts of the work package will be brought into the daily plan.

You access the Daily Plan Wizard from Plan Work packaging module.

	Title	Description
1	Plan Date	The date on which the plan will be executed.
2	Plan Name	Unique name of the daily plan.
3	Shift	A drop-down field where you can select either the Day or Night Shift.
4	Work Plan/Package ID-	This should be auto populated with the name of the

	Title	Description
	Name	work plan/package that the current daily plan is being created from.
5	Planner Notes	A free text field where you can add any relevant notes.
6	Location	A free text field where you can enter the location where the work will be performed.
7	Approvers (1 required)	Responsible for the approval of the plan.
8	Executors (1 required)	Responsible for the execution of the plan.
9	Navigation Buttons	Allows you to either cancel or create the new daily plan.

#### Overview – Daily Plan Wizard (continued)

* Plan date	* Plan name		
1	□ 2		
Shift	Work plan/package ID - Name	Planner notes	
Day Shift	· 4	5	
Location	-	-	
	Hint type "123" or "Site"		
* Approvers (1 Required)			
No approvers added			
+ Add approver			
* Executors (1 Required)			
No executors added			
+ Add executor			

The following Step by Step walks you through how to use the Daily Plan Wizard.

NOTE This Step by Step assumes you already have a work package (CWP or IWP) created containing work package details (e.g., labor, equipment, components, safety). See <u>Work</u> <u>Package Creation</u> for details on setting up work packages.

#### Create a Daily Plan Using the Daily Plan Wizard

1. From your project home page, navigate to Plan > **Work packaging**.

# **3.5 INSTALLATION WORK PACKAGE DETAILS**

Installation work packages include the details of a group of activities. The details in the work package include installation sequence, components, labor, equipment, safety and quality concerns, and other aspects of the work package. When ready to share, you can attach external files and send to print as a PDF. Or, if you are integrated with InEight Document, you can easily send packages and documents.

You can also create a daily plan in InEight Progress from a work package. For more information, see Daily Plan from Work Package.

## 3.5.1 Work Package Overview Tab

When you open an installation work package from the Work plans page, the Overview tab is like the construction work package Overview tab, but you can define settings specific to the installation work package. For example:

- The engineer may be different for this particular package and might report to a different engineer than assigned at the CWP level
- The IWP's start and end dates might also be a smaller time period than the CWP's schedule start and finish dates
- TIP You can also edit IWP fields from the grid view of the parent construction work package. From the Work packages tab of a construction work package, you can click in fields in the grid, and then type or select values instead of opening each installation work package to change values.

#### **Installation Work Package Overview**

- 1. On the Work plans/packages page, select the **hyperlink ID** of your installation work package.
- 2. In the Overview tab of your installation work package, enter a description in the Description field.
- 3. From the drop-down list in the Discipline field, select a discipline.
- 4. For Type of work, input short description.
- 5. From the drop-down list in the Risk field, select a risk level.
- 6. Select a Start and End date.
- 7. Select a Planner.
- 8. Select a Superintendent.
- 9. Select an Engineer.
- 10. Select an Executor.

## 3.5.2 Installation Work Package Workspace Tab

The Workspace tab is where the majority of your planning is accomplished. Here you can enter the planned labor, materials, equipment, components, among other aspects of the plan. You enter these details using data blocks. Some data blocks are open entry fields, such as safety, environmental, and work sequence. However, other data blocks use validated fields based off previously entered information. These include Budget, Component, and Equipment data blocks.

- NOTE The Labor data block is an open entry field, unless you enter an actual labor resource.
  - TIP You can track materials assigned as constraints in work packages by integrating with Intelliwave. See Enable external material tracking integrations for more information.

#### Installation Work Package Workspace

- 1. On the Work Packages tab of the Work plans/packages page, select the **hyperlink ID** of your installation work package.
- 2. From the Installation work package page, select the **Workspace** tab.

Work packa	aging > North > CWP- North Area Steel Erection >	IWP- Steel Erection - Module 0			
÷		OVERVIEW	WORKSPACE	CONSTRAINT MANAGEMENT	DOCUMENTS

3. Select the **View menu** and change your view to your previously created viewset (see *General Navigation*).

	View: Work Par	ckaging 🔻
+ Add equipment	Add equipment from resource	25
Permit expires	- Quantity	-
		*

4. In the **Work sequence** data block, add work sequence steps by clicking on the **Resource** button and enter details for your project.

Ê			ov	ERVIEW	WORKSPACE	CONSTRAINT MANAGE	EMENT DOCUMENTS			View: Work Packaging	-

4	Quality inspection	<u>+0</u>	None	
5	Turnover	F=0	No	

5. In the Labor data block, add labor by clicking **Add labor from resources** and enter details for your project.

6. In the new dialog box's Project Resources tab, search for employee names and click the **Add** icon and enter details for your project.

Add la	abor from project resou	urces						
		PROJECT RES	SOURCES ESTIMATE/CONTROL RESOURCES					
Availa	able employees in project :							
	Employee ID	-	Name	7	Trade	7	Craft level	Ŧ
$\odot$	00020111		Jack Spooner		Pipe Workers		Pipefitter Journeyman	A

- TIP You can search based off any of the fields associated to the employee (e.g., Employee ID, Trade).
- NOTE You can add multiple employees at a time in this dialog box. Only employees who can be added to daily plans will show up in the drop-down selection See your Account Administrator if you do not see an employee.
- NOTE You can also add generic labor from assigned WBSs in the Estimate/Control Resources tab. You must first add a component associated with the appropriate WBS to the IWP.
- 7. In the Equipment data block, add equipment by selecting **Add equipment from resources** and enter details for your project.

- NOTE You can also add generic equipment from assigned WBSs in the Estimate/Control Resources tab. You must first add a component associated with the appropriate WBS to the IWP.
- 8. In the Activity Components data block, add equipment by clicking **Add Activity components by WBS** and then entering details for your project.

- NOTE A component can only be present in one package at a time. It cannot be in both the CWP and its child IWP due to percent complete tracking purposes.
- NOTE If the work package is assigned to a work area, the activity component's location is updated to the work area in Quantity tracking and can no longer be changed in that module.
- 9. In the Safety data block, add steps by clicking **Add safety step** and enter details for your project.

Safety			< •	• >	(+) Add s	safety ste	ep
Step	 Description	 Safety risk	17	Mitigation	 Required safety items	1	
1	Crush Points						$(\mathbf{x})$

10. On the Breadcrumbs bar, select **Work packaging** to go back to the Work plans/packages page and view your completed work plan and work package.

## 3.5.3 Installation Work Package Constraint Management Tab

In the Constraint Management tab, you can review items pinned in the Workspace tab or manually add new constraints. For more information, see <u>Constraint Management</u>.

## 3.5.4 Installation Work Package Documents Tab

Add, edit, and share IWP documents from the Documents tab. As documents are updated, get the latest information by looking for the revision number, modifier, and date of modification.

You can add attachments to the Lesson learned, Quality forms, Temporary structures, and Work sequence data blocks from the Workspace tab. These additions show in the Documents tab.

NOTE You must click Generate package for the package to show in Document . When you delete the package in Document, the Generate package button is enabled in Plan.

#### 3.5.4.2 Linked Document Package

If a work package is integrated with an InEight Document package, a link is now provided to the Document package.

On the Documents tab of a work package, a link to the associated Document package is shown at the top of the page. Click the link to open Document to the associated package.

### 3.5.4.3 Define Revision for IWP report

The Revision option in the Work package report lets you select the revision. This automatically updates to the next revision if the one selected is not available. You can also manage revisions in InEight Document. The Revisions shown in the drop-down list are the ones available from the project.

# 3.6 WORK PACKAGE IMPORT AND EXPORT

# 3.6.1 Import Template

Creating and copying work packages can be time consuming. You can use an Excel import template to upload multiple work packages with their overview information already populated.

### **Create Work Packages from Excel Import**

1. On the Work plans/packages page, click on the **Export** icon, and select to export **With Data** and open the export file.

TIP Excel templates without data are used for creating new components from scratch, usually during project setup.

Excel templates with data are typically used to update existing work plans/packages.

- 2. Open the export file.
  - This opens up the Excel template to use for the import. It also contains the data from the current work packages on the Work plans page
  - You may need to select Enable editing at the top of the spreadsheet prior to entering data

A	B	C	D	E	F	G
1 English	User Selected Language					
REQUIRED	Field is required for import					
OPTIONAL	Field is optional for import					
VALIDATED	Field must match master data available in ap	plication				
IGNORED	Field not to be populated					
Name	Package Type	Description	ID	CWP ID	Schedule ID	Scheduled start

## **3.6.2 Export to Another Project**

The following Step by Step shows you how to export some or all of a work package to another project.

#### 3.6 Step by Step 1 — Export Work Package to Another Project

- 1. Select a work package.
- 2. Click the **Export** icon, and then select **To other project** from the drop-down list.
  - · The Export work packages dialog box opens
- 3. Select a destination project, and then click **Next**.

NOTE You must have permission to create work packages in the destination project to export to that project.

- 4. Select the pages and individual data blocks you want to export.
  - NOTE
     The Documents page is shown in the dialog box but cannot be selected to copy.

     NOTE
     You can only export data that is entered as free text. You cannot export project-specific data such as components.
- 5. Click **Export**.

# **3.6.3 Import from Another Project**

The following Step by Step shows you how to import some or all of a work package from another project.

## 3.6 Step by Step 2 — Import Work Package from Another Project

1. Select a work package.

NOTE You must have permission to create work packages in the destination project to import into that project.

- 2. Click the Import icon, and then select From other project from the drop-down list.
  - The Import work packages dialog box shows
- 3. Select an origin project, and then click **Next**.
- 4. Select origin work packages, and then click Next.

NOTE You can import from multiple work packages at the same time.

5. Select the pages and individual data blocks you want to import.

NOTE The Documents page is shown in the dialog box but cannot be selected to copy.

- NOTE You can only import data that is entered as free text. You cannot import project-specific data such as components.
- 6. Click Import.

# **3.7 CONSTRAINT MANAGEMENT**

This topic describes the Constraint Management tab of an installation work package (IWP).

## 3.7.1 Summary

You can define constraints on a work package's completion in several ways and manage all of them on the Constraint Management tab. Constraints can be added manually or by pinning items from the IWP Workspace tab.

Work	p > IWP-d											🖨 Print Repo
				OVERVIEW	WORKSPAC	E CO1	ISTRAINT MANAGEMENT	DOCUME	NTS			
)												Planning complete
	Item number	Name / ID	-	Description	- Category	-	Responsibility	- Due date	-	Expected date	- Notes	Status
-	001	1005		Erect Steel - Light	Components			10/15/202		10/15/2021	•	(O Open

Constraints are organized into categories, most of which correspond to the data blocks of the Workspace tab:

- Equipment
- Materials
- Budget
- Components (activities)
- Lessons Learned
- Quality Forms
- Work Sequence
- Tools
- Temporary Structures
- Labor
- · Quality
- Safety
- Environmental
- Contract Components
- Work packages

Each constraint can be assigned to a responsible party and given due dates, expected dates, and notes. Constraints have a status of either Open or Closed and can be changed to show whether they are resolved or not.

## 3.7.2 Considerations

- Some constraints, such as work packages, can have their status automatically updated. When a work package tagged as a constraint has a status of Construction complete, its related constraint's status changes to *Closed*.
- You can track materials assigned as constraints in work packages by integrating with Intelliwave. See Enable external material tracking integrations for more information.

- If you pin a material component as a constraint, associated notes on the Constraint management tab can contain notes sent from Intelliwave.
- Each note is limited to 500 characters and does not support any special formatting.

## 3.7.3 Add a constraint

You can add constraints manually in the Constraint Management tab or by pinning them in the Workspace tab.

### 3.7 Step by Step 1 — Manually add a constraint

- 1. Open an IWP.
- 2. Click **Constraint Management** at the top of the page.
- 3. Click the **Add** icon in the upper left of the table. A new constraint is added with the Item number column automatically filled in.

					OVERVIEW		WORKSPACE	CON	STRAINT MANAGEMEN	π	DOCUMENTS						
۲	8														_ r	Planning complet	te
	Item number †	- Category	$\overline{\tau}$	Name / ID	7	Description		7	Responsibility		Due date	Expected da	ite 🗉	Notes		Status	Ŧ
	001	Work package		123	×									•		$( \bigcirc )$	-
				47771 - IWP-RAC-02-1	23 ^												
				47923 - IWP-RAC-03-12	23												
				48123 - IWP-UGE-03-24	۰ .												

- 4. Click in the blank field under the Category column, and then select a category from the dropdown list.
- 5. Type a name under the Name / ID column.

**NOTE** If you select Work package as the category, the Name / ID field searches for work packages with matching names or IDs in your project.

6. Enter additional information in the remaining fields, as necessary.

### 3.7 Step by Step 2 — Pin a constraint from Workspace

- 1. Open an IWP.
- 2. Click **Workspace** at the top of the page.

- 3. Select the check box next to the data block that you want to open.
- 4. Click the **Send as Constraint** icon on the left side of the data block for the record you want to pin as a constraint. The record is added to Constraint Management as a constraint.

5. Open the **Constraint Management** tab, and then fill out additional fields for the new constraint, as necessary.

### **Exercise 3.1 — Enter Work Package Details**

Now that you have learned to create work packages and fill out all details, create your own construction work package (CWP) and installation work package (IWP) using the method you prefer. Make sure to fill out all details for your installation work package.

- 1. Include at least one safety item.
- 2. Include at least two components.
- 3. Include at least two labor resources.
- 4. Include at least two pieces of equipment.

# Congratulations, you have completed this exercise!
